## Current Industrial Reports

Current data are released electronically on Internet for all individual surveys as they become available. Use: <http://www.census.gov/mcd/>. Individual reports can be accessed by choosing "Current Industrial Reports (CIR)," clicking on "CIRs by Subsector;" then choose the survey of interest. Follow the menu to view the PDF file or to download the worksheet file (XLS format) to your personal computer.

These data are also available on Internet through the U.S. Department of Commerce and STAT-USA by subscription. The Internet address is: [www.stat-usa.gov/](http://www.stat-usa.gov/). Follow the prompts to register. Also, you may call 202-482-1986 or 1-800-STAT-USA, for further information.

### SUMMARY OF FINDINGS

In 2006, steel mill product manufacturers had shipments of \$94.2 billion, which increased 13.9 percent from \$82.7 billion in 2005. Steel ingot and semifinished shapes shipments

increased 24.2 percent, from \$6.9 billion in 2005 to \$8.5 billion in 2006. Hot-rolled sheet and strip, including tin mill products shipments increased 10.6 percent, from \$26.8 billion in 2005 to \$29.6 billion in 2006. Hot-rolled bars and shapes, plates, structural shapes, and piling shipments increased 18.1 percent to \$20.8 billion in 2006, from \$17.6 billion in 2005. Steel pipe and tube increased 6.1 percent, from \$11.3 billion in 2005 to \$12.0 billion in shipments in 2006. Cold-rolled steel sheet and strip shipments increased to \$15.3 billion in 2006, from \$13.4 billion in 2005, a 13.9-percent increase. Cold-finished steel bars and bar shapes shipments decreased 4.3 percent to \$2.2 billion in 2006, from \$2.3 billion in 2005. Steel wire shipments decreased 2.2 percent, from \$2.3 billion in 2005 to \$2.2 billion in 2006. All other steel mill product shipments remained unchanged at \$2.2 billion in 2006.

For general CIR information, explanation of general terms and historical note, see the appendix.

Address inquiries concerning these data to Primary Goods Industries Branch, Manufacturing and Construction Division (MCD), Washington, DC 20233-6900, or call Madelyn Nieves, 301-763-4767.

U.S. CENSUS BUREAU

Table 1. Value of Shipments of Steel Mill Products by Class of Products: 2006 and 2005  
 [Value in thousands of dollars]

Product class code	Product description	2006	2005
	Total.....	94,197,970	r/ 82,711,805
3311113	Steel ingot and semifinished shapes.....	8,522,836	r/ 6,862,356
3311115	Hot-rolled sheet and strip, including tin mill products.....	29,613,563	r/ 26,784,198
3311117	Hot-rolled bars and shapes, plates, structural shapes, and piling.....	20,784,629	17,598,259
331111L	Other steel mill products (except wire products).....	910,894	r/ 798,901
3312100	Steel pipe and tube.....	11,985,806	11,297,090
3312211	Cold-rolled steel sheet and strip.....	15,302,383	13,429,775
3312213	Cold-finished steel bars and bar shapes.....	2,182,996	r/ 2,281,647
3312221	Noninsulated ferrous wire rope, cable, and strand.....	628,882	r/ 627,457
3312223	Steel nails, staples, tacks, spikes, and brads.....	118,842	189,294
3312225	Steel wire, including galvanized wire and other coated wire.....	2,225,002	2,275,413
3312227	Steel fencing and fence gates.....	182,433	r/ 194,037
3312229	Ferrous wire cloth and other ferrous woven wire products.....	36,745	r/ 42,952
331222B	Other fabricated ferrous wire products (except springs).....	348,872	r/ 330,426
331111D	Cold-rolled steel sheet and strip, made in steel mills producing hot-rolled sheet or strip.....	(D)	(NA)
331111F	Cold-finished steel bars and bar shapes, made in steel mills producing hot-rolled bars and bar shapes.....	-	(NA)
331111B	Steel pipes and tubes, made in steel mills producing semi-finished shapes or plate.....	(D)	(NA)
3311119	Steel wire, including galvanized and other coated wire, made in steel mills producing wire rods or hot-rolled bars.....	(D)	(NA)

D Withheld to avoid disclosing data for individual companies. NA Not available. r/Revised by 5 percent or more from previously published data.

