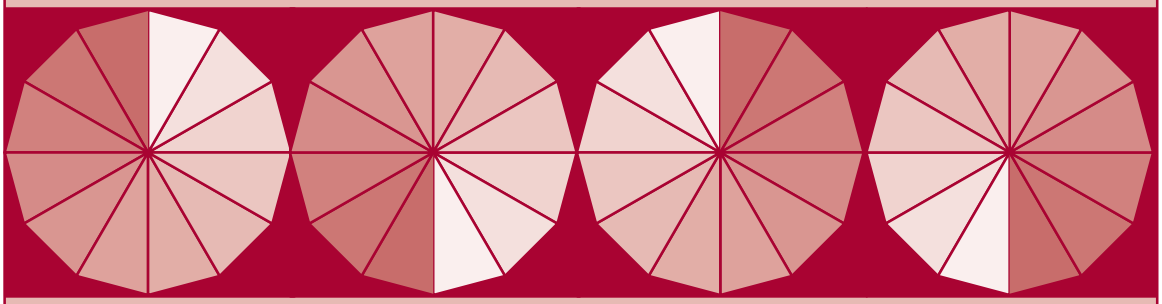
Household and Family Characteristics: March 1994



by Steve Rawlings and Arlene Saluter

U.S. Department of Commerce
Economics and Statistics Administration
BUREAU OF THE CENSUS

Acknowledgments

This report was prepared in Population Division, under the general direction of **Donald J. Hernandez,** Chief, Marriage and Family Statistics Branch.**Catherine K. O'Brien,** provided statistical and clerical assistance. Overall direction was provided by **Robert A. Kominski,** Assistant Chief, Population Division.

The data were collected by Bureau of the Census field representatives, under the direction of **Richard F. Blass,** Acting Chief, Field Division. **David Nguyen** coordinated the programming of the detailed tables in Demographic Surveys Division, and **Ronald R. Tucker** directed survey operations. **Andrew A. Zbikowski** conducted the sampling review in Demographic Statistical Methods Division, and provided the Source and Accuracy Statement (Appendix C).

The staff of Administrative and Publications Services Division, **Walter C. Odom,** Chief, provided publication planning, design, editorial review, composition, and printing planning and procurement. **Nelsa Brown** provided publication coordination and editing.

Household and Family Characteristics: March 1994

INTRODUCTION

This annual report provides detailed, national, demographic data on households and families for March 1994. It compares the most current data with that for households and families for earlier years, and examines some of the major changes in their characteristics and composition.

The estimates are based on the Annual Demographic Supplement to the Current Population Survey. This supplement has been used to collect such data annually since 1947. The 1994 estimates reflect two changes in methodology. First, the data were collected by interviewers using computers instead of paper questionnaires. Previous data on households and families were not based on computer-assisted interviewing techniques. Second, new survey weights based on 1990 Census results (adjusted for the undercoverage of certain population groups) were introduced in 1994. The sample survey results are inflated to national population controls by age, race, sex, and Hispanic origin. The 1993 data were re-estimated using the 1990 Census-based weights to provide ''bridge data'' illustrating the impact of the introduction of the new weights on various counts of household and family units and their characteristics.

The Bureau of the Census produces several products which provide different estimates of the number of households. These include housing estimates which are derived from administrative data used in conjunction with decennial census results and trends measured using the CPS. The estimates based on administrative data represent the most precise estimates for the nation and specific states of the number and size of households by age of householder developed in a fashion consistent with the decennial census. Because the CPS is a housing-unit based population survey, estimates from the CPS are best suited for describing the characteristics of persons living in those households. Users interested in the most accurate count of households should refer to estimates derived from administrative prodedures.[1]

Some of the highlights of the topics discussed in this report are presented below. The numbers in parentheses indicate the 90-percent confidence interval around the estimate, which is the standard used by the Census Bureau for the comparison of statistics based on sample surveys.

- The total number of households in March 1994 was about 97.1 million (±483,000), not significantly greater than the revised total for March 1993.
- Since 1990, the number of households has risen by 1.0 (±0.1) percent per year, compared with increases of 1.4 (±0.05) percent per year for the 1980's and 2.4 (±0.1) percent per year for the 1970's.
- Married-couple families accounted for 55 (± 0.4) percent of all households in 1994, well below their 71 (±0.4) percent share in 1970.
- Persons living alone represented 24 (±0.3) percent of all households in 1994, but the annual rate of increase in their number has slowed substantially since the 1970's.
- There were 11.4 million (±236,000) single parents in 1994, representing about 31 (±0.5) percent of all one-parent and two-parent situations combined.
- Single parents accounted for almost two-thirds, or 65 (±1.3) percent, of all Black family groups with children present in 1994, versus 25 (±0.6) percent among Whites.
- In 1994, there were about 9.9 million (± 220,000) single mothers versus 1.6 million (±89,000) single fathers.
- About 38 (±1.0) percent of single parents in 1994 had never been married, and roughly the same proportion were currently divorced.

The data in this report, with few exceptions, are estimates based on sample surveys, and are subject to sampling variability since they are not based on a complete enumeration of the population. Caution is advised when comparing differences in estimates that are based on a small number of cases, especially if the difference is not large.

All demographic surveys, including the CPS, suffer from undercoverage of the population. This undercoverage results from missed housing units and missed

[1]See Prevost, Ron, *State Housing Unit and Household Estimates: April 1, 1980 to July 1, 1993*, U.S. Bureau of the Census, Current Population Reports, P25-1123, U.S. Government Printing Office, Washington, D.C.

persons within sample households. Compared with decennial census data, overall CPS undercoverage is about 7 percent. Undercoverage varies with age, sex, and race. For some groups such as 20 to 24 year old Black males, the undercoverage is as high as about 35 percent. The weighting procedures used by the Census Bureau partially correct for the bias due to undercoverage. However, its final impact on the estimates is unknown. See appendix C for a more detailed discussion of sampling and how it could affect the estimates for 1994 and earlier years.

GROWTH IN THE NUMBER OF HOUSEHOLDS

According to estimates based on the Current Population Survey, there were 97.1 million households in the United States in March 1994. This was not significantly greater than the corresponding total for March 1993.

