BUREAU OF THE CENSUS

---

## Highlights

- The proportion of men and women age 30 to 34 years who have never married more than tripled from 9 ( $\pm 1.3$ ) percent to 30 ( $\pm 1.6$ ) percent for men and from 6 ( $\pm 1.0$ ) percent to 20 ( $\pm 1.4$ ) percent for women between 1970 and 1994.
  - There were 7 unmarried couples for every 100 married couples in 1994, compared with only 1 for every 100 in 1970.
  - In 1994, 23.6 million ( $\pm 468,000$ ) adults lived alone, or 12 ( $\pm 0.3$ ) percent of persons 15 years and over.
  - A child in a single-parent situation was about as likely to be living with a parent who had never been married (36 ( $\pm 1.3$ ) percent) as with a parent who was divorced (37 ( $\pm 1.3$ ) percent) in 1994. Another 23 ( $\pm 1.6$ ) percent lived with a parent who was separated from their spouse because of marital discord or some other reason.
- 

## Acknowledgments

This report was prepared in Population Division, under the general direction of **Donald J. Hernandez**, Chief, Marriage and Family Statistics Branch.

**Catherine K. O'Brien** provided statistical and clerical assistance. Overall direction was provided by **Robert A. Kominski**, Assistant Chief, Population Division. The report was reviewed by **Kristin Hansen** and by **Nicholas Zill**, Child Trends, Inc.

The data were collected by Bureau of the Census field representatives, under the direction of **Richard F. Blass**, Acting Chief, Field Division. **David Nguyen** coordinated the programming of the detailed tables in Demographic Surveys Division, and **Ronald R. Tucker** directed survey operations. **Geneva A. Burns** conducted the sampling review in Demographic Statistical Methods Division and provided the Source and Accuracy Statement (appendix E).

The staff of Administrative and Customer Services Division, **Walter C. Odom**, Chief, provided publication planning, design, editorial review, composition, and printing planning and procurement; **Nelsa Brown** provided publication coordination and editing.

# Marital Status and Living Arrangements: March 1994

NOTE: The information on the Hispanic population shown in this report was collected in the 50 states and the District of Columbia, and therefore, does not include residents of Puerto Rico. All demographic surveys including CPS (Current Population Survey) and SIPP (Survey of Income and Program Participation) suffer from undercoverage of the population. This undercoverage results from missed housing units and missed persons within sample households. Compared to the level of the 1990 Decennial Census undercount of 1.6 percent, overall CPS and SIPP undercoverage is about 7 percent. Undercoverage varies with age, sex, and race. For some groups such as 20 to 24 year old Black males, the undercoverage is as high as about 27 percent. The weighting procedures used by the Census Bureau partially correct for the bias due to undercoverage. However, its final impact on estimates is unknown. For details, see appendix E.

## INTRODUCTION

This report presents detailed information on the marital status and living arrangements of the noninstitutional population of the United States, based on the results of the March 1994 Current Population Survey (CPS). The text of the report compares current survey data with data collected from earlier surveys. In some instances, data from decennial censuses are used when survey data are not available. Tables providing current and historical data on the topics covered in the text of this report can be found in appendix A.

Data contained in this report reflect the impact of various factors on the behavior of men and women regarding marriage, divorce, and living arrangements, and the corresponding effect upon the living arrangements of children.

## HIGHLIGHTS

Highlights of the topics discussed in this report are printed below. The numbers in parentheses indicate the 90-percent confidence interval around the estimate, which is the standard used by the Census Bureau for the comparison of statistics based on sample surveys.

- The estimated median age at first marriage was 24.5 ( $\pm 0.1$ ) years for women and 26.7 ( $\pm 0.1$ ) years for men in 1994.
- The proportion of men and women age 30 to 34 years who have never married more than tripled from 9 ( $\pm 1.3$ ) percent to 30 ( $\pm 1.6$ ) percent for men and from 6 ( $\pm 1.0$ ) percent to 20 ( $\pm 1.4$ ) percent for women between 1970 and 1994.
- There were 7 unmarried couples for every 100 married couples in 1994, compared with only 1 for every 100 in 1970.
- In 1994, 23.6 million ( $\pm 468,000$ ) adults lived alone, or 12 ( $\pm 0.3$ ) percent of persons 15 years and over.

- A child in a single-parent situation was about as likely to be living with a parent who had never been married (36 ( $\pm 1.3$ ) percent) as with a parent who was divorced (37 ( $\pm 1.3$ ) percent) in 1994. Another 23 ( $\pm 1.6$ ) percent lived with a parent who was separated from their spouse because of marital discord or some other reason.

- In 1994, 3.7 million ( $\pm 219,000$ ) grandchildren under 18 lived in the home of their grandparents. Thirty-six ( $\pm 2.8$ ) percent had no parents present in the home.
- Among the 30.8 million ( $\pm 583,000$ ) persons 65 years and over (excluding institutional population) in 1994, 55 ( $\pm 1.0$ ) percent lived with their spouse, 30 ( $\pm 0.9$ ) percent lived alone, 13 ( $\pm 0.7$ ) percent lived with other relatives, and 2 ( $\pm 0.3$ ) percent with nonrelatives only.

The data in this report, with few exceptions, are estimates based on sample surveys, and are subject to sampling variability since they are not based on a complete enumeration of the population. Caution is advised when comparing differences in estimates that are based on a small number of cases, especially if the difference is not large.

## MARITAL STATUS

Marital status, as shown in this report, reflects the person's status as of the survey date. For instance, the number of divorced persons is the count of those currently divorced and not remarried. It is not a count of divorces that occurred in 1994 nor a count of all persons who have ever divorced in their lifetime.<sup>1</sup> The category "married" includes adults who live with their spouse or

<sup>1</sup>For estimates of persons ever divorced, see Norton, Arthur J., and Louisa F. Miller (1992) *Marriage, Divorce, and Remarriage in the 1990's*, U.S. Bureau of the Census, Current Population Reports, Series P23-180, U.S. Government Printing Office, Washington, D.C.

who live apart due to marital discord (separated) or for any other reason. "Unmarried" includes those who have never married or are currently divorced or widowed.

**Current marital status.** The number of currently married persons has grown 21 percent since 1970 (from 95 million in 1970 to 115 million in 1994), but the proportion they represented of all adults declined from 72 to 61 percent (table A). The number of unmarried adults doubled since 1970 (from 38 million to 75 million), and the proportion they represented of all adults rose from 28 to 39 percent.

**Table A. Marital Status of Persons 18 Years and Over: 1970 and 1994**

[Numbers in thousands]

Marital status	1994	1970
Total, 18 years and over .....	189,986	132,507
Percent .....	100%	100%
Married .....	61%	72%
Unmarried.....	39%	28%
Never married .....	23%	16%
Widowed.....	7%	9%
Divorced .....	9%	3%

Source: Tables 1 and A-1.

Never-married persons made up the largest share of unmarried adults in 1994 (59 percent) and a sizable portion of the total adult population (23 percent). Between 1970 and 1994, the number of never-married persons more than doubled, from 21.4 million to 44.2 million. However, the fastest growing marital status category was divorced persons. The number currently divorced quadrupled, from 4.3 million in 1970 to 17.4 million in 1994, representing an increase from 3 percent to 9 percent of all adults age 18 and over in 1994.

Declines in the proportion married and increases in the proportion unmarried have occurred for Whites, Blacks, and for persons of Hispanic origin, but the changes have been most pronounced for Blacks (figure 1 and appendix table A-1). In 1994, 63 percent of White adults were currently married, down from 73 percent in 1970. The proportion never-married among Whites increased from 16 to 21 percent during this period. Among Black adults, less than half (43 percent) were currently married in 1994, a considerable decrease from 64 percent in 1970. Thirty-nine percent of Black adults in 1994 had never been married, up from 21 percent in 1970.

**Figure 1.**  
**Marital Status, by Race and Hispanic Origin:**  
**1970 and 1994**

(Persons 18 years and over)

(In percent)

 Married  
 Divorced  
 Widowed  
 Never married

\*Persons of Hispanic origin may be of any race.

The proportion of Hispanics who were currently married declined from 72 to 58 percent between 1970 and 1994. The never-married proportion rose from 19 to 30 percent.<sup>2</sup>

**Estimated median age at first marriage.** In 1994, the estimated median age at first marriage was 26.7 years for men and 24.5 years for women (appendix table A-2). In 1890 (the first year for which data are available), the estimated median age at first marriage was 26.1 years for men and 22.0 years for women. At that time, a decline in the median age at first marriage began that did not end until 1956 when the median reached a low of 22.5 years for men and 20.1 years for women (figure 2). This 66-year decline reversed after the mid-1950's and by 1990 (34 years later) the median had returned to the high 1890-level of 26.1 years for men and an even higher 23.6 years for women. The estimated median age at first marriage has increased more than 4 full years since the low in 1956, with most of this increase occurring since 1975. In the twenty years spanning 1955 and 1975, the median age at first marriage increased only about 1 year for both men and women. In the 19 years that followed (1975-1994), the median age rose more than 3 years for men and women.

<sup>2</sup>In 1970, the proportion of Hispanics currently married was not different from Whites and the proportion never married was not different from Blacks.

These estimates are calculated indirectly by estimating the proportion of young people who will ever marry during their lifetime, calculating one-half of this proportion, and determining the current age of persons at this half-way mark by osculatory interpolation.<sup>3</sup> These medians differ slightly from medians calculated directly from vital records of marriages performed during the specific calendar year as prepared by the National Center for Health Statistics.<sup>4</sup>

**Never-married adults.** The number of persons who have never married has been one of the fastest growing segments of the adult population. In 1994, 44.2 million persons age 18 and older had never married, more than twice the number in 1970 (21.4 million). These never-married persons accounted for 23 percent of all adults. The majority of this growth has been among men and women in their twenties and thirties.

Among women ages 20 to 24, two-thirds had never married in 1994 compared to just over one-third in 1970 (table B). Among women in their late twenties and early

<sup>3</sup>For a complete description of the calculation of median age at first marriage, see U.S. Bureau of the Census, *The Methods and Materials of Demography*, by Henry S. Shryock, Jacob S. Siegel, and Associates, U.S. Government Printing Office, Washington, DC, 1971.

<sup>4</sup>The National Center for Health Statistics, Monthly Vital Statistics Report, Vol. 40, No. 4, Supplement, August 26, 1991, *Advance Report of Final Marriage Statistics*, 1988.