Table 2. Production of Raw Steel: 2006 and 2005  
 [Thousands of metric tons]

Product description	2006	2005
Total.....	87,045	82,584
By grade of steel:		
Carbon.....	77,143	72,935
Alloy.....	8,296	7,856
Stainless.....	1,606	a/r/ 1,793
By type of furnace:		
Electric.....	45,053	41,914
Basic oxygen, open hearth, and other types of furnaces.....	41,993	40,670

r/Revised by 5 percent or more from previously published data.

Note: Percent of estimation of each item is indicated as follows: a/10 to 25 percent of this item is estimated.  
 b/26 to 50 percent of this item is estimated. c/Over 50 percent of this item is estimated.

Table 3. Shipments of Steel Mill Products: 2006 and 2005  
 [Quantity in metric tons. Value in thousands of dollars]

Product code 1/	Product description	No. of cos.	Total shipments 2006			Total shipments 2005		
			Quantity	Value f.o.b. plant 2/		Quantity	Value f.o.b. plant 2/	
	Cold-finished round wire:							
33122251E0	Under 0.75 mm in diameter.....	9	12,438	94,186	b/	10,830	b/	77,623
33122251F0	0.75 mm to under 1.5 mm in diameter.....	8	2,302	24,516		2,520	b/	21,754
33122251G0	1.5 mm and above in diameter.....	14	b/ 17,427	a/ 85,372	b/r/	18,677	r/	90,626
33122251H0	Other shape wire, including flat wire.....	10	a/ 2,133	a/ 24,831		1,984	a/	20,647

- Represents zero. D Withheld to avoid disclosing data for individual companies. NA Not available. r/Revised by 5 percent or more from previously published data.

1/Product codes in product class 3312225 also include products in the 3311119 product class; same applies for product classes 3312211 and 331111D; 3312213 and 331111F; and 3312100 and 331111B.

2/The value represents the net sales price, f.o.b. plant, to the customer or branch to which the products are shipped, net of discounts, allowances, freight charges, and returns.

Note: Import receipts of steel mill products for 2006 are as follows: total, 6,242,760 metric tons; carbon, 5,749,781 metric tons; alloy, 406,084 metric tons; stainless, 87,053 metric tons. Import receipts of steel mill products for 2005 are as follows: total, 6,084,312 metric tons; carbon, 5,510,972 metric tons; alloy, 516,777 metric tons; stainless, 56,563 metric tons.

Quantity data converted to metric tons; therefore, detail may not add to total because of rounding. Percent of estimation of each item is indicated as follows: a/10 to 25 percent of this item is estimated. b/26 to 50 percent of this item is estimated. c/Over 50 percent of this item is estimated.

1/Refer to Table 3 for the total quantity shipments detail.

2/For a comparison of North American Industry Classification System (NAICS)-based product codes with Schedule B export codes and HTSUSA import codes, see Table 6.

3/Source: Census Bureau report EM 545, U.S. Exports.

4/Source: Census Bureau report IM 145, U.S. Imports for Consumption.

5/Dollar value represents the c.i.f. (cost, insurance, and freight) value at the first port of entry in the United States plus U.S. import duties.

6/Apparent consumption is derived by subtracting exports from the total manufacturers' shipments plus imports.

Note: Quantity data converted to metric tons; therefore, detail may not add to total because of rounding.

Table 6. Comparison of North American Industry Classification System (NAICS)-Based Product Codes with with Schedule B Export Codes and HTSUSA Import Codes: 2006

## General CIR Survey Information, Explanation of General Terms and Historical Note

---

### GENERAL

The CIR program has been providing monthly, quarterly, and annual measures of industrial activity for many years. Since 1904, with its cotton and fats and oils surveys, the CIR program has formed an essential part of an integrated statistical system involving the quinquennial economic census, manufacturing sector, and the annual survey of manufactures. The CIR surveys, however, provide current statistics at a more detailed product level than either of the other two statistical programs.