Users of these data should remember not to place too much emphasis on changes that occur over any one-year period. For example, between 1988 and 1989, the net increase in total households was 1.8 million, whereas the following year there was no significant increase in the number of households (see appendix table A-2). This illustrates how variable the net increase in households can be from one year to the next. For the decade of the 1980's as a whole, the number of households increased by about 12.6 million, or by an average of about 1.3 million households per year. By comparison, the number of households rose by a total of 17.4 million, or 1.7 million per year during the 1970's. Since 1990 the number of households has been increasing by an average of about 940,000 units per year.

As the numbers above suggest, there has been a decline in the annual rate of growth in the number of households. Between 1970 and 1980, the number of households was increasing by an average of 2.4 percent per year, but from 1980 to 1990 the annual rate of growth averaged only 1.4 percent. Since 1990 the number of households has risen by an average rate of 1.0 percent per year, significantly lower than the rate for the 1970's, and slightly lower than the rate for the 1980's (table A).

The number of households rises or falls not only in response to population increase and decline, but also in reaction to changes in the age composition and living arrangement decisions of the population. Changes in the average age at first marriage, divorce rates, and whether the economic climate is conducive to the formation and maintenance of separate households are among the factors that can have a positive or negative impact on changes in the household total. The net result of these various influences suggest that the current moderate pace of household increase is likely to continue for the remainder of the 1990's.

CHANGES IN HOUSEHOLD COMPOSITION

As defined by the Census Bureau, a household refers to the person or persons who reside in a housing unit. The number of households is synonymous with the number of occupied housing units, but vacant living quarters are not included in the count of households. Consequently, the construction of new housing does not necessarily translate into additional households.

Households exhibit tremendous diversity in their composition. The Census Bureau, however, identifies two basic types of households: 1) family and 2) nonfamily. A family household is comprised of a minimum of two persons. One of those persons is the householder (who usually is the person who owns or rents the living quarters) and at least one of the other occupants is related to the householder by birth, marriage, or adoption. A nonfamily household has no relatives of the householder present in the home, and is often comprised of just one person — the householder (figure 1).

Family households. There were 68.5 million family households in 1994. Families have traditionally accounted for a large majority of households, but their proportion of the total is significantly lower now than it was at various points in the past. In 1940, the first year that household type is available from the Current Population Survey, families accounted for nine out of ten (90 percent) of all households (appendix table A-2). By 1970, about 81 percent of households were maintained by families, down 9 percentage points from their share thirty years earlier. It took only another ten years for the family share of the total to drop another seven points (74 percent of households in 1980). Families still accounted for about seven out of ten households in 1990 (71 percent), and the proportion remained at about the same level in 1994 (table A). Thus, during the 1990's the family household's shrinking share of the household pie has come to at least a temporary halt. The Bureau of the Census recognizes the wide diversity of families. We do, however, differentiate between three broad and basic types of family households: 1) married-couple families, numbering an estimated 53.2 million in 1994, 2) families with female householders (no husband present), 12.4 million, and 3) families with male householders (no wife present), 2.9 million (table A).

Married-couple families represented 55 percent of all households in 1994, a drop of 16 percentage points from their 71 percent share in 1970. Families maintained by women alone increased to 13 percent of households in 1994 versus 9 percent in 1970, and families maintained by men alone accounted for only 3 percent of households in 1994, up only slightly from their 2 percent share in 1970. Households not included in the proportions cited above fall into the category we label as nonfamily households.

Nonfamily households. There were an estimated 28.6 million nonfamily households in 1994 compared with