Figure 2.  
**Median Age at First Marriage,

20 to 24 years .....	81%	55%
25 to 29 years .....	50%	19%
30 to 34 years .....	30%	9%
35 to 39 years .....	19%	7%
40 to 44 years .....	13%	6%

Source: Tables 1 and A-3.

thirties, the proportions never married more than tripled between 1970 and 1994 (from 11 to 35 percent for ages 25 to 29 and from 6 to 20 percent for ages 30 to 34). The proportion for women age 35 to 39 more than doubled, from 5 to 13 percent.<sup>5</sup>

Young men have higher proportions never married than women, as men tend to marry at older ages. In 1994, 81 percent of men ages 20 to 24 had never married (up from 55 percent in 1970) and one-half of men ages 25 to 29 had never married (up from 19 percent in 1970). Among men in their thirties, the proportion never married more than tripled during the 1970-to-1994-period for ages 30 to 34 and more than doubled for ages 35 to 39 (from 9 to 30 percent and from 7 to 19 percent, respectively).

Significant increases in the proportions never married have occurred for Whites, Blacks, and Hispanics for men and women under 45 years since 1970, with the highest proportions among Blacks (appendix table A-3). For example, at age 30 to 34 years, 43 percent of Black women in 1994 had not married, compared with 16 percent of White and 21 percent of Hispanic women. The comparable proportions for men age 30 to 34 were 51 percent for Blacks, 27 percent for Whites, and 28 percent for men of Hispanic origin. (The proportion never married age 30 to 34 for Hispanic men is not statistically different from Hispanic women, nor is the proportion of Hispanic men different from White men.)

**Same race and interracial married couples.** This section focuses on racial intermarriage involving race groups classified as either White, Black, or other races. There were 54.3 million married couples in the United States in 1994. In the vast majority (at least 94 percent) of married couples, both partners were of the same race (table C and appendix table A-4). Same race married couples comprised of White husband and White wife made up 88 percent of all married couples, and Black husbands

married to Black wives were 7 percent. The small percentage of couples remaining (5 percent) are divided into those that can be identified as interracial couples and other couples that may or may not be interracial (such as Asian married to Asian or Asian married to American Indian).

Interracial married couples that can be identified here include: (1) Whites married to any race other than White, and (2) Blacks married to any race other than Black.<sup>6</sup> Black/White interracial married couples are a subset of these two groups. By this measure only a small proportion of all married couples are interracial (2.4 percent). In 1994, there were 1.3 million interracial married couples, 296,000 of whom were Black/White, 909,000 were White/Other (other than Black), and 78,000 were Black/Other (other than White). Between 1970 and 1994, the number of interracial married couples increased from 310,000 to 1.3 million. This increase may be partially attributable to the difference between the surveys (Current Population Survey (CPS) versus Decennial census). Among the states that reported race on the marriage records for those marriages that took place in 1988, 2 percent were interracial.<sup>7</sup>

## LIVING ARRANGEMENTS OF CHILDREN

Children under age 18 are considerably more likely to be living with only one parent today than two decades ago. As marital circumstances of the adult population

<sup>6</sup>Lack of detail in the CPS race categories and sample size does not allow for the specific identification of partner's races in other situations.

<sup>7</sup>See footnote 4 above.

**Table C. Race and Hispanic Origin of Husband, by Race and Hispanic Origin of Wife: 1994**

[Numbers in thousands]

Other.....	2,148	365	19	1,764
Origin of Husband:	All married couples	Origin of wife		
		Hispanic <sup>1</sup>	Other	
Total .....	54,251	4,475	49,776	
Hispanic <sup>1</sup> .....	4,320	3,755	564	
Other.....	49,931	719	49,212	

<sup>1</sup>Persons of Hispanic origin may be of any race.

Source: U.S. Bureau of the Census, Current Population Reports, P20-483, *Household and Family Characteristics: March 1994*, table 13.

<sup>5</sup>In 1970, the proportions never married for ages 30 to 34 and 35 to 39 were not statistically different.

have changed, so have the living arrangements of children. The rise in divorce and delay in first marriage among adults are two of the major factors contributing to the growing proportion of children in one-parent living situations.

**Presence of parents.** The proportion of children under 18 years living with two parents has declined since 1970. Between 1970 and 1994, this proportion of children living with two parents declined from 85 to 69 percent. These parents may be the child's biological, step, or adoptive parents.

Children are considerably more likely to be living with only one parent today than in 1970. In 1994, 27 percent of children under 18 lived with one parent, up from 12 percent in 1970 (table D). The majority (88 percent) of these children live with their mother, but an increasing proportion live with their father. In 1994, 12 percent of the children in a one-parent situation lived with their father, up from 9 percent in 1970.

White children are less likely to be living with one parent than are Black children or children of Hispanic origin (appendix table A-5 and figure 3). The proportions living with one parent in 1994 were 21 percent for White children, 57 percent for Black children, and 32 percent for children of Hispanic origin.

Users of these data should note that alternative measurement techniques can be used to derive more refined estimates of the family arrangement of children. The Bureau of the Census recently developed and reported estimates for the living arrangements of children based on family classifications more refined than possible with the CPS.<sup>8</sup> Many surveys, including the CPS, collect information on the relationship of children to the householder, but the Bureau's Survey of Income and Program Participation (SIPP) is unique in recording how each person is related to everyone else in the household.

<sup>8</sup>Furukawa, Stacy (1994) *The Diverse Living Arrangements of Children: Summer 1991*. U.S. Bureau of the Census, Current Population Reports, Series P70-38, U.S. Government Printing Office, Washington, D.C.

**Table D. Living Arrangements of Children: 1970 and 1994**

[Numbers in thousands]

Living arrangements	1994	1970
Children under 18 years .....	69,508	69,162
Percent living with:		
Two parents .....	69%	85%
One parent .....	27%	12%
Mother only.....	24%	11%
Father only.....	3%	1%
Neither parent .....	4%	3%

Source: Tables 4 and A-7.

SIPP data for 1991 were used to distinguish children in two-parent families who lived in "traditional nuclear families" from children in other two-parent family situations, where traditional nuclear families were defined as including (1) both biological parents, (2) siblings who, if present in the home, were full siblings of the child, and (3) no other household members. Historical evidence indicates that since at least the second half of the nineteenth century, a substantial majority of children at any give time lived in households consisting of such "traditional nuclear families," but as of 1991 the proportion was 51 percent.<sup>9</sup> The SIPP report also distinguishes children living with (1) both biological parents, (2) biological mother and stepfather, (3) biological father and stepmother, (4) adoptive mother and father, and (5) foster father and mother.<sup>10</sup>

**Marital status of parent.** A child in a single-parent situation in 1994 was just as likely to be living with a parent who was divorced (37 percent) as with a parent who had never been married (36 percent). Another 23 percent lived with a parent who was separated or living apart from their spouse for some other reason, and 4 percent lived with a widowed parent.

<sup>9</sup>Furukawa (1994); Hernandez, Donald J. (1993: 65, 74-75) *America's Children: Resources from Family, Government, and the Economy*, Russell Sage Foundation, New York.; Peter Uhlenberg (1980), "Death in the Family", *Journal of Family History*, Fall, 1980, 313-320; Hareven, Tamara and Maris Vinovskis (1978) *Family and Population in Nineteenth-Century America*, Princeton University Press, Princeton, N.J.; and Davis, Kingsley (1972) "The American Family in Relation to Demographic Change," pp. 235-265, Charles F. Westoff and Robert Parke, Jr. (eds.), Commission on Population Growth and the American Future, *Research Reports, Volume I, Demographic and Social Aspects of Population Growth*, U.S. Government Printing Office, Washington, D.C.

<sup>10</sup>Data from the Current Population Survey's Marital and Fertility Histories collected in June 1980, 1985, and 1990 have been used to develop estimates of children in biological, step, and adoptive families (see Norton, Arthur J. and Louisa F. Miller (1992), *Marriage, Divorce, and Remarriage in the 1990's*, U.S. Bureau of the Census, Current Population Reports, Series P23-180, U.S. Government Printing Office, Washington, D.C.; Miller, Louisa F., and Jeanne E. Moorman (1989) "Married-Couple Families with Children," *Studies in Marriage and the Family*, U.S. Bureau of the Census, Current Population Reports, Series P-25, No. 162, U.S. Government Printing Office, Washington, D.C.; and Moorman, Jeanne E. and Donald J. Hernandez (1989) "Married-Couple Families with Step, Adopted, and Biological Children," *Demography* 26(2): 267-277.) Estimates of children living with biological, step, and adoptive parents have been developed from the National Health Interview Survey's Child Health Supplements of 1981 and 1988 (see Dawson, Deborah A. (1991) "Family Structure and Children's Health and Well-being: Data from the 1988 National Health Interview Survey on Child Health," *Journal of Marriage and the Family* 53: 573-584; and Zill, Nicholas (1988) "Behavior, Achievement, and Health Problems among Children in Stepfamilies: Findings from a National Survey of Child Health," in E. Mavis Hetherington and Josephine D. Arasteh (eds.), *Impact of Divorce, Single Parenting, and Stepparenting on Children*, Lawrence Erlbaum Associates, Hillsdale, N.J., and the National Survey of Family Growth of 1976 (Bachrach, Christine A. (1983) "Children in Families: Characteristics of Biological, Step-, and Adopted Children," *Journal of Marriage and the Family* 45: 171-179.) For a summary description of family relationship data available from a wide range of surveys, see Zill, Nicholas and Margaret Daly, eds. (1994) *Researching the Family: A Guide to Survey and Statistical Data on U.S. Families*, Child Trends, Inc., Washington, D.C. and Daly (1994).

Table E and figure 4 show the proportion of children in a one-parent arrangement who lived with a divorced, separated, or never-married parent from 1960 to the present. During the years 1982 and 1983, improvements were made to the Census Bureau's data collection and processing procedures to help identify parent-child subfamilies that might otherwise have been overlooked.<sup>11</sup> This accounts for most of the large increase in children of never-married parents in the early 1980's. This analysis, therefore, compares changes in the proportions before and after the improvement period rather than the overall change between the years 1970 and 1994.

Between 1970 and 1981, the proportion of children living with one parent who lived with a divorced parent rose by one-half (from 30 to 44 percent), while the proportion living with a never-married parent doubled,

from 7 to 15 percent. Children of separated parents declined during the 1970-81 period (from 30 to 27 percent in 1970 and 1981, respectively). In the years since the improvements were implemented (between 1983 and 1994), the proportion of one-parent children who lived with a divorced parent declined from 42 to 37 percent, while the proportion who lived with a never-married parent continued to rise, from 24 to 36 percent. The proportion living with a separated parent declined from 23 to 18 percent. A decade ago, a child in a one-parent situation was almost twice as likely to be living with a divorced parent as with a never-married parent, while today, the child is about as likely to be living with a divorced parent (37 percent) as with a never-married parent (36 percent). However, when children of unwed parents are compared to all children of parental marital discord (separation and divorce) the proportions have narrowed considerably, but the combined proportion living with a separated or divorced parent is still about half again as high.