The primary objective of the CIR program is to produce timely, accurate data on production and shipments of selected products. The data are used to satisfy economic policy needs and for market analysis, forecasting, and decision making in the private sector. The product-level data generated by these surveys are used extensively by individual firms, trade associations, and market analysts in planning or recommending marketing and legislative strategies, particularly if their industry is significantly affected by foreign trade. Although production and shipments information are the two most common data items collected, the CIR program collects other measures also such as inventories, orders, and consumption. These surveys measure manufacturing activity in important commodity areas such as textiles and apparel, chemicals, primary metals, computer and electronic components, industrial equipment, aerospace equipment, and consumer goods.

The CIR program uses a unified data collection, processing, and publication system. The U.S. Census Bureau updates the survey panels for most reports annually and reconciles the estimates to the results of the broader-based annual survey of manufactures and the economic census, manufacturing sector. The manufacturing sector provides a complete list of all producers of the products covered by the CIR program and serves as the primary source for CIR sampling. Where a small number of producers exist, CIR surveys cover all known producers of a product. However, when the number of producers is too large, cutoff and random sampling techniques are used. Surveys are continually reviewed and modified to provide the most up-to-date information on products produced. The CIR program includes a group of mandatory and voluntary surveys. Typically the monthly and quarterly surveys are conducted on a voluntary basis. Those companies that choose not to respond to the voluntary surveys are required to submit a mandatory annual counterpart corresponding to the more frequent survey.

### NORTH AMERICAN INDUSTRY CLASSIFICATION SYSTEM (NAICS), 1997

The adoption of the North American Industry Classification System (NAICS) in the 1997 Economic Census has had a major impact on the comparability of current and historic data. Approximately half of the industries in the manufacturing sector of NAICS do not have comparable industries in the Standard Industrial Classification (SIC) system that was used in the past.

While most of the change affecting the manufacturing sector was change within the sector, some industries left manufacturing and others came into manufacturing. Prominent among those that left manufacturing are logging and portions of publishing. Prominent among the industries that came into the manufacturing sector are bakeries, candy stores where candy is made on the premises, custom tailors, makers of custom draperies, and tire retreading. The net effect of the classification changes are such that if the 1997 value of shipments data for all manufacturers were tabulated on an SIC basis, it would be approximately 3 percent higher.

Listed below are the NAICS sectors:

- 21 Mining
- 22 Utilities
- 23 Construction
- 31-33 Manufacturing
- 42 Wholesale Trade
- 44-45 Retail Trade
- 48-49 Transportation and Warehousing
- 51 Information
- 52 Finance and Insurance
- 53 Real Estate and Rental and Leasing
- 54 Professional, Scientific, and Technical Services
- 55 Management of Companies and Enterprises
- 56 Administrative and Support and Waste Management and Remediation Services
- 61 Educational Services
- 62 Health Care and Social Assistance
- 71 Arts, Entertainment, and Recreation
- 72 Accommodation and Food Services
- 81 Other Services (except Public Administration)

(Not listed above are the Agriculture, Forestry, Fishing, and Hunting sector (NAICS 11), partially covered by the census of agriculture conducted by the U.S. Department of Agriculture, and the Public Administration sector (NAICS 92), covered by the census of governments conducted by the Census Bureau.)

---

The 20 NAICS sectors are subdivided into 96 subsectors (three-digit codes), 313 industry groups (four-digit codes), and, as implemented in the United States, 1170 industries (five- and six-digit codes).

## FUNDING

The Census Bureau funds most of the surveys. However, a number of surveys are paid for either fully or partially by other Federal Government agencies or private trade associations. A few surveys are mandated, but all are authorized by Title 13 of the United States Code.

## RELIABILITY OF DATA

Survey error may result from several sources including the inability to obtain information about all cases in the survey, response errors, definitional difficulties, differences in the interpretation of questions, mistakes in recording or coding the reported data, and other errors of collection, response, coverage, and estimation. These nonsampling errors also occur in complete censuses. Although no direct measurement of the biases due to these nonsampling errors has been obtained, precautionary steps were taken in all phases of the collection, processing, and tabulation of the data in an effort to minimize their influence.