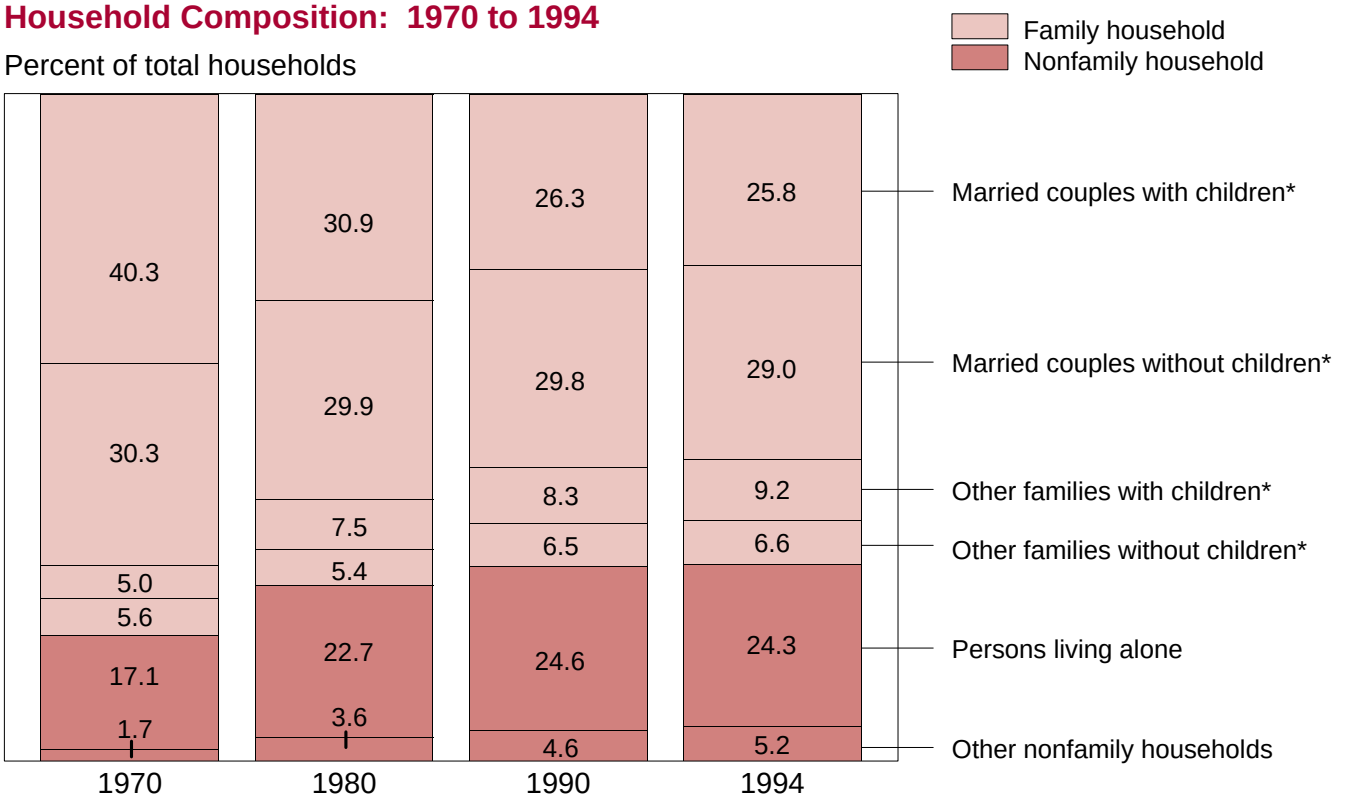
Household Composition: 1970 to 1994

Percent of total households



* Own children under 18

11.9 million in 1970, an increase of 16.7 million. During the same 24-year period, the proportion of all households that were nonfamily households climbed from 19 percent to 30 percent. Although nonfamilies now account for three of every ten households, the rate of increase in the number of this type of household has slowed significantly in recent years. During the 1970's nonfamily households increased at the average annual rate of 5.7 percent per year. Their rate of increase fell to 2.5 percent per year during the 1980's, and has declined further to just 1.2 percent per year during the 1990's.

There was no significant change in the number of nonfamily households between 1992 and 1993, leading us to ponder whether we were on the verge of seeing a reversal in their long-term rise. The boom in the number of nonfamily households has subsided, but the 1994 data indicate that last year's lack of increase was not a precursor of a significant decline in the nonfamily total.

The vast majority of nonfamily households are one-person households. About 83 percent of the 28.6 million nonfamily households in 1994 were people living alone. About 76 percent of male nonfamily householders lived alone which was a significantly lower proportion than the 88 percent of female nonfamily householders living alone in 1994.

All persons living alone represented 24 percent of all households in 1994, up from 17 percent in 1970. As with nonfamily households overall, the number of one-person households increased at a much higher rate in the 1970's (5.2 percent per year) than during the 1980's (2.3 percent per year) or 1990's (0.7 percent per year).

FAMILIES WITH CHILDREN PRESENT IN THE HOME

Families do not necessarily include children. In fact, only about half of American families had one or more children present in the home in 1994. The most recent year in which a majority of families included at least one child among their members was 1982. In these data children are defined as the householder's own children who are under the age of 18, have never been married, and are still living at home.

The number of married-couple families with children declined by almost 1.0 million between 1970 and 1990, and their share of all households dropped by 14 percentage points. The decline in these two-parent families was the net result of the interaction of such factors as increases in age at first marriage and births out-of-wedlock, the postponement of childbearing, high levels

[r] Revised using population controls based on the 1990 Census.

of separation and divorce, and young adults reaching the age at which they leave the parental home and thereby ''empty the nest.'' There were about 25.1 million married-couple families with children in 1994, which represents an increase of about 521,000 since 1990. Thus, the numerical decline in two-parent families that was evident in the 1970's stabilized in the 1980's and appears to have reversed during the 1990's (table B).

There were about 9.0 million additional family households with children present in 1994 that were maintained by mothers alone (7.6 million) or fathers alone (1.3 million). In other words, if the parent had a husband or wife, they were not present in the home. The overall number of these families was just 3.2 million in 1970 with 2.9 million maintained by mothers and 341,000 by fathers. These families comprise the major component of single-parent family groups, and will be examined in more detail in a later section of the report.

About 13.8 million families in 1994 had only one child, compared with 9.4 million in 1970. The number of these families increased by 2.9 percent per year during the 1970's, but the rate of increase fell to only 0.8 percent per year during the 1980's, and has remained at a similarly low level during the 1990's (0.5 percent per year). These data refer to children present in the home at the time of the survey, and do not represent the number of families with ''only children.'' Although an unknown number of such families would be included, families which had once had two or more children would also be included if only one child were still living at home.

The number of families with two children at home in 1994, 13.8 million, was approximately the same as the number with one child. The number of two-child families is up from 8.9 million in 1970.

Larger families with 3 or more children at home, in contrast to smaller families with just one or two children, are not as prevalent as in 1970, but have shown recent signs of a slight resurgence. The number of these larger families fell from 10.4 million in 1970 to 6.5 million in 1990, but have rebounded to 7.1 million in 1994.

NUMBER OF PERSONS PER HOUSEHOLD

The ups and downs in the numbers and proportions of different types of households and their changing composition over the years have contributed to changes in the average number of persons per household. In 1790, the earliest year for which we have data on household size, there were 5.79 persons per household. By 1900, there were 4.76 persons per household. Thus, the average had declined by about one member per household over a period of 110 years. It took only another 40 years for household size to drop an additional person (3.76 persons per household in 1940).

There were 3.14 persons per household in 1970 versus 2.76 persons in 1980, and 2.63 persons in 1990. The fact that household size declined more substantially between 1970 and 1980 (0.38 persons) than it did between 1980 and 1990 (0.13 persons) is a reflection of a variety of well-recognized trends that characterized the 1970's. These trends included the postponement of marriage, changing patterns of childbearing, the increase in divorce often leading to the break up of larger households and the emergence of more one-person and single-parent situations. Most, if not all of these changes continued throughout the 1980's, but the pace of change stabilized and resulted in a more moderate drop in household size for the decade (figure 2).

There were 2.62 persons per household in 1989 (appendix table A-1). There has been no further drop in household size since. Average household size for 1993 was originally estimated to be 2.63 persons. The revised average for 1993 was 2.66 persons. This ''increase'' of 0.03 persons per household is felt to have resulted primarily from the introduction of the adjusted 1990 Census population controls. These new controls had the effect of disproportionately increasing the total population in households without a commensurate increase in the number of households. Consequently, the revision resulted in an increase in the household size estimate. There were 2.67 persons per household in 1994, which was not significantly higher than the revised average for 1993 (table C).

The proportion of larger households (those with five persons or more) was 21 percent in 1970, compared with 11 percent in 1994. Medium-sized households comprised of three or four persons accounted for about one-third of households in both 1970 and 1994. Meanwhile, the smallest households with only one or two persons increased their share of the total from 46 percent to 56 percent (figure 3).

The number of one-person households increased at a higher rate than any other household size during the 1970's and 1980's. Their rate of increase has, however, slowed dramatically in response to such factors as changes in the age structure of the population and the stabilization of the divorce rate. Consequently, since 1990 the rate of increase for one-person households was about the same as that for households in general.