<sup>11</sup>For a more detailed discussion of the procedural improvement, see Current Population Reports, Series P-20, No. 399, *Marital Status and Living Arrangements: March 1984*, p. 8.

**Table E. Proportion of Children in Single-Parent Situations Living With a Separated, Divorced, or Never-Married Parent: 1960, 1970, 1975, and 1980-1994**

Year	Children living with a—		
	Separated parent	Divorced parent	Never-married parent

1994 .....	18.4	37.0	35.8

\* Partial implementation of processing change.

\*\* Full implementation of processing change.

The increase in children living with one parent is also reflected in number of births to unmarried women. Between 1980 and 1991, the number of births to unmarried women rose by 82 percent. In 1991, there were 1.2

million births to unmarried mothers, representing 3 out of 10 total births in that year. The comparable figures for 1980 were 0.7 million births, fewer than 2 out of 10 total births.<sup>12</sup>

**Grandchildren.** In 1994, there were 3.7 million grandchildren under 18 years old living in the home of their grandparent(s). This represented 5 percent of all children under 18, up only slightly from 3 percent of all children in 1970 (appendix table A-6). The number of grandchildren shown here includes only those situations where the grandparents owned or rented the home; it does not include grandparents living in the home maintained by the child's parent(s).

In 1994, 12 percent of children living with grandparents also had both parents living with them, 47 percent had only their mother present, 5 percent had only their father present, and 36 percent had neither parent present in the grandparents' home. Since 1970, there has been an increase in the proportion of these children who have only their mother present and a decline in the proportion with no parent present. However, procedural improvement in the data collection and processing scheme during 1982-83 that helped to identify parent-child subfamilies is responsible for much of the decline in grandchildren living solely with their grandparents. (See section on "Marital status of parent" above.)

<sup>12</sup>The National Center for Health Statistics, Monthly Vital Statistics Report, Vol. 42, No. 3, Supplement, September 9, 1993, Advance Report of Final Natality Statistics, 1991.

**Figure 4.**  
**Children of Single Parents, by Marital Status of Parent: 1960-94**

Note: Shaded area reflects processing change implementation.

Black children were more likely to live in their grandparents' home than White children or children of Hispanic origin. In 1994, 13 percent of Black children lived in the home of their grandparents, compared with 4 percent for Whites and 6 percent for Hispanics.

## LIVING ARRANGEMENTS OF ADULTS

Changes in the marital circumstances of the adult population greatly affect the way people live. Many of the specific living arrangements (such as living alone, with parents, in unmarried-couple households, etc.) are covered individually in this section. Table F provides an overview of basic living arrangements of adults 18 years and over in 1994. Eighty percent of adults lived with one or more family members, be they a spouse, child, parent, or other relative, while 12 percent lived alone and 8 percent lived with nonrelatives only.

**Table F. Living Arrangements of Adults 18 Years and Over: 1994**

[Numbers in thousands]

Living arrangements	Number	Percent
Total, 18 years and over .....	189,987	100.0
Living with a relative .....	152,093	80.1
Family householder.....	68,444	36.0
Spouse of householder .....	53,128	28.0
Child of householder.....	21,981	11.6
Others, living with relatives .....	8,540	4.5
Not living with a relative.....	37,894	19.9
Householder living alone .....	23,607	12.4
Householder with nonrelatives present..	5,005	2.6
Others, living with nonrelatives.....	9,282	4.9

Source: Tables 2 and 7.

**Young adults.** Significant changes in the living arrangements of young adults have occurred in the past few decades (appendix table A-7). More young adults are living at home with their parents, more are living alone or sharing their home with a roommate or other nonrelative, more are living in the homes of others, and fewer are maintaining families of their own. The most striking of these changes has been the decline of persons maintaining families of their own.

Between 1970 and 1994, the proportion of persons 18 to 24 years old maintaining a family (married couples or other persons maintaining families) dropped from 38 to 21 percent, and the proportion of nonfamily householders (persons living alone or sharing the home they owned/rented with a roommate or other nonrelative) increased from 5 to 9 percent. Eighteen percent of persons 18 to 24 years old lived in the home of someone other than their parents, up from 10 percent in 1970. Since 1970, the proportion of adults aged 25 to 34 who maintained their own families also declined, from 83 to 62 percent. While this older group was three times more

likely than the younger group to be maintaining a family in 1994, they were only about twice as likely in 1970. The proportion of 25-to-34-year-olds living alone or sharing their home with nonrelatives increased from 5 percent in 1970 to 13 percent in 1994 and the proportion living in the home of someone other than their parents increased from 4 to 13 percent.<sup>13</sup>

The proportion of adults age 18 to 24 years who live in the home of their parents increased notably during the 1980's, but changed little or not at all during the 1970's and 1990's. Between 1970 and 1980, the proportion of 18-to-24-year-olds living in their parent's home was constant (47 percent in 1970 and 48 percent in 1980). During the 1980's, the proportion rose 5 percentage points to 53 percent in 1990. In 1994, the proportion living in their parents' home remained at 53 percent. Among adults age 25 to 34, a similar pattern exists. The proportions of these "older" young adults who lived with their parents were 8 percent in 1970, 9 percent in 1980, and 12 percent in 1990 and 1994. Increases in the proportion living at "home" occurred for both men and women, but at all points in time, men were more likely to live at "home" than women.

The majority of young adults who lived with their parents had never married (97 percent of 18-to-24-year-olds and 80 percent of 25-to-34-year-olds); the proportion who lived with their parents and who had children of their own present was 4 percent and 15 percent for each age group, respectively. (See table 7.)

**Persons living alone.** The population living alone represented 12 percent of adults age 15 and over in 1994 (23.6 million). (See appendix table A-8.) While women accounted for the larger share of persons living alone in 1994 (6 of 10), the number of men living alone increased at a faster pace than the number of women living alone. Between 1970 and 1994, the number of women living alone rose from 7.3 million to 14.2 million, a 94-percent increase. During this same time period, the number of men living alone rose from 3.5 million to 9.4 million, an increase of 167 percent.

Living alone is more common among the elderly, especially among women. Of adults under 45 years, only 6 percent of women and similarly 8 percent of men lived alone in 1994. For persons age 75 and older, the proportion was 52 percent for women and 21 percent for men. At the youngest age groups, there was a significant increase in the proportions of men and women living alone during the 1970's, but there has been no increase since 1980. Among adults under 35 years, the proportions of men and women living alone at least doubled between 1970 and 1980, while there was no increase between 1980 and 1994. Among 35-to-44-year-olds, the

<sup>13</sup>In 1970, the proportion of 25-to-34-year-olds living at home or sharing their home with nonrelatives was not statistically different from the proportion living in the home of someone other than their parents.

proportion living alone increased during each time period (1970-to-1980 and 1980-to-1994), growing from 4 to 10 percent for men between 1970 and 1994 and from 3 to 7 percent for women.

For persons age 75 and over, there was virtually no increase in the proportion of men living alone (19 percent in 1970 and 21 percent in 1994), but there was a large increase for women (from 37 to 52 percent). Most of the increase for women occurred during the decade of the 1970's.

**Unmarried-couple households.** The number of unmarried-couple households was 3.7 million in 1994, up from 523,000 in 1970 (appendix table A-9). Today there are 7 unmarried couples for every 100 married couples, compared with only 1 for every 100 in 1970. Two-thirds of unmarried-couple households have no children under 15 years present.

An "unmarried-couple household," as used here, is composed of two unrelated adults of the opposite sex (one of whom is the householder) who share a housing unit with or without the presence of children under 15 years old. This count of unmarried-couple households is intended mainly to identify cohabiting couples, but it may also include households with a roommate, boarder, or paid employee of the opposite sex.

In the 1990 decennial census, a new approach was adopted to estimate the number of cohabiting households. The relationship category, "unmarried partner," was added to the 1990 Census Questionnaire. The Census definition of the category is, "a person who is not related to the householder, who shares living quarters, and who has a close personal relationship with the householder." This category differs from the "Roomer/boarder" and "housemate/roommate" categories, where the person is not related to the householder and shares the living quarters primarily to reduce housing expenses.

The count of households with an unmarried partner of the opposite sex in the census of 1990 was 3,042,642. This is close to the 1990 Current Population Survey count of unmarried-couple households (2.9 million). Because the "unmarried partner" category is new to the census in 1990, the "unmarried-couple household" data from the CPS provide the only tool available for measuring change. The closeness of the two estimates (Census vs. CPS) in 1990 suggests that the increase in cohabiting couples can be measured with reasonable accuracy using the CPS.

**The elderly.** In 1994, there were 30.8 million persons age 65 years and older (excluding the noninstitutional population, such as those living in nursing homes or other places providing care or custody). Living arrangements of the elderly population differ by age, sex, and race. The "older" elderly (age 75 and over) are more likely than the "younger" elderly (age 65 to 74) to live

with other relatives, females are more likely than males to live alone, and Whites and Hispanics are more likely than Blacks to live with their spouses (appendix table A-10).

Among those age 65 to 74, the majority (64 percent) were married and living with their spouse, 23 percent lived alone, and 11 percent lived with other relatives. By age 75 and over, there is a higher proportion of widowed persons, resulting in very different living arrangements than for the younger cohort. Persons age 75 years and over were about as likely to live alone as to live with their spouse (40 percent and 43 percent, respectively), and 15 percent lived with other relatives.

The majority of elderly are women (18.0 million women versus 12.7 million men in 1994). Women on average live longer than men and longevity is a major factor affecting the gender difference in elderly living arrangements. Three of 10 women age 65 to 74 and half of women 75 and over lived alone in 1994. The proportions for men, by comparison were 13 and 21 percent, respectively. Elderly men were more likely than elderly women to live with their spouse.

Elderly Blacks and Hispanics were less likely to live with their spouse than elderly Whites (41, 40, and 57 percent, respectively, in 1994). The proportion of elderly who lived alone was higher for Whites (30 percent) and Blacks (31 percent) than for persons of Hispanic origin (22 percent), and the proportion who lived with other relatives was higher for Blacks and Hispanics than for Whites (24, 27, and 11 percent, respectively).<sup>14</sup>

## CHANGES FOR 1994

**1990 census based.** The estimates for 1994 in this report are inflated to national population controls by age, race, sex, and Hispanic origin based on results of the 1990 census. Appendix C provides a description of the introduction of 1990 census population controls. Tables in appendix C provide survey results from the March 1993 CPS based on the 1980 census compared to the same survey results using 1990 census population controls, thus providing a "bridge" to illustrate the effects of these new controls on data for marital status and living arrangements of the population. The two sets of population controls produce estimates that are quite similar.