A major source of bias in the published estimates is the imputing of data for nonrespondents, for late reporters, and for data that fail logic edits. Missing figures are imputed based on period-to-period movements shown by reporting firms. A figure is considered to be an impute if the value was not directly reported on the questionnaire, directly derived from other reported items, directly available from supplemental sources, or obtained from the respondent during the analytical review phase. Imputation generally is limited to a maximum of 10 percent for any one data cell. Figures with imputation rates greater than 10 percent are suppressed or footnoted. The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual yearly movements for nonrespondents may or may not closely agree with the imputed movements. The range of difference between the actual and imputed figures is assumed to be small. The degree of uncertainty regarding the accuracy of the published data increases as the percentage of imputation increases. Figures with imputation rates above 10 percent should be used with caution.

## DATA REVISIONS

Statistics for previous years may be revised as the result of corrected figures from respondents, late reports for which imputations were originally made, or other corrections. Data that have been revised by more than 5 percent from previously published data are indicated by footnotes.

## DISCLOSURE

The Census Bureau collects the CIR data under the authority of Title 13, United States Code, which specifies that the information can only be used for statistical purposes and cannot be published or released in any manner that would identify a person, household, or establishment. "D" indicates that data in the cell have been suppressed to avoid disclosure of information pertaining to individual companies.

## EXPLANATION OF GENERAL TERMS

**Capacity.** The maximum quantity of a product that can be produced in a plant in 1 day if operating for 24 hours. Includes the capacity of idle plants until the plant is reported to be destroyed, dismantled, or abandoned.

**Consumption.** Materials used in producing or processing a product or otherwise removing the product from the inventory.

**Exports.** Includes all types of products shipped to foreign countries, or to agents or exporters for reshipment to foreign countries.

**Gross shipments.** The quantity or value of physical shipments from domestic establishments of all products sold, transferred to other establishments of the same company, or shipped on consignment, whether for domestic or export sale or use. Shipments of products purchased for resale are omitted. Shipments of products made under toll arrangements are included.

**Interplant transfers.** Shipments to other domestic plants within a company for further assembly, fabrication, or manufacture.

**Inventories.** The quantity or value of finished goods, work in progress, and materials on hand.

**Machinery in place.** The number of machines of a particular type in place as of a particular date whether the machinery was used for production, prototype, or sampling, or was idle. Machinery in place includes all machinery set up in operating positions.

**Net receipts.** Derived by subtracting the materials held at the end of the previous month from the sum of materials used during the current month.

**Production.** The total volume of products produced, including: products sold; products transferred or added to inventory after adjustments for breakage, shrinkage, and obsolescence, plus any other inventory adjustment; and products that undergo further manufacture at the same establishment.

**Quantities produced and consumed.** Quantities of each type of product produced by a company for internal consumption within that same company.

---

**Quantity and value of new orders.** The sales value of orders received during the current reporting period for products and services to be delivered immediately or at some future date. Also represents the net sales value of contract change documents that increase or decrease the sales value of the orders to which they are related, when the parties concerned are in substantial agreement as to the amount involved. Included as orders are only those that are supported by binding legal documents such as signed contracts or letter contracts.

**Quantity and value of shipments.** The figures on quantity and value of shipments represent physical shipments of all products sold, transferred to other establishments of the same company, or shipped on consignment, whether for domestic or export sale. The value represents the net sales price, f.o.b. plant, to the customer or branch to which the products are shipped, net of discounts, allowances, freight charges, and

returns. Shipments to a company's own branches are assigned the same value as comparable appropriate allocation of company overhead and profit. Products bought and resold without further manufacture are excluded.

**Stocks.** Total quantity of ending finished inventory.

**Unfilled orders (backlog).** Calculated by adding net new orders and subtracting net sales from the backlog at the end of the preceding year.

#### **HISTORICAL NOTE**

Data on steel mill products have been collected by the Census Bureau since 1921. Historical data may be obtained from Current Industrial Reports (called Facts for Industry before 1959) available at your local Federal Depository Library.