It remains to be seen whether or not the long-term pattern of shrinkage in household size has ended or is simply resting at a temporary plateau. Earlier projections suggested that household size would be between 2.32 persons and 2.64 persons in the year 2000. Given the recent lack of decline in this measure, it seems likely that household size in the year 2000 will end up closer to the upper end of the range of sizes projected. New household projections are being prepared, and are expected to be released later this year.

HOUSEHOLDERS BY AGE

Householders, by Census definition, must be at least 15 years of age. Persons who form households generally do so as young adults in their twenties, and they

continue to maintain a household of one type or another as they grow older. The median age of persons maintaining households in 1994 was 45.7 years (table D). In other words half were between 15 and 45.7 years of age, and half were older.

The age composition of householders alters in response to changes in household composition such as a rise in young single parents or an increase in elderly persons living alone. The median age of householders, however, is also affected by changes in the basic underlying age structure.

The age structure of our population continues to be affected in a major way by the Baby Boom and its aftermath. Those born after World War II during the years between 1946 and 1964 are generally considered to be members of the post-war Baby-Boom generation.

- Zero or rounds to zero. [r] Revised using population controls based on the 1990 Census. X Not applicable.

As it ages, the disproportionately large size of this group has had an impact on everything from the demand for classroom space, to housing and job needs.

The leading edge of the Baby-Boom generation began forming their first households during the 1960's. By 1990, Baby Boomers ranged from 26 to 44 years of age. This group accounted for a disproportionately large number of households formed during the two decades between 1970 and 1990. As they increased their share of the total, the median age of householders responded by dropping from 48.1 years to 45.3 years during the same period.

The last of the Baby Boomers turned age 30 in 1994. Most of those who will form households are likely to have done so. As this large segment of the population continues to grow older, and is replaced by the comparatively smaller generation that follows, we would expect the median age of householders to reverse its decline. There is some evidence that this turnaround has begun, as the median age of householders has increased slightly since 1990.

Between 1990 and 1994, the number of households maintained by persons 45 to 54 years of age increased at an average rate of 3.7 percent per year. This was a higher rate of increase than that for any other age category, and was significantly higher than the corresponding rates of increase for this age group in the 1970's (0.4 percent per year) or the 1980's (1.4 percent per year).

The median age of those maintaining family households in 1994 was much lower (44.5 years) than that for persons maintaining nonfamily households (50.4 years). The fact that family householders were an average of 5.9 years younger than nonfamily counterparts is attributable to the fact that family householders include many young parents raising children, whereas nonfamily householders are likely to include such persons as elderly widows living alone.

Approximately one-third (34 percent) of nonfamily householders in 1994 were age 65 years or older compared with 44 percent of the nonfamily householders in 1970. The 10-percentage-point decline in the elderly householder proportion was reflected in the 11.9 year drop in the median age of nonfamily householders from 62.3 years in 1970 to 50.4 years in 1994.

RACE AND ETHNIC DIFFERENTIALS IN FAMILY COMPOSITION

In 1994, about 85 percent of the 68.5 million family households were maintained by White householders, 12 percent by Black householders, and 3 percent by householders of other races (primarily Asians and Pacific Islanders). Approximately 9 percent of family households were maintained by Hispanic householders. Hispanics constitute an ethnic group rather than a racial category, and their members may classify themselves as White, Black, or of some other race. The comparative proportions in 1970 were 90 percent White, 9 percent Black, and 1 percent of some other race; while 4 percent were Hispanic (table E).

There are significant racial and ethnic differences in family composition (figure 4). About 82 percent of the 57.9 million White family households in 1994 were maintained by married couples, 14 percent by females with no husband present, and 4 percent by males with no wife present. By contrast, only 47 percent of the 8.0 million Black family households (with or without children present) were maintained by married couples, an almost equal percentage (48 percent) were maintained by female householders with no husband present, and 6 percent by males with no wife present.

1994 was the first year in which Black family households maintained by women alone were not outnumbered by those maintained by married couples. Since 1970, the average annual rate of increase in the number of these Black female family householders has been significantly higher than for married-couple families. During the 1970's, the average increase was 6.1 percent per year for Black female family householders compared with only 0.3 percent per year for Black married-couple families. Between 1990 and 1994, the average increase slowed to 3.9 percent per year for families maintained by women alone, while married-couple families declined 0.2 percent per year.

There were an estimated 1.7 million family households in 1994 that were maintained by persons in the Asian or Pacific Islander racial category (API's). Married-couple families accounted for about 82 percent of the total, which was approximately the same share as among White family households.

About 5.9 million family households in 1994 were maintained by Hispanics, up from 2.0 million in 1970 (an increase of 196 percent). About 68 percent of the Hispanic family households in 1994 were maintained by married couples. This proportion was significantly lower than for Whites overall, and higher than that for Blacks overall. However, since Hispanics may be of any race, care should be exercised when comparing their family composition to that of Whites, Blacks, or those of other races.

RISE IN SINGLE PARENTS

One of the most important changes in the composition of the American family has been the tremendous increase in the number of single parents. The rise of the single parent has had a profound impact on the life experiences not only of those parents, but also of their children, related family members, and the public at large.

During the period prior to 1970, the increase in single parents was relatively moderate. Divorce rates had begun to rise during the late 1950's, and this, along with

NA Not available.

other factors, contributed to the initial enlargement of the pool of single parents. It was during the 1970's that their number began to increase at rates which could not escape notice. The number of single parents went from 3.8 million in 1970 to 6.9 million in 1980, thereby increasing at an average rate of 6.0 percent per year. By 1990, there were 9.7 million single parents, but their average rate of increase was a more moderate 3.4 percent per year for the 1980's. There were an estimated 11.4 million single parents in 1994, and their number has been increasing during the 1990's by about 3.9 percent per year, a rate not significantly different from that for the 1980's. Thus, single parents continue to increase, but at much more moderate rates than the during the 1970's (table F).

About three out of ten, or 31 percent of all parent-child living arrangements (two-parent and one-parent combined) were accounted for by one-parent situations in 1994, compared with 13 percent of the total in 1970. About half of this 18 percentage-point increase in the single-parent share occurred between 1970 and 1980.