**Computer assisted interview.** The March 1994 CPS was the first March CPS survey to use computer-assisted interviewing rather than the customary paper and pencil interviewing. See appendix D for a detailed description of the conversion to a computer-assisted questionnaire.

<sup>14</sup>In 1994, there was no statistical difference between Blacks and Hispanics in the proportions of elderly who lived with their spouse nor in the proportions who lived with other relatives. The proportions who lived alone were not statistically different for Blacks and Whites.

**Group quarters families.** The March 1994 CPS tape file identifies families in households, as it has historically, but it also, for the first time, identifies a small number of families (16,000) in group quarters. The March 1994 estimates shown in this report, as in all previous reports, count all persons in noninstitutional group quarters as group quarters population and not as family members. This is consistent with our definition of households, families, and family groups. In contrast, the income and poverty report includes these 16,000 group quarters families in its count of families.<sup>15</sup>

For researchers interested in using March CPS data for 1994 (and future years) to develop their own family estimates that include persons and families in group quarters, we provide the following information. On the 1994 public use microdata file, the unweighted unit count of families in group quarters is 17, and there are 58 persons in family group quarters. These families and persons are found in 15 family group quarters, while the remaining 101 group quarters are non-family group quarters.

On previous microdata files there was one family record for each person living in group quarters. Beginning with 1994 (and in later years), there will continue to be one family record for each person living in non-family group quarters, there will be one family record for each family living in family group quarters (a total of 17 in 1994), and there will be one family record for each person living in family group quarters who is not a member of the family.

The following variables on the microdata file can be used to calculate various alternative estimates involving family group quarters. First, as in the past, using the variable H-TYPE on the household record, code values 1-8 identify households as defined historically, and code value 9 identifies group quarters as defined historically. Second, a new variable on the household record, HRHTYPE, is available to identify households as defined historically with code values 1-8, family group quarters with code value 9, and non-family group quarters with code value 10. Third, variable A-FAMTYP on the person record can be used to identify persons who are in group quarters but are not in a family, code value of 2 or 5 (for primary or secondary individual), regardless of the type of group quarters. Fourth, variable A-FAMTYP on the person record can be used to identify persons who are in family group quarters and who are family members, code values 1, 3, and, 4 for persons with HRHTYPE codes of 9.

Note that family records do not have a variable indicating whether the family record pertains to a family or unrelated individual in (1) a household, (2) a family group quarters, or (3) a non-family group quarters. To

ascertain whether a specific family record pertains to a household, a family group quarters, or a non-family group quarters, and whether it pertains to a family, or to a secondary individual, it is necessary to consult the HRHTYPE variable on the corresponding household record, and the A-FAMTYP variable for the corresponding person record(s). To ascertain the household or group quarters status of a person, and hence the nature of their family record, it is necessary to consult information on both the household record and the person record as indicated above.

## DATA FILES AVAILABLE

The historical tables as they appear in appendix A and additional historical tables showing annual data are available on floppy diskette in either ASCII print files or QUATTRO PRO files (version 3.1). Users wishing to purchase files should specify which data format they prefer (ASCII or QUATTRO PRO), include a check for \$20 (make checks payable to "Commerce-Census"), and send to: Statistical Information Office, Population Division, U.S. Bureau of the Census, Washington, DC 20233.

## USER COMMENTS

We welcome your reaction to the usefulness of the information presented here and to the content of the questions used to provide these results. We are interested in your recommendations for improving our survey work. A facsimile of our questions may be found in appendix F. Please fill out the "U.S. Bureau of the Census User Questionnaire" located at the front of this report and return it with your comments.

## RELATED REPORTS

Detailed statistics of household type and composition for 1994 and historical data back to 1947 on households and families by type are presented in Series P20-483, *Household and Family Characteristics: March 1994*.

Projections for the United States of the numbers of households and families were published in Series P25-986, *Projections of the Number of Households and Families: 1986 to 2000*. Estimates of the number and characteristics of households and families that continue, discontinue, and/or are newly formed over 1-year and 2-year periods are presented in Current Population Reports, Series P23-179, *When Households Continue, Discontinue, and Form*. The most up-to-date information on the marital history of the population, that is, lifetime experience with divorce, remarriage, etc., may be found in Current Population Reports, Series P23-180, *Marriage, Divorce, and Remarriage in the 1990's*. A series of graphs and interpretive text illustrating important trends

<sup>15</sup>U.S. Bureau of the Census, Current Population Reports, Series P60-188, *Income, Poverty, and Valuation of Noncash Benefits: 1993*, U.S. Government Printing Office, Washington, DC 1995.

of the past several decades that have influenced household and family circumstances of all persons, with special emphasis on children, is available in chartbook form in Current Population Reports, Series P23-181, *Households, Families, and Children: A Thirty-Year Perspective*. Sixteen graphs and interpretive text focusing on changes for children between 1980 and 1990 in parental living arrangements, parental employment, family income, and poverty are available in chartbook form in Series WE10, *We the American Children*. A detailed historical study presenting trends for children from 1940 to 1989 regarding (1) nuclear and extended family living arrangements, (2) parental educational attainment, employment, and availability to provide child care, (3) family income and poverty, and (4) working-poor and welfare-dependent status is presented in *America's Children: Resources from Family, Government, and the Economy* (authored by Donald J. Hernandez, published in 1993 as a census monograph by the Russell Sage Foundation,

New York, NY). A detailed study of marriage and families for 1980, with many historical time series is presented in *American Families and Households* (authored by James A. Sweet and Larry L. Bumpass, published in 1987 as a census monograph by Russell Sage Foundation, New York, NY). The 1990 census monograph (edited by Reynolds Farley and published by the Russell Sage Foundation, New York, NY, in 1995), *State of the Union: America in the 1990's*, Volume 2: Social Trends, includes chapters on children ("Children and Youth: Living Arrangements and Welfare" by Dennis P. Hogan and Daniel T. Lichter) and families ("Growing Diversity and Inequality in the American Family" by Sara McLanahan and Lynne Casper).

Additional statistics for years since 1947 on subjects covered in this report have been published by the Bureau of the Census in other reports in Series P20, P23, and P25 and are listed at the end of this publication (appendix G).

## Appendix B.

# Definitions and Explanations

**(Coverage.** The population in this report includes the civilian noninstitutional population of the United States plus approximately 957,000 members of the Armed Forces in the United States living off post or with their families on post in 1994, but excludes all other members of the Armed Forces.)

(“*Undocumented Immigrants.*” The 1980 census counted about 2 million undocumented immigrants according to Census Bureau estimates. Beginning in January 1986, the independent population controls included an allowance for growth in the undocumented population for every year since 1980. This methodological change was partially offset by another change that increased the allowance for emigration of legal residents. Data shown for Current Population Surveys with controls based on pre-1986 methods have not been revised to take into account these methodological changes. Consequently, direct comparisons of CPS figures for months before January 1986 with later months will not be consistent. Series P-25, No. 985 reviews the postcensal population estimates methodology currently in use.)

**Age.** The age classification is based on the age of the person at the person’s last birthday. The adult universe (i.e., population of marriageable age) now comprises persons 15 years old and over. Prior to 1980 the adult universe was 14 years old and over.

**Age at first marriage.** The median age at first marriage, as shown in this report, is an approximation derived indirectly from tabulations of marital status and age. In computing this median, several steps are involved. First, the expected proportion of young people who will ever marry during their lifetime is computed. Second, one-half of this expected proportion is calculated. And third, the current age of young people who are at this halfway mark is computed. From the assumptions made and the procedures used, it follows that the date of the survey is also the date when this halfway mark is reached. Half of the young people of the given age who will ever get married had done so prior to the survey date and half are expected to marry in years to come.

**Children.** “Own” children in a family are sons and daughters, including stepchildren and adopted children, of the householder. Similarly, “own” children in a subfamily are sons and daughters of the married couple or parent in the subfamily. (All children shown as members of related subfamilies are own children of the person(s) maintaining the subfamily.) For each type of family unit identified in the CPS, the count of own children under 18 years old is limited to never-married children; however, “own children under 25” and “own children of any age,” as the terms are used here, include all children regardless of marital status. The totals include never-married children living away from home in college dormitories.

“Related” children in a family include own children and all other children under 18 years old in the household who are related to the householder by birth, marriage, or

adoption. The count of related children in families was formerly restricted to never-married children. However, beginning with data for 1968, the Bureau of the Census includes ever-married children under the category of related children. This change added approximately 20,000 children to the category of related children in March 1968.

“*Children,*” as shown in tables 4, 5, and 6 of this report, are all persons under 18 years, excluding persons who maintain households, families, or subfamilies as reference person or spouse.

**Family.** A family is a group of two persons or more (one of whom is the householder) related by birth, marriage, or adoption and residing together; all such persons (including related subfamily members) are considered as members of one family. Beginning with the 1980 CPS, unrelated subfamilies (referred to in the past as secondary families) are no longer included in the count of families, nor are the members of unrelated subfamilies included in the count of family members. The number of families is equal to the number of family households, however, the count of family members differs from the count of family household members.

**Family group.** A family group is any two or more persons (not necessarily including a householder) residing together, and related by birth, marriage, or adoption. A household may be composed of one such group, more than one, or none at all. The count of family groups includes family households, related subfamilies, and unrelated subfamilies.

**Family household.** A family household is a household maintained by a family (as defined above), and any unrelated persons (unrelated subfamily members and/or secondary individuals) who may be residing there are

included. The number of family households is equal to the number of families. The count of family household members differs from the count of family members, however, in that the family household members include all persons living in the household, whereas family members include only the householder and his/her relatives. See the definition of family.

**Group quarters.** As of 1983, group quarters were defined in the Current Population Survey as noninstitutional living arrangements for groups not living in conventional housing units or groups living in housing units containing ten or more unrelated persons or nine or more persons unrelated to the person in charge. (Prior to 1983, group quarters included housing units containing five or more persons unrelated to the person in charge.) Examples of persons in group quarters include a person residing in a rooming house, in staff quarters at a hospital, or in a halfway house. Beginning in 1972, inmates of institutions have not been included in the Current Population Survey.

**Hispanic origin.** Persons of Hispanic origin in this report were determined on the basis of a question that asked for self-identification of the person's origin or descent. Respondents were asked to select their origin (or the origin of some other household member) from a "flash card" listing ethnic origins. Persons of Hispanic origin, in particular, were those who indicated that their origin was Mexican, Puerto Rican, Cuban, Central or South American, or some other Hispanic origin. Persons of Hispanic origin may be of any race.