* May be of any race.

Estimates of the number of single parents for a particular point in time may differ depending on the concept underlying the number. Single parents, as defined in this section of the report, refer to family groups comprised of parents with one or more of their children under 18 years of age in residence. Single parents are not restricted just to those family householders that own or rent their own home. Many single parents live with and share a household that may belong to their parents, other relatives, or a friend or acquaintance. In some unknown number of instances two or more single mothers and/or single fathers may share the same family household.

The Census Bureau uses the phrase ''single-parent family group'' to encompass not only single parents maintaining family households, but also those in related and unrelated subfamilies sharing someone else's household. In 1994, there were 9.0 million single-parent householders, 1.8 million single parents as part of a related subfamily living in a relative's home, and 650,000 single parents in unrelated subfamilies living in the home of a nonrelative. The 2.5 million single parents in subfamilies represented 21 percent of all 11.4 million single parents in 1994 (table G).

Race and ethnic origin of single parents. About 7.3 million, or 64 percent of all single parents in 1994 were White, but the incidence of one-parent situations is much higher among Blacks than Whites (figure 5). Single parents accounted for almost two-thirds (65 percent) of all Black family groups with children present (one and two parent situations combined), compared with 25 percent among Whites. In 1970, the corresponding proportions were 36 percent for Blacks and 10 percent for Whites.

There were about 3.6 million Black single parents in 1994, up from 3.1 million in 1990, 2.1 million in 1980,

and 1.1 million in 1970. Although the number continues to rise, the average annual rate of increase dropped from 6.1 percent per year during the 1970's to 3.8 percent per year during the 1980's. Since 1990, the rate of increase has been about 4.1 percent per year which was not significantly higher than during the 1980's. Thus, the number of Black single parents continues to rise, but at a more moderate pace than during the 1970's.

About 1.6 million single parents in 1994 were persons of Hispanic origin, compared with 1.3 million in 1990 and 568,000 in 1980. Comparable data for Hispanic single parents were not available for 1970. The number of Hispanic single parents has increased by an average of 8.2 percent per year since 1990, not significantly higher than the 7.0 percent per year increase between 1980 and 1990. Single parents accounted for about 36 percent of all Hispanic family groups with children present in 1994. Data users should exercise caution in making comparisons with Whites or Blacks, since Hispanics may be in any racial category.

Sex and marital status of single parents. Mothers account for the vast majority of single parents. In 1994, there were about 9.9 million single mothers versus 1.6 million single fathers (table H). Thus, single mothers represented 86 percent of all single parents, which was about the same as their share in 1990 and only slightly lower than their proportion in 1970 and 1980 when they accounted for 90 percent of single parents.

Single fathers are more common among Whites than Blacks. In 1994, fathers accounted for 16 percent of White single parents versus 8 percent among Blacks. The corresponding single-father proportions in 1970 were somewhat lower for Whites (12 percent), but were not significantly lower for Blacks (7 percent).

Single parents may be of any marital status except ''married, spouse present.'' Men and women generally become single parents as a result of one or more of the following events: 1) births out of wedlock, 2) separation, 3) divorce, or 4) widowhood. Most single parents are accounted for by those who either have never been

married or are currently divorced. In 1994, about 38 percent of single parents were never-married, and roughly the same proportion (38 percent) were divorced. These two marital status categories combined accounted for three of every four single parents. Relatively smaller proportions of single parents in 1994 were either married but not living with their spouse (20 percent) or widowed (5 percent).

RELATED REPORTS

A companion report entitled *Marital Status and Living Arrangements: March 1994* (Current Population Reports, Series P20-484, forthcoming in 1995) presents data using persons, rather than households or families, as the unit of analysis. The marital status of adults, age at first marriage, persons living alone, unmarried couples, and living arrangements of children are among the topics included in the report.

Data on children in nuclear families, extended families (including multi-generational families), stepfamilies, and adoption are included in *The Diverse Living Arrangements of Children: Summer 1991*, Current Population Reports, Series P70, No. 38, 1994. A brief summary of demographic and economic information pertaining to children is also available in *We, the American Children,* WE-10, 1993. This report uses a series of graphs and accompanying text to illustrate trends, and compare the 1990 Census data with that from earlier censuses.

Characteristics of households that remain intact, dissolve, and/or are newly formed are presented in *When Households Continue, Discontinue, and Form,* Current Population Reports, Series P23-179, 1992. The most current information on the marital history of the population may be found in *Marriage, Divorce, and Remarriage in the 1990's*, Current Population Reports, Series P23-180, 1992. A chartbook illustrating important trends

that have influenced the circumstances of households, families, and children is available in *Households, Families, and Children: A Thirty Year Perspective*, Current Population Reports, Series P23-181, 1992. The most current state household estimates are published in *State Housing Unit and Household Estimates: April 1, 1980, to July 1, 1993*, Current Population Reports, Series P25-1123, 1994. Projections of the number of households are available in a new report entitled *Projections of the Number of Households and Families: 1994 to 2010*, Current Population Reports, Series P25, forthcoming in 1995.

For years prior to 1994, survey based data on households, families, marital status, and living arrangements have been published in Current Population Reports, Series P20, P23, and P25. A complete listing of these reports for earlier years may be found in appendix E.

Household data for specific subnational geographic areas is generally available in the decennial census. The 1990 Census of Population and Housing provides the most current detailed data for states, counties, metropolitan areas, cities and towns.

Appendix B.
Definitions and Explanations

Coverage. The 1994 population in this report includes the civilian noninstitutional population of the United States plus approximately 957,000 members of the Armed Forces in the United States living off post or with their families on post, but excludes all other members of the Armed Forces.

Symbols. A dash (-) represents zero or rounds to zero. The symbol ''B'' means that the base for the derived figure is less than 75,000. An ''X'' means not applicable, and ''NA'' means not available.

Rounding of estimates. Individual figures are rounded to the nearest thousand without being adjusted to group totals, which are independently rounded; percentages are based on the unrounded numbers.

Metropolitan-nonmetropolitan residence. The population residing in metropolitan statistical areas (MSA's) constitutes the metropolitan population. MSA's are defined by the Office of Management and Budget for use in the presentation of statistics by agencies of the Federal Government. An MSA is a geographic area consisting of a large population nucleus, together with adjacent communities which have a high degree of economic and social integration with that nucleus. The definitions specify a boundary around each large city so as to include most or all its suburbs. Entire counties form the MSA building blocks, except in New England where cities and towns are used. The former term SMSA was changed to MSA in 1983.

An area qualifies for recognition as an MSA if (1) it includes a city of at least 50,000 population, or (2) it includes a Census Bureau-defined urbanized area of at least 50,000 with a total metropolitan population of at least 100,000 (75,000 in New England). In addition to the county containing the main city or urbanized area, an MSA may include other counties having strong commuting ties to the central county. If specified conditions are met, certain large MSA's are designated as consolidated MSA's (CMSA's) and divided into component primary MSA's (PMSA's).

In July 1985, the CPS began carrying the metropolitan statistical area definitions announced by the Office of Management and Budget on June 30, 1984. Figures published from the CPS in the early 1980's and throughout most of the 1970's referred to metropolitan areas as defined on the basis of the 1970 census. Since there are important differences in the population classified as metropolitan using the 1970 and 1984 definitions, comparisons should be avoided.

The new CPS metropolitan estimates have consistently been higher than independent estimates of the metropolitan population prepared by the Census Bureau; the new CPS nonmetropolitan estimates have been lower than the independent estimates. The apparent overestimation of metropolitan and underestimation of nonmetropolitan population in the CPS relative to the Census Bureau's independent estimates should be taken into account when using the data.

Age. The age classification is based on the age of the person at the person's last birthday. The adult universe (i.e., population of marriageable age) now comprises persons 15 years old and over. Prior to 1980 the adult universe was 14 years old and over.

Race. The population is divided into three groups on the basis of race: White, Black, and other races. The last category includes Indians, Japanese, Chinese, and any other race except White and Black.

Persons of Hispanic origin. Persons of Hispanic origin in this report were determined on the basis of a question that asked for self-identification of the person's origin or descent. Respondents were asked to select their origin (or the origin of some other household member) from a ''flash card'' listing ethnic origins. Persons of Hispanic origin, in particular, were those who indicated that their origin was Mexican, Puerto Rican, Cuban, Central or South American, or some other Hispanic origin. Persons of Hispanic origin may be of any race.

Marital status. The marital status classification identifies four major categories: never married, married, widowed, and divorced. These terms refer to the marital status at the time of the enumeration.

The category ''married'' is further divided into ''married, spouse present,'' ''separated,'' and ''other married, spouse absent.'' A person was classified as ''married, spouse present'' if the husband or wife was reported as a member of the household, even though he or she may have been temporarily absent on business or on vacation, visiting, in a hospital, etc., at the time of the enumeration. Persons reported as separated included those with legal separations, those living apart with intentions of obtaining a divorce, and other persons permanently or temporarily separated because of marital discord. The group ''other married, spouse absent''

includes married persons living apart because either the husband or wife was employed and living at a considerable distance from home, was serving away from home in the Armed Forces, had moved to another area, or had a different place of residence for any other reason except separation as defined above.

Household. A household consists of all the persons who occupy a housing unit. A house, an apartment or other group of rooms, or a single room, is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters; that is, when the occupants do not live and eat with any other persons in the structure and there is direct access from the outside or through a common hall.

A household includes the related family members and all the unrelated persons, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone in a housing unit, or a group of unrelated persons sharing a housing unit as partners, is also counted as a household. The count of households excludes group quarters.

Group quarters. As of 1983, group quarters were defined in the Current Population Survey as noninstitutional living arrangements for groups not living in conventional housing units or groups living in housing units containing ten or more unrelated persons or nine or more persons unrelated to the person in charge. (Prior to 1983, group quarters included housing units containing five or more persons unrelated to the person in charge.) Examples of persons in group quarters include a person residing in a rooming house, in staff quarters at a hospital, or in a halfway house. Beginning in 1972, inmates of institutions have not been included in the Current Population Survey.

Householder. The householder refers to the person (or one of the persons) in whose name the housing unit is owned or rented (maintained) or, if there is no such person, any adult member, excluding roomers, boarders, or paid employees. If the house is owned or rented jointly by a married couple, the householder may be either the husband or the wife. The person designated as the householder is the ''reference person'' to whom the relationship of all other household members, if any, is recorded.

Prior to 1980, the husband was always considered the householder in married-couple households. The number of householders is equal to the number of households. Also, the number of family householders is equal to the number of families.

Head versus householder. Beginning with the 1980 CPS, the Bureau of the Census discontinued the use of the terms ''head of household'' and ''head of family.'' Instead, the terms ''householder'' and ''family householder'' are used. Recent social changes have resulted in greater sharing of household responsibilities among the adult members and, therefore, have made the term ''head'' increasingly inappropriate in the analysis of household and family data. Specifically, the Census Bureau has discontinued its longtime practice of always classifying the husband as the reference person (head) when he and his wife are living together.

In this report, the term ''householder'' is used in the presentation of data that had previously been presented with the designation ''head.'' The householder is the first adult household member listed on the questionnaire. The instructions call for listing first the person (or one of the persons) in whose name the home is owned or rented. If a home is owned jointly by a married couple, either the husband or the wife may be listed first, thereby becoming the reference person, or householder, to whom the relationship of other household members is to be recorded.

Reference person. The reference person is the person with regard to whom the relationship of other persons in the household is recorded. The household reference person is the person listed as the householder (see definition of ''Householder''). The subfamily reference person is either the single parent or the husband/wife in a married-couple situation.

Family. A family is a group of two persons or more (one of whom is the householder) related by birth, marriage, or adoption and residing together; all such persons (including related subfamily members) are considered as members of one family. Beginning with the 1980 CPS, unrelated subfamilies (referred to in the past as secondary families) are no longer included in the count of families, nor are the members of unrelated subfamilies included in the count of family members.

Family household. A family household is a household maintained by a family (as defined above), and any unrelated persons (unrelated subfamily members and/or secondary individuals) who may be residing there are included. The number of family households is equal to the number of families. The count of family household members differs from the count of family members, however, in that the family household members include all persons living in the household, whereas family members include only the householder and his/her relatives. See the definition of family.

Stepfamily. In this report a stepfamily is a married-couple family household with at least one child under age 18 who is a stepchild (i.e., a son or daughter through marriage, but not by birth) of the householder.