**Household.** A household consists of all the persons who occupy a housing unit. A house, an apartment or other group of rooms, or a single room, is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters; that is, when the occupants do not live and eat with any other persons in the structure and there is direct access from the outside or through a common hall.

A household includes the related family members and all the unrelated persons, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone in a housing unit, or a group of unrelated persons sharing a housing unit as partners, is also counted as a household. The count of households excludes group quarters.

**Householder.** The householder refers to the person (or one of the persons) in whose name the housing unit is owned or rented (maintained) or, if there is no such person, any adult member, excluding roomers, boarders, or paid employees. If the house is owned or rented jointly by a married couple, the householder may be either the husband or the wife. The person designated as the householder is the "reference person" to whom

the relationship of all other household members, if any, is recorded. Prior to 1980, the husband was always considered the householder in married-couple households. The number of householders is equal to the number of households. Also, the number of family householders is equal to the number of families.

*"Head versus householder."* Beginning with the 1980 CPS, the Bureau of the Census discontinued the use of the terms "head of household" and "head of family." Instead, the terms "householder" and "family householder" are used. Recent social changes have resulted in greater sharing of household responsibilities among the adult members and, therefore, have made the term "head" increasingly inappropriate in the analysis of household and family data. Specifically, the Census Bureau has discontinued its longtime practice of always classifying the husband as the reference person (head) when he and his wife are living together. In this report, the term "householder" is used in the presentation of data that had previously been presented with the designation "head." The householder is the first adult household member listed on the questionnaire. The instructions call for listing first the person (or one of the persons) in whose name the home is owned or rented. If a home is owned jointly by a married couple, either the husband or the wife may be listed first, thereby becoming the reference person, or householder, to whom the relationship of other household members is to be recorded.

**Income.** Data on income cover money income only, prior to deduction for taxes, received from such sources as wages or salaries, net income from self-employment, Social Security, dividends, interest, public assistance and welfare, unemployment compensation, government pensions, and veterans payments. Certain money receipts such as capital gains are not included.

In table 6, number of children by family income refers to the income of the family (including related subfamily members, if any) or of the unrelated subfamily of which the child is a member. For a more detailed explanation of income, see Bureau of the Census, Current Population Reports, Series P60.

**Labor force and employment status.** The definitions of labor force and employment status in this report are related to the civilian population 15 years and over. Persons shown here are classified as in the labor force if they were employed as civilians during the survey week.

*"Employed."* Employed persons comprise (1) all civilians who, during the specified week, did any work at all as paid employees or in their own business or profession, or on their own farm, or who worked 15 hours or more as unpaid workers on a farm or in a business operated by a member of the family, and (2) all those

who were not working but who had jobs or businesses from which they were temporarily absent because of illness, bad weather, vacation, or labor management dispute, or because they were taking time off for personal reasons, whether or not they were paid by their employers for time off, and whether or not they were seeking other jobs. Excluded from the employed group are persons whose only activity consisted of work around the house (own home housework, painting or repairing own home, etc.) or volunteer work for religious, charitable, and similar organizations.

*"Unemployed."* Unemployed persons are those civilians who, during the survey week, had no employment but were available for work and (1) had engaged in any specific job-seeking activity within the past 4 weeks, such as registering at a public or private employment office, meeting with prospective employers, checking with friends or relatives, placing or answering advertisements, writing letters of application, or being on a union or professional register; (2) were waiting to be called back to a job from which they had been laid off; or (3) were waiting to report to a new wage or salary job within 30 days.

*"Not in the labor force."* All civilians who are not classified as employed or unemployed are defined as "not in the labor force." This group who are neither employed nor seeking work includes persons engaged only in own home housework, attending school, or unable to work because of long-term physical or mental illness; persons who are retired or too old to work, seasonal workers for whom the survey week fell in an off season, and the voluntary idle. Persons doing only unpaid family work (less than 15 hours) are also classified as not in the labor force.

**Marital status.** The marital status classification identifies four major categories: never married, married, widowed, and divorced. These terms refer to the marital status at the time of the enumeration.

The category "married" is further divided into "married, spouse present," "separated," and "other married, spouse absent." A person was classified as "married, spouse present" if the husband or wife was reported as a member of the household, even though he or she may have been temporarily absent on business or on vacation, visiting, in a hospital, etc., at the time of the enumeration. Persons reported as "separated" includes those with legal separations, those living apart with intentions of obtaining a divorce, and other persons permanently or temporarily separated because of marital discord. The group "other married, spouse absent" includes married persons living apart because either the husband or wife was employed and living at a considerable distance from home, was serving away from home in the Armed Forces, had moved to another area,

or had a different place of residence for any other reason except separation as defined above.

"Single," when used as a marital status category, is the sum of never-married, widowed, and divorced persons. "Single," when used in the context of single-parent family/household, means only one parent is present in the home. The parent may be never-married, widowed, divorced, or married, spouse absent.

**Married couple.** A married couple, as defined for census purposes, is a husband and wife enumerated as members of the same household. The married couple may or may not have children living with them. The expression "husband-wife" or "married-couple" before the term "household," "family," or "subfamily" indicates that the household, family, or subfamily is maintained by a husband and wife. The number of married couples equals the count of married-couple families plus related and unrelated married-couple subfamilies.

**Metropolitan-nonmetropolitan residence.** The population residing in metropolitan statistical areas (MSA's) constitutes the metropolitan population. MSA's are defined by the Office of Management and Budget for use in the presentation of statistics by agencies of the Federal Government. An MSA is a geographic area consisting of a large population nucleus, together with adjacent communities which have a high degree of economic and social integration with that nucleus. The definitions specify a boundary around each large city so as to include most or all its suburbs. Entire counties form the MSA building blocks, except in New England where cities and towns are used. The former term SMSA was changed to MSA in 1983.

An area qualifies for recognition as an MSA if (1) it includes a city of at least 50,000 population, or (2) it includes a Census Bureau-defined urbanized area of at least 50,000 with a total metropolitan population of at least 100,000 (75,000 in New England). In addition to the county containing the main city or urbanized area, an MSA may include other counties having strong commuting ties to the central county. If specified conditions are met, certain large MSA's are designated as consolidated MSA's (CMSA's) and divided into component primary MSA's (PMSA's).

In July 1985, the CPS began carrying the metropolitan statistical area definitions announced by the Office of Management and Budget on June 30, 1984. Figures published from the CPS in the early 1980's and throughout most of the 1970's referred to metropolitan areas as defined on the basis of the 1970 census. Since there are important differences in the population classified as metropolitan using the 1970 and 1984 definitions, comparisons should be avoided.

The new CPS metropolitan estimates have consistently been higher than independent estimates of the metropolitan population prepared by the Census Bureau;

the new CPS nonmetropolitan estimates have been lower than the independent estimates. The apparent overestimation of metropolitan and underestimation of nonmetropolitan population in the CPS relative to the Census Bureau's independent estimates should be taken into account when using the data.

**Nonfamily householder.** A nonfamily householder is a person maintaining a household while living alone or exclusively with persons to whom they are not related.

**Poverty.** The poverty definition used here is that adopted for official Government use by the Office of Management and Budget and consists of a set of money income thresholds that vary by family size and composition. Families or individuals with income below a particular threshold are classified as below the poverty level. The poverty thresholds are updated every year to reflect changes in the Consumer Price Index. These thresholds are based on money income only and do not include the value of noncash benefits such as employer-provided health insurance, food stamps, or Medicaid. For a more detailed explanation, see Bureau of the Census, Current Population Reports, Series P60.

**Race.** The population is divided into three groups on the basis of race: White, Black, and other races. The last category includes Indians, Japanese, Chinese, and any other race except White and Black.

**Reference person.** The household reference person is the person with regard to whom the relationship of other persons in the household is recorded. The household reference person is the person listed as the householder (see definition of "Householder"). The subfamily reference person is either the single parent or the husband or wife in a married-couple situation.

**Rounding of estimates.** Individual figures are rounded to the nearest thousand without being adjusted to group totals, which are independently rounded; percentages are based on the unrounded numbers.

**Secondary individuals.** Secondary individuals are persons of any age who reside in a household, but are not related to the householder (except unrelated subfamily members). Persons who reside in group quarters are also secondary individuals. Examples of a secondary individual include (1) a guest, partner, roommate, or resident employee; (2) a foster child; or (3) a person residing in a rooming house, a halfway house, staff quarters at a hospital, or other type of group quarters.

**Subfamily.** A subfamily is a married couple with or without children, or a single parent with one or more own never-married children under 18 years old. A subfamily does not maintain their own household, but lives in the home of someone else.

**"Related subfamily."** A related subfamily is a married couple with or without children, or one parent with one or more own never-married children under 18 years old, living in a household and related to, but not including, the person or couple who maintains the household. One example of a related subfamily is a young married couple sharing the home of the husband's or wife's parents. The number of related subfamilies is not included in the count of families.

**"Unrelated subfamily."** An unrelated subfamily (formerly called a secondary family) is a married couple with or without children, or a single parent with one or more own never-married children under 18 years old living in a household. Unrelated subfamily members are not related to the householder. An unrelated subfamily may include persons such as guests, partners, roommates, or resident employees and their spouses and/or children. The number of unrelated subfamily members is included in the total number of household members, but is not included in the count of family members.

Beginning in 1989, any person(s) who is not related to the householder and who is not the husband, wife, parent, or child in an unrelated subfamily is counted as an unrelated individual.

**Symbols.** A dash (-) represents zero or rounds to zero. The symbol "B" means that the base for the derived figure is less than 75,000. An "X" means not applicable, and "NA" means not available.

**Tenure.** A housing unit is "owned" if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for. A cooperative or condominium unit is "owned" only if the owner or co-owner lives in it. All other occupied units are classified as "rented," including units rented for cash rent and those occupied without payment of cash rent.

**Unmarried couple.** An unmarried couple is composed of two unrelated adults of the opposite sex (one of whom is the householder) who share a housing unit with or without the presence of children under 15 years old.

**Unrelated individuals.** Unrelated individuals are persons of any age who are not members of families or subfamilies.

**Years of school completed.** Education of parent, as shown in this report, refers to the years of school completed by the parent (the reference person when both parents are present). Data on years of school completed were derived from the combination of answers to two questions, (a) "What is the highest grade of school that the person has attended?" and (b) "Did the person finish this grade?"

## Appendix C.

### Introduction of 1990 Census Population Controls

The procedure used in developing population estimates in the Current Population Survey (CPS) involves the weighting of sample results to independent estimates of the population by sex, age, race, and Hispanic/non-Hispanic categories. These independent estimates are developed by using civilian noninstitutional population counts from the decennial censuses and projecting them forward to current years using data on births, deaths, and net migration. Beginning with the January 1994 CPS, the independent estimates used as control totals for the CPS are based on civilian noninstitutional population benchmarks established by the 1990 decennial census. In addition, for the first time in the history of the CPS, estimates of the decennial

census undercount were used in establishing the population benchmarks.<sup>1</sup>

To show the effect of introducing new population controls, two sets of data for March 1993 are shown in tables C-1 through C-3 for selected characteristics of the total, White, Black, and Hispanic populations. The data for March 1993 are shown using both the new 1990 census-adjusted controls and previously used 1980 census controls. Even though the difference is quite small, caution should be used when comparing CPS data for March 1994 with figures for earlier years.

<sup>1</sup>For a detailed description of the method used to develop the 1990 census control totals for the CPS, see Department of Labor, Bureau of Labor Statistics, *Employment and Earnings*, Volume 41, No. 2, February 1994.

## Appendix D.

# Conversion to a Computer-Assisted Questionnaire

---

The March 1994 Current Population Survey (CPS) and its income supplement are the first to use computer-assisted survey information collection (CASIC) technology for its entire data collection process. CASIC was introduced for monthly labor force data collection in January 1994. Prior to March 1994, a subsample of households was interviewed from centralized telephoning facilities. These cases amounted to about 8 percent of the total CPS caseload in 1993. The results of these cases were merged with the information collected using customary paper and pencil interviewing (PAPI).

Beginning in July 1992, and lasting for 18 months, a sample of approximately 14,000 households was selected and interviewed using a totally computer-assisted labor force data collection environment. These cases were selected as an independent, nationally representative sample and became known as the CATI/CAPI Overlap (CCO) sample. The purpose of the CCO was: 1) to measure the official labor force concepts more precisely, 2) to expand the amount of data available, 3) to implement several definitional changes, and 4) to adopt a computer-assisted interviewing environment. In March 1993, the demographic and income supplements were administered to the CCO sample and the results were compared to estimates from the March 1993 CPS. These comparisons were inconclusive in that they did not indicate any systematic differences between computer-assisted and paper and pencil interviewing. This was not surprising, since the CCO supplement used basically the same set of questions as the March 1993 CPS and had previously been used in a computer-assisted environment in the centralized telephone facilities. Factors which complicated the comparison of the data from the CPS and the CCO included the experience level of the CCO interviewers and field representative (FRs) and the size of the CCO sample. CCO interviewers and FRs were less experienced on the March demographic and income supplements than CPS FRs. The March 1993 CCO was the first experience many of these FRs had collecting demographic and income supplemental data using CASIC. The combination of inexperienced FRs, complex questions, and a new technology could have had an effect on the quality of the March 1993 CCO demographic and income supplements data. In addition, the size of the CCO sample (less than one-fourth the size of the CPS) was small enough that only very large differences between CPS and CCO estimates would have been statistically detectable.

Other differences in data collection procedures included:

- The March 1994 supplement employed a somewhat different demographic edit than the March 1993 supplement. The March 1994 edit resolved inconsistencies between the reported relationships of household members. In addition, family relationship was assigned to persons living in group quarters. In the March 1993 CPS, persons in group quarters were automatically designated as unrelated individuals. Since the demographic edit is the basis for the formation of family records, comparisons of family-based measures between the March 1993 and March 1994 CPS may be affected by these differences.
- The March 1994 computerized instrument restricted the number of respondents in a household to 16 for the demographic questions and 8 for the income supplement questions. The March 1993 PAPI allowed for the possibility of up to 39 respondents per household. Data from the March 1993 CPS show that only 0.01 percent of all housing units contained 9 or more respondents 15 years old and over. The aggregate income of these housing units represented 0.002 percent (\$74 million) of the total aggregate income (\$3.8 trillion). In the March 1994 CPS, the only circumstances under which income would go unreported was if more than eight persons received income from the same source (Social Security, pension income, etc.).
- It was discovered that when interviewing married-couple households, some CPS FRs using PAPI consistently reported the male as the householder (the person reported first in the household) and the wife as the second person in the household, regardless of the order given by the respondents. Use of a computer in collecting household roster information made it much more difficult to enter information in an order other than that provided by the respondent. Consequently, a larger proportion of married-couple households in the March 1994 CPS were categorized as having a female householder. The effect of the listing difference will be noticeable in comparing data tabulated by characteristics of the householder.
- In an effort to adapt to continually rising levels of annual income, the March 1994 income supplement was revised to allow for the coding of larger income amounts on selected questionnaire items. The most

notable change occurred in the upper limits of the questions which cover the amount of earnings received from an employer or own business for which the respondent worked the previous calendar year. These upper limits were modified to permit coding of earnings amounts to a maximum of \$999,999. Between March 1986 and March 1993, procedures allowed for coding of amounts to a maximum of \$299,999, and prior to March 1986, procedures allowed for coding of amounts to a maximum of \$99,999. In addition to the increased upper limits for earnings, upper limits for other income items were also changed (see table D-4).

Review of the initial processing of the March 1994 CPS income data began in June 1994. During the review process, it was noted that certain estimates seemed inconsistent with previous years' estimates. Most noticeably, a higher concentration of Social Security recipients was appearing in the lower end of the income distribution. A review of individual Social Security income recipient records seemed to indicate that in some cases monthly amounts, instead of annual amounts, were being recorded. This led to a further review of other income sources. It was discovered that what appeared to be an inordinate number of subannual income amounts were being recorded for other income sources as well. In particular, wages seemed most suspect. To quantify our suspicions, tolerances were developed for each income source (see table D-1) and a special tabulation was run to count the number of cases that appeared out-of-range for March 1994 and March 1993. Table D-2 shows a summary of the results. To correct for the apparent recording errors being made in March 1994, a list of cases with unusually low amounts was developed and a reinterview of these cases was conducted in August 1994. In total, 5,422 cases were targeted for reinterview. Of these, 3,634 reinterviews (67.0 percent) were completed. Table D-3 shows the results of the reinterview process. We then revised the edit process. A proportion of cases targeted, but not reinterviewed, had their amounts adjusted based on likelihood functions derived from completed re-interviewed cases.

The suspected cause for the problems encountered in March 1994 was the lack of familiarity on the part of FRs with the new CASIC instrument. While

provisions were made within the computer instrument to derive annual amounts from reported subannual amounts, apparently this process was not being used properly by some FRs.

To try and eliminate the problem of recording subannual amounts in future March income supplements, the data collection process will undergo modification. First, additional queries will be added to the survey instrument requiring FRs to enter a reporting period for the amount, that is, annual, monthly, bi-weekly, weekly, other. Second, lower and upper income tolerances have been established for income sources. Annual amounts reported outside these tolerances will activate a series of screens indicating to the FR that the amount recorded is suspect and requires verification. The verification should help eliminate any keystroke errors on the part of the FR. Third, FRs that were identified as having an inordinate number of problem cases in 1994 will be contacted to try and isolate the specific nature of their problems. Fourth, the problems encountered in March 1994 will be highlighted in future March training sessions and the correct procedures for entering subannual amounts will be emphasized.

The change in the questionnaire causes a break in the time series for some income measures. Table D-5 shows the effect of the questionnaire revision on selected income measures. Overall, the revision added about \$52.7 billion to the total aggregate income that would have gone undetected had the old upper limits been used. Mean income, per capita income, shares of aggregate income by quintile, and the index of income concentration (Gini index) were all affected by the revisions, and caution should be used when comparing the 1994 data to earlier years. The effect of the revised upper limits on medians was negligible.

In conclusion, the conversion to a completely computer-assisted data collection environment represents a major break in the March CPS data series. As a result, data from the March 1994 CPS are not strictly comparable to earlier years. Additional information on the revisions to the Current Population Survey can be found in Department of Labor, Bureau of Labor Statistics, *Employment and Earnings*, Volume 41, No. 2, February 1994.

**Table D-1. Minimum Dollar Value Tolerances in the March 1994 and March 1993 Current Population Surveys, by Income Source**

Income source	Minimum dollar value tolerances
Wages and Salary <sup>1</sup> . . . . .	\$4.00 per hour/\$2.00 per hour
Social Security . . . . .	\$1,000
Retirement Income . . . . .	\$500
Survivor Income. . . . .	\$500
Disability Income . . . . .	\$500
Supplemental Security Income . . . . .	\$500
Child Support . . . . .	\$200
Alimony . . . . .	\$200
Public Assistance. . . . .	\$50 per month
Veterans' Benefits <sup>2</sup> . . . . .	\$800/\$100

<sup>1</sup>The hourly earnings tolerance was set at \$4.00 per hour for workers reported working 40 or more weeks and 20 or more hours per week, and \$2.00 per hour for everyone else, including those in occupations exempt from minimum wage requirements.

<sup>2</sup>The tolerance for Veterans' benefits received in the form of disability payments was \$800 and \$100 otherwise.

Note: Amounts less than \$12 reported in nonearned income sources were blanked and allocated.

**Table D-2. Out-of-Tolerance Income Cases in the March 1994 and March 1993 Current Population Surveys, by Income Source**

Income source	March 1994 CPS	March 1993 CPS
Wages and Salary . . . . .	4,040	2,115
Social Security . . . . .	936	480
Retirement Income. . . . .	328	274
Survivor Income . . . . .	147	86
Disability Income . . . . .	81	39
Supplemental Security Income . . . . .	266	267

Moved . . . . .	35.7	(X)	(X)	(X)
No Answer. . . . .	23.7	(X)	(X)	(X)
Don't know . . . . .	1.0	(X)	(X)	(X)

X Not applicable.

**Table D-4. Upper Limit Changes for Selected Income Items**

Income Item	New	Old
Earnings of longest job:		
Earnings from employer .....	\$999,999	\$299,999
Self-employment earnings .....	999,999	299,999
Earnings from:		
All other employers .....	999,999	99,999
Other own businesses .....	999,999	99,999
Farm .....	999,999	99,999
Social Security .....	49,999	29,999
Supplemental Security Income .....	24,999	9,999
Public assistance .....	24,999	19,999
Veteran's Benefits .....	99,999	29,999
Education assistance .....	199,998	99,999
Child support .....	49,999	99,999
Alimony .....	49,999	99,999

<sup>1</sup>The upper limit of \$99,998 reflects a combination of the upper limits of Pell Grants and other educational assistance, both with upper limits of \$49,999.