Related subfamily. A related subfamily is a married couple with or without children, or one parent with one or more own never-married children under 18 years old, living in a household and related to, but not including, the person or couple who maintains the household. One

example of a related subfamily is a young married couple sharing the home of the husband's or wife's parents. The number of related subfamilies is not included in the count of families.

Unrelated subfamily. An unrelated subfamily (formerly called a secondary family) is a married couple with or without children, or a single parent with one or more own never-married children under 18 years old living in a household. Unrelated subfamily members are not related to the householder. An unrelated subfamily may include persons such as guests, partners, roommates, or resident employees and their spouses and/or children. The number of unrelated subfamily members is included in the total number of household members, but is not included in the count of family members.

Beginning in 1989, any person(s) who is not related to the householder and who is not the husband, wife, parent, or child in an unrelated subfamily is counted as an unrelated individual.

Family group. A family group is any two or more persons (not necessarily including a householder) residing together, and related by birth, marriage, or adoption. A household may be composed of one such group, more than one, or none at all. The count of family groups includes family households, related subfamilies, and unrelated subfamilies.

Married couple. A married couple, as defined for census purposes, is a husband and wife enumerated as members of the same household. The married couple may or may not have children living with them. The expression ''husband-wife'' or ''married-couple'' before the term ''household,'' ''family,'' or ''subfamily'' indicates that the household, family, or subfamily is maintained by a husband and wife. The number of married couples equals the count of married-couple families plus related and unrelated married-couple subfamilies.

Unmarried couple. An unmarried couple is composed of two unrelated adults of the opposite sex (one of whom is the householder) who share a housing unit with or without the presence of children under 15 years old.

Unrelated individuals. Unrelated individuals are persons of any age who are not members of families or subfamilies.

Nonfamily householder. A nonfamily householder is a person maintaining a household while living alone or exclusively with persons to whom they are not related.

Secondary individuals. Secondary individuals are persons of any age who reside in a household, but are not related to the householder (except unrelated subfamily members). Persons who reside in group quarters are also secondary individuals. Examples of a secondary individual include (1) a guest, partner, roommate, or resident employee; (2) a foster child; or (3) a person residing in a rooming house, a halfway house, staff quarters at a hospital, or other type of group quarters.

Own children and related children. ''Own'' children in a family are sons and daughters, including stepchildren and adopted children, of the householder. Similarly, ''own'' children in a subfamily are sons and daughters of the married couple or parent in the subfamily. (All children shown as members of related subfamilies are own children of the person(s) maintaining the subfamily.) ''Related'' children in a family include own children and all other children in the household who are related to the householder by birth, marriage, or adoption. For each type of family unit identified in the CPS, the count of own children under 18 years old is limited to never-married children; however, ''own children under 25'' and ''own children of any age,'' as the terms are used here, include all children regardless of marital status. The totals include never-married children living away from home in college dormitories.

The count of related children in families was formerly restricted to never-married children. However, beginning with data for 1968 the Bureau of the Census includes ever-married children under the category of related children. This change added approximately 20,000 children to the category of related children in March 1968.

Tenure. A housing unit is ''owned'' if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for. A cooperative or condominium unit is ''owned only if the owner or co-owner lives in it. All other occupied units are classified as ''rented,'' including units rented for cash rent and those occupied without payment of cash rent.

Size of household, family, or subfamily. The term ''size of household'' includes all persons occupying a housing unit. ''Size of family'' includes the family householder and all other persons in the living quarters who are related to the householder by birth, marriage, or adoption. ''Size of related subfamily'' includes the husband and wife or the lone parent and their nevermarried sons and daughters under 18 years of age. ''Size of unrelated subfamily'' includes the reference person and all other members related to the reference person. If a family has a related subfamily among its members, the size of the family includes the members of the related subfamily.

Units in structure. In the determination of the number of units in a structure, all housing units, both occupied and vacant, were counted. The statistics are presented in terms of the number of occupied housing units in structures of specified size, not in terms of the number of residential structures.

Years of school completed. In this report, data on years of school completed were derived from the combination of answers to two questions, (a) ''What is the

highest grade of school that the person has attended?" and (b) "Did the person finish this grade?"

The questions on educational attainment applied only to progress in "regular" schooling. Such schools include public, private, and parochial schools (elementary, junior and senior high), colleges, universities, and professional schools, whether day schools or night schools. Thus, "regular" schools is that which advances a person toward an elementary or professional school degree. Schooling in other than regular schools was counted only if the credits obtained were regarded as transferable to a school in the regular school system.

Labor force and employment status. The definitions of labor force and employment status in this report are related to the population 15 years and over. Persons shown here are classified as in the labor force if they were employed as civilians, unemployed, or in the Armed Forces during the survey week.

Employed. Employed persons comprise (1) all persons who, during the specified week, did any work at all as paid employees or in their own business or profession, or on their own farm, or who worked 15 hours or more as unpaid workers on a farm or in a business operated by a member of the family, and (2) all those who were not working but who had jobs or businesses from which they were temporarily absent because of illness, bad weather, vacation, or labor management dispute, or because they were taking time off for personal reasons, whether or not they were paid by their employers for time off, and whether or not they were seeking other jobs. Excluded from the employed group are persons whose only activity consisted of work around the house (own home housework, painting or repairing own home, etc.) or volunteer work for religious, charitable, and similar organizations.

Unemployed. Unemployed persons are those who, during the survey week, had no employment but were available for work and (1) had engaged in any specific job-seeking activity within the past 4 weeks, such as registering at a public or private employment office, meeting with prospective employers, checking with friends or relatives, placing or answering advertisements, writing letters of application, or being on a union or professional register; (2) were waiting to be called back to a job from which they had been laid off; or (3) were waiting to report to a new wage or salary job within 30 days.

Not in the labor force. All those who are not classified as employed or unemployed are defined as "not in the labor force." This group who are neither employed nor seeking work includes persons engaged only in own home housework, attending school, or unable to work because of long-term physical or mental illness; persons who are retired or too old to work, seasonal workers for whom the survey week fell in an off season, and the voluntary idle. Persons doing only unpaid family work (less than 15 hours) are also classified as not in the labor force.