**Table D-5. Comparison of 1993 Income and Poverty Measures for Households, Families, and Persons, by New and Old Upper Limits, Race, and Hispanic Origin**

- Represents zero or rounds to zero.

<sup>1</sup>Persons of Hispanic origin may be of any race.

## Appendix E.

### Source and Accuracy of the Data

#### SOURCE OF DATA

Most estimates in this report come from data obtained in March of the years 1960 through 1994 in the Current Population Survey (CPS). The Bureau of the Census conducts the survey every month, although this report uses only March data for its estimates. Also, some estimates come from 1970, 1980, and 1990 decennial census data. The March survey uses two sets of questions, the basic CPS and the supplements.

**Basic CPS.** The basic CPS collects primarily labor force data about the civilian noninstitutional population. Interviewers ask questions concerning labor force participation about each member 15 years old and over in every sample household.

The present CPS sample was selected from the 1980 decennial census files with coverage in all 50 States and the District of Columbia. The sample is continually updated to account for new residential construction. It is located in 729 areas comprising 1,973 counties, independent cities, and minor civil divisions. About 60,000 occupied housing units are eligible for interview every month. Interviewers are unable to obtain interviews at about 2,600 of these units because the occupants are not found at home after repeated calls or are unavailable for some other reason.

Since the introduction of the CPS, the Bureau of the Census has redesigned the CPS sample several times to improve the quality and reliability of the data and to satisfy changing data needs. A redesigned CPS sample based on the 1990 Census has currently been phased-in. The phase-in procedure started in April 1994 and was completely implemented in July 1995.

Table E-1 summarizes changes in the CPS designs for the years for which data appear in this report.

Table E-1. **Description of the Current Population Survey**

Time period	Number of sample areas	Housing units eligible <sup>1</sup>	
		Interviewed	Not interviewed
1990-94.....	729	57,400	2,600
1989 .....	729	53,600	2,500
1986-88.....	729	57,000	2,500
1985 .....	<sup>2</sup> 629/729	57,000	2,500
1982-84.....	629	59,000	2,500
1980-81.....	629	65,500	3,000
1977-79.....	614	55,000	3,000
1973-76.....	461	46,500	2,500
1972 .....	449	45,000	2,000
1967-71.....	449	48,000	2,000
1963-66.....	357	33,500	1,500
1960-62.....	333	33,500	1,500

<sup>1</sup>Excludes about 2,500 Hispanic households added from the previous November sample. (See "March Supplement.")

<sup>2</sup>The CPS was redesigned following the 1980 Census of Population and Housing. During phase-in of the new design, housing units from the new and old designs were in the sample.

**March Supplement.** In addition to the basic CPS questions, interviewers asked supplementary questions in March about marital status and living arrangements.

To obtain more reliable data for the Hispanic origin population, the March CPS sample was increased by about 2,500 eligible housing units. These housing units were interviewed the previous November and contained at least one sample person of Hispanic origin. In addition, the sample included persons in the Armed Forces living off post or with their families on post.

**Estimation Procedure.** This survey's estimation procedure inflates weighted sample results to independent estimates of the civilian noninstitutional population of

the United States by age, sex, race, origin, and state of residence categories. The independent estimates were based on statistics from decennial censuses of population; statistics on births, deaths, immigration, and emigration; an adjustment for undercoverage in the 1990 Census; and statistics on the size of the Armed Forces.

The independent population estimates used for 1994 to present were based on updates to controls established by the 1990 decennial census. Before 1994, independent population estimates from the most recent decennial census were used. The estimation procedure for the March supplement included a further adjustment so husband and wife of a household received the same weight.

The estimates in this report for 1985 and later also employ a revised survey weighting procedure for persons of Hispanic origin. In previous years, weighted sample results were inflated to independent estimates of the noninstitutional population by age, sex, and race. There was no specific control of the survey estimates for the Hispanic population. Since then, the Bureau of the Census developed independent population controls for the Hispanic population by sex and detailed age groups. Revised weighting procedures incorporate these new controls. The independent population estimates include some, but not all, undocumented immigrants.

## ACCURACY OF ESTIMATES

Since the CPS estimates come from a sample, they may differ from figures from a complete census using the same questionnaires, instructions, and enumerators. A sample survey estimate has two possible types of error: sampling and nonsampling. The accuracy of an estimate depends on both types of error, but the full extent of the nonsampling error is unknown. Consequently, one should be particularly careful when interpreting results based on a relatively small number of cases or on small differences between estimates. The standard errors for

CPS estimates primarily indicate the magnitude of sampling error. They also partially measure the effect of some nonsampling errors in responses and enumeration, but do not measure systematic biases in the data. (Bias is the average, over all possible samples, of the differences between the sample estimates and the desired value.)

**Nonsampling Variability.** There are several sources of nonsampling error including the following:

- Inability to get information about all sample cases.
- Definitional difficulties.
- Differences in interpretation of questions.
- Respondents' inability or unwillingness to provide correct information.
- Respondents' inability to recall information.
- Errors made in data collection, such as recording and coding data.
- Errors made in processing the data.
- Errors made in estimating values for missing data.
- Failure to represent all units with the sample (undercoverage).

CPS undercoverage results from missed housing units and missed persons within sample households. Compared to the level of the 1990 Decennial census, overall CPS undercoverage is about 8 percent. CPS undercoverage varies with age, sex, and race. Generally, undercoverage is larger for males than for females and larger for Blacks and other races combined than for Whites. As described previously, ratio estimation to independent age-sex-race-origin-State population controls partially corrects for the bias due to undercoverage. However, biases exist in the estimates to the extent that

Table E-2. **CPS Coverage Ratios**

Age	Non-Black		Black		All Persons		
	M	F	M	F	M	F	Total
0-14.....	0.929	0.964	0.850	0.838	0.916	0.943	0.929

15+.....	0.914	0.945	0.767	0.874	0.898	0.927	0.918
0+.....	0.918	0.949	0.793	0.864	0.902	0.931	0.921

missed persons in missed households or missed persons in interviewed households have different characteristics from those of interviewed persons in the same age-sex-race-origin-State group.

A common measure of survey coverage is the coverage ratio, the estimated population before ratio adjustment divided by the independent population control. Table E-2 shows CPS coverage ratios for age-sex-race groups for a recent month. The CPS coverage ratios can exhibit some variability from month to month, but these are a typical set of coverage ratios. Other Census Bureau household surveys experience similar coverage.

For additional information on nonsampling error including the possible impact on CPS data when known, refer to Statistical Policy Working Paper 3, *An Error Profile: Employment as Measured by the Current Population Survey*, Office of Federal Statistical Policy and Standards, U.S. Department of Commerce, 1978; and Technical Paper 40, *The Current Population Survey: Design and Methodology*, Bureau of the Census, U.S. Department of Commerce.

**Comparability of Data.** Data obtained from the CPS and other sources are not entirely comparable. This results from differences in interviewer training and experience and in differing survey processes. This is an example of nonsampling variability not reflected in the standard errors. Use caution when comparing results from different sources.

A number of changes were made in data collection and estimation procedures beginning with the January 1994 CPS. The major change was the use of a new questionnaire. The questionnaire was redesigned to measure the official labor force concepts more precisely, to expand the amount of data available, to implement several definitional changes, and to adapt to a computer-assisted interviewing environment. The supplemental questions were also modified for adaptation to computer-assisted interviewing, although there were no changes in definitions and concepts. Due to these and other changes, one should use caution when comparing estimates from data collected in 1994 with estimates from earlier years.

Caution should also be used when comparing estimates in this report, which reflect 1990 census-based population controls. This change in population controls had relatively little impact on summary measures such as means, medians, and percent distributions. It did have a significant impact on levels. For example, use of 1990-based population controls results in about a 1-percent increase in the civilian noninstitutional population and in the number of families and households. Thus, estimates of levels for data collected in 1994 and later years will differ from those for earlier years by more than what

could be attributed to actual changes in the population. These differences could be disproportionately greater for certain subpopulation groups than for the total population.

Since no independent population control totals for persons of Hispanic origin were used before 1985, compare Hispanic estimates over time cautiously.

For more information on the introduction of the new questionnaire, the modernized data collection methods, and the introduction of new population controls based on the 1990 census, see "Revisions in the Current Population Survey Effective January 1994" in the February 1994 issue of *Employment and Earnings* published by the Bureau of Labor Statistics.

**Note When Using Small Estimates.** Summary measures (such as medians and percentage distributions) are shown only when the base is 75,000 or greater. Because of the large standard errors involved, summary measures would probably not reveal useful information when computed on a smaller base. However, estimated numbers are shown even though the relative standard errors of these numbers are larger than those for corresponding percentages. These smaller estimates permit combinations of the categories to suit data users' needs. These estimates may not be reliable for the interpretation of small differences. For instance, even a small amount of nonsampling error can cause a borderline difference to appear significant or not, thus distorting a seemingly valid hypothesis test.

**Sampling Variability.** Sampling variability is variation that occurred by chance because a sample was surveyed rather than the entire population. Standard errors, as calculated by methods described next, are primarily measures of sampling variability, although they may include some nonsampling error.

**Standard Errors and Their Use.** A number of approximations are required to derive, at a moderate cost, standard errors applicable to all the estimates in this report. Instead of providing an individual's standard errors are provided for various types of characteristics. Thus, the tables show levels of magnitude of standard errors rather than the precise standard errors.

Tables E-3 through E-5 provide standard errors of estimated numbers. Tables E-6 and E-7 provide standard errors of estimated percentages. Table E-8 has standard error parameters for persons, families, households, householders, and unrelated individuals. Table E-8 also provides factors to apply to the standard errors in tables E-3 through E-7.

The sample estimate and its standard error enable one to construct a confidence interval. A confidence interval is a range that would include the average result of all possible samples with a known probability. For example, if all possible samples were surveyed under

**Table E-3. Standard Errors of Estimated Numbers:

500.....	58		

essentially the same general conditions and using the same sample design, and if an estimate and its standard error were calculated from each sample, then approximately 90 percent of the intervals from 1.645 standard errors below the estimate to 1.645 standard errors above the estimate would include the average result of all possible samples.

A particular confidence interval may or may not contain the average estimate derived from all possible samples. However, one can say with specified confidence that the interval includes the average estimate calculated from all possible samples.

Some statements in the report may contain estimates followed by a number in parentheses. This number can be added to and subtracted from the estimate to calculate upper and lower bounds of the 90-percent confidence interval. For example, if a statement contains the phrase "grew by 1.7 percent ( $\pm 1.0$ )," the 90-percent confidence interval for the estimate, 1.7 percent, is 0.7 percent to 2.7 percent.

Standard errors may be used to perform hypothesis testing. This is a procedure for distinguishing between population parameters using sample estimates. The most common type of hypothesis appearing in this report is that the population parameters are different. An example of this would be comparing the number of unmarried Blacks to the number of unmarried Whites.

Tests may be performed at various levels of significance. The significance level of a test is the probability of concluding that the characteristics are different when, in fact, they are the same. All statements of comparison in the text have passed a hypothesis test at the 0.10 level of significance or better. This means that the absolute value of the estimated difference between characteristics is greater than or equal to 1.645 times the standard error of the difference. For alternative criteria, consult standard statistical textbooks.

For information on calculating standard errors for labor force data from the CPS which involve quarterly or yearly averages, changes in consecutive quarterly or yearly averages, consecutive month-to-month changes in estimates, and consecutive year-to-year changes in monthly estimates; see "Explanatory Notes and Estimates of Error: Household Data" in the corresponding *Employment and Earnings* published by the Bureau of Labor Statistics.

**Standard Errors of Estimated Numbers.** There are two ways to compute the approximate standard error,  $s_x$ , of an estimated number shown in this report. The first uses the formula

$$s_x = fs \quad (1)$$

where  $f$  is a factor from table E-8, and  $s$  is the standard error of the estimate obtained by interpolation from tables E-3 through E-5. The second method uses formula (2), from which the standard errors in tables E-3 through E-5 were calculated. This formula will provide more accurate results than formula (1).

$$s_x = \sqrt{ax^2 + bx} \quad (2)$$

Here  $x$  is the size of the estimate and  $a$  and  $b$  are the parameters in table E-8 associated with the particular type of characteristic. When calculating standard errors for numbers from cross-tabulations involving different characteristics, use the factor or set of parameters for the characteristic that will give the largest standard error.

*Illustration.* Suppose that 46,503,000 children under 18 years old lived with two parents. Use the appropriate parameters from table E-8 and formula (2) to get:

Number, $x$	46,503,000
a parameter	-0.000024
b parameter	4,818
Standard error	415,000
90% confidence interval	45,820,000 to 47,186,000

The standard error is calculated as

$$s_x = \sqrt{-0.000024x46,503,000^2 + 4,818 \times 46,503,000} = 415,000$$

The 90-percent confidence interval is calculated as  $46,503,000 \pm 1.645 \times 415,000$ .

A conclusion that the average estimate derived from all possible samples lies within a range computed in this way would be correct for roughly 90 percent of all possible samples.

The alternate calculation of the standard error, using formula (1) with  $f=1.0$  from table E-8 and  $s=411,000$  by interpolation from table E-3 is

$$s_x = 1.0 \times 411,000 = 411,000$$

**Standard Errors of Estimated Percentages.** The reliability of an estimated percentage, computed using sample data for both numerator and denominator, depends on the size of the percentage and its base. Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more. When the numerator and denominator of the

percentage are in different categories, use the factor or parameter from table E-8 indicated by the numerator.

The approximate standard error,  $s_{x,p}$ , of an estimated percentage can be obtained by use of the formula

$$s_{x,p} = fs \quad (3)$$

In this formula,  $f$  is the appropriate factor from table E-8, and  $s$  is the standard error of the estimate obtained by interpolation from table E-6 or E-7.

Alternatively, formula (4) will provide more accurate results:

$$s_{x,p} = \sqrt{(b/x)p(100-p)} \quad (4)$$

Here  $x$  is the total number of persons, families, households, or unrelated individuals in the base of the percentage,  $p$  is the percentage ( $0 \leq p \leq 100$ ), and  $b$  is the parameter in table E-8 associated with the characteristic in the numerator of the percentage.

*Illustration.* Suppose of 2,856,000 unmarried-couple households, 1,189,000 or 41.6 percent, are 25 to 34

Table E-6. Standard Errors of Estimated Percentages: Total or White

Base of estimated percentage (thousands)	Estimated percentages						
	1 or 99	2 or 98	5 or 95	10 or 90	25 or 75	35 or 65	50
25.....	4.4	6.1	9.6	13.2	19.0	20.9	21.9
50.....	3.1	4.3	6.8	9.3	13.4	14.8	15.5

Table E-7. Standard Errors of Estimated Percentages: Black or Hispanic Origin

Base of estimated percentage (thousands)	Estimated percentages						
	1 or 99	2 or 98	5 or 95	10 or 90	25 or 75	35 or 65	50
25.....	5.2	7.4	11.5	15.8	22.8	25.1	26.3
50.....	3.7	5.2	8.1	11.2	16.1	17.7	18.6
100.....	2.6	3.7	5.7	7.9	11.4	12.5	13.2
250.....	1.7	2.3	3.6	5.0	7.2	7.9	8.3
500.....	1.2	1.6	2.6	3.5	5.1	5.6	5.9
1,000.....	0.8	1.2	1.8	2.5	3.6	4.0	4.2
2,500.....	0.5	0.7	1.1	1.6	2.3	2.5	2.6
5,000.....	0.4	0.5	0.8	1.1	1.6	1.8	1.9
10,000.....	0.3	0.4	0.6	0.8	1.1	1.3	1.3
15,000.....	0.2	0.3	0.5	0.6	0.9	1.0	1.1
20,000.....	0.2	0.3	0.4	0.6	0.8	0.9	0.9

years old. Use the appropriate parameter from table E-8 and formula (4) to get:

Percentage, p	41.6
Base, x	2,856,000
b parameter	1,912
Standard error	1.3
90% confidence interval	39.5 to 43.7

The standard error is calculated as

$$S_{x,p} = \sqrt{\frac{1,912}{2,856,000} \times 41.6 \times (100 - 41.6)} = 1.3$$

The 90-percent confidence interval for the percentage of unmarried-couple households who are 25 to 34 years old is calculated as  $41.6 \pm 1.645 \times 1.3$ .

The alternate calculation of the standard error, using formula (3), with  $f=0.6$  from table E-8 and  $s=2.0$  by interpolation from table E-6 is

$$S_{x,p} = 0.6 \times 2.0 = 1.2$$

**Standard Error of a Difference.** The standard error of the difference between two sample estimates is approximately equal to

$$S_{x-y} = \sqrt{S_x^2 + S_y^2} \quad (5)$$

where  $S_x$  and  $S_y$  are the standard errors of the estimates,  $x$  and  $y$ . The estimates can be numbers, percentages, ratios, etc. This will represent the actual standard error

quite accurately for the difference between estimates of the same characteristic in two different areas, or for the difference between separate and uncorrelated characteristics in the same area. However, if there is a high positive (negative) correlation between the two characteristics, the formula will overestimate (underestimate) the true standard error.

*Illustration.* Suppose there were 3,155,000 children living with grandparents in 1994 and in 1984 there were 2,306,000. Use the appropriate parameters from table E-8 (the parameters for 1984 are listed below) and formulas (2) and (5) to get:

	x	y	difference
Number	3,155,000	2,306,000	849,000
a parameter	-0.000024	-0.000026	-
b parameter	4,818	5,203	-
Standard error	122,000	109,000	164,000
90% conf. int.	2,954,300 to 3,355,700	2,126,700 to 2,485,300	579,000 to 1,119,000

The standard error of the difference is calculated as

$$S_{x-y} = \sqrt{122,000^2 + 109,000^2} = 164,000$$

The 90-percent confidence interval around the difference is calculated as  $849,000 \pm 1.645 \times 164,000$ . Since this interval doesn't contain zero, we can conclude, at the 90-percent significance level, that the number of children living with grandparents in 1994 is greater than in 1984.

Table E-8. **a and b Parameters and Factors for Calculating Approximate Standard Errors for Persons, Families, Households, Householders, and Unrelated Individuals**

Characteristic	Persons			Families, households, householders, and unrelated individuals

Hispanic origin.....	-0.000113	2,613	0.8	NA	NA	NA
Unemployed:						
Total or White.....	-0.000016	2,465	0.7	NA	NA	NA
Black .....	-0.000191	2,622	0.7	NA	NA	NA
Hispanic origin.....	-0.000191	2,622	0.7	NA	NA	NA
Educational Attainment:						
Total or White.....	-0.000013	2,549	0.7	-0.000011	1,912	0.6
Black .....	-0.000148	3,454	0.8	-0.000071	1,730	0.6
Hispanic origin.....	-0.000189	3,454	0.8	-0.000143	1,730	0.6

NA Not applicable.

**Standard Error of a Ratio.** Certain estimates may be calculated as the ratio of two numbers. The standard error of a ratio,  $x/y$ , may be computed using

$$S_{x/y} = \frac{x}{y} \sqrt{\left[\frac{s_x}{x}\right]^2 + \left[\frac{s_y}{y}\right]^2 - 2r \frac{s_x s_y}{xy}} \quad (6)$$

The standard error of the numerator,  $s_x$ , and that of the denominator,  $s_y$ , may be calculated using formulas described earlier. In formula (6),  $r$  represents the correlation between the numerator and the denominator of the estimate.

For one type of ratio, the denominator is a count of families or households and the numerator is a count of persons in those families or households with a certain characteristic. If there is at least one person with the characteristic in every family or household, use 0.7 as an estimate of  $r$ . An example of this type is the mean number of children per family with children.

For all other types of ratios,  $r$  is assumed to be zero. If  $r$  is actually positive (negative), then this procedure will provide an overestimate (underestimate) of the standard error of the ratio. Examples of this type are the mean number of children per family and the poverty rate.

**NOTE:** For estimates expressed as the ratio of  $x$  per 100  $y$  or  $x$  per 1,000  $y$ , multiply formula (6) by 100 or 1,000, respectively, to obtain the standard error.

*Illustration.* Suppose the ratio of men age 65 to 74, living alone,  $x$ , to women age 65 to 74, living alone,  $y$ , is 31.5 per 100. Use the appropriate parameters from table E-8. The standard error of this ratio is calculated as follows:

	x	y	ratio
Estimate	1,042,000	3,309,000	31.5
a parameter	-0.000024	-0.000024	—
b parameter	4,818	4,818	—
Standard error	71,000	125,000	2.5
90% conf. int.	925,200 to 1,158,800	3,103,400 to 3,514,600	29.0 to 34.0

Using formula (6) with  $r=0$ , the estimate of the standard error is

$$S_{x/y} = 100 \frac{1,042,000}{3,309,000} \sqrt{\left[\frac{71,000}{1,042,000}\right]^2 + \left[\frac{125,000}{3,309,000}\right]^2} = 2.5$$

The 90-percent confidence interval is calculated as  $31.5 \pm 1.645 \times 2.5$ .