Income. Data on income cover money income only, prior to deduction for taxes, received from such sources as wages or salaries, net income from self-employment, Social Security, dividends, interest, public assistance and welfare, unemployment compensation, government pensions, and veterans payments. Certain money receipts such as capital gains are not included. For a more detailed explanation of income, see Bureau of the Census, Current Population Reports, Series P-60.

Poverty. The poverty definition used here is that adopted for official Government use by the Office of Management and Budget and consists of a set of money income thresholds that vary by family size and composition. Families or individuals with income below a particular threshold are classified as below the poverty level. The poverty thresholds are updated every year to reflect changes in the Consumer Price Index. These thresholds are based on money income only and do not include the value of noncash benefits such as employer-provided health insurance, food stamps, or Medicaid. For a more detailed explanation, see Bureau of the Census, Current Population Reports, Series P-60.

Undocumented immigrants. The 1980 census counted about 2 million undocumented immigrants according to Census Bureau estimates. Beginning in January 1986, the independent population controls included an allowance for growth in the undocumented population for every year since 1980. This methodological change was partially offset by another change that increased the allowance for emigration of legal residents. Data shown for Current Population Surveys with controls based on pre-1986 methods have not been revised to take into account these methodological changes. Consequently, direct comparisons of CPS figures for months before January 1986 with later months will not be consistent. Series P-25, No. 985 reviews the postcensal population estimates methodology currently in use.

Appendix C.
Source and Accuracy of Estimates

SOURCE OF DATA

Most estimates in this report come from data obtained in March of years 1970 through 1994 in the Current Population Survey (CPS). The Bureau of the Census conducts the survey every month, although this report uses mostly March data for its estimates. Also, some estimates come from 1970 and 1980 decennial census data. The March survey uses two sets of questions, the basic CPS and the supplement.

Basic CPS. The basic CPS collects primarily labor force data about the civilian noninstitutional population. Interviewers ask questions concerning labor force participation about each member 15 years old and over in every sample household.

The present CPS sample was selected from the 1980 Decennial Census files with coverage in all 50 states and the District of Columbia. The sample is continually updated to account for new residential construction. The United States was divided into 1,973 geographic areas. In most states, a geographic area consisted of a county or several contiguous counties. In some areas of New England and Hawaii, minor civil divisions are used instead of counties. A total of 729 geographic areas was selected for sample. About 60,000 occupied households are eligible for interview every month. Interviewers are unable to obtain interviews at about 2,600 of these units. This occurs when the occupants are not found at home after repeated calls or are unavailable for some other reason.

Since the introduction of the CPS, the Bureau of the Census has redesigned the CPS sample several times. These redesigns have improve the quality and accuracy of the data and and have satisfied changing data needs. The most recent changes were completely implemented in July 1985.

Table C-1 summarizes changes in the CPS designs for the years for which data appear in this report.

CPS March Supplement. In addition to the basic CPS questions, interviewers asked supplementary questions in March about households, families, marital status, and living arrangements.

To obtain more reliable data for the Hispanic origin population, the March CPS sample was increased by about 2,500 eligible housing units, interviewed the previous November, that contained at least one sample person of Hispanic origin. In addition, the sample included persons in the Armed Forces living off post or with their families on post.

Table C-1. **Description of the March Current Population Survey**

Time Period	Number of Sample Areas	Housing Units eligible[1]	
		Interviewed	Not Interviewed
1990 to 1994	729	57,400	2,600
1989	729	53,600	2,500
1986 to 1988	729	57,000	2,500
1985	[2]629/729	57,000	2,500
1982 to 1984	629	59,000	2,500
1980 to 1981	629	65,500	3,000
1977 to 1979	614	55,000	3,000
1973 to 1976	461	46,500	2,500
1972	449	45,000	2,000
1967 to 1971	449	48,000	2,000
1963 to 1966	357	33,500	1,500
1960 to 1962	333	33,500	1,500
1957 to 1959	330	33,500	1,500
1954 to 1956	230	21,000	500 to 1,000
1947 to 1953	68	21,000	500 to 1,000

[1]Excludes about 2,500 Hispanic households added from the previous November sample. (See "*CPS March Supplement.*")

[2]The CPS was redesigned following the 1980 Decennial Census of Population and Housing. During phase-in of the new design, housing units from the new and old designs were in the sample.

CPS Estimation Procedure. This survey's estimation procedure inflates weighted sample results to independent estimates of the civilian noninstitutional population of the United States by age, sex, race and Hispanic/non-Hispanic categories. The independent estimates were based on statistics from decennial censuses of population; statistics on births, deaths, immigration and emigration; and statistics on the size of the Armed Forces. The independent population estimates used for 1980 to present were based on updates to controls established by the 1980 Decennial Census. Data previous to 1980 were based on independent population estimates from the most recent decennial census. For more details on the change in independent estimates, see the section

entitled ‘‘Introduction of 1980 Census Population Controls’’ in an earlier report (Series P-60, No. 133). The estimation procedure for the March supplement included a further adjustment so that husband and wife in a household received the same weight.

The estimates in this report for 1984 and later also employ a revised survey weighting procedure for persons of Hispanic origin. In previous years, weighted sample results were inflated to independent estimates of the noninstitutional population by age, sex, and race. There was no specific control of the survey estimates for the Hispanic population. Since then, the Bureau of the Census developed independent population controls for the Hispanic population by sex and detailed age groups. Revised weighting procedures incorporate these new controls. The independent population estimates include some, but not all, undocumented immigrants.

ACCURACY OF THE ESTIMATES

Since the CPS estimates come from a sample, they may differ from figures from a complete census using the same questionnaires, instructions, and enumerators. A sample survey estimate has two possible types of error: nonsampling and sampling. The accuracy of an estimate depends on both types of error, but the full extent of the nonsampling error is unknown. Consequently, one should be particularly careful when interpreting results based on a relatively small number of cases or on small differences between estimates. The standard errors for CPS estimates primarily indicate the magnitude of sampling error. They also partially measure the effect of some nonsampling errors in responses and enumeration but do not measure systematic biases in the data. (Bias is the average over all possible samples of the differences between the sample estimates and the desired value.)

Nonsampling Variability. Nonsampling errors can be attributed to several sources including the following:

- Inability to obtain information about all cases in the sample.
- Definitional difficulties.
- Differences in the interpretation of questions.
- Respondents’ inability or unwillingness to provide correct information.
- Respondents’ inability to recall informatiion.
- Errors made in data collection such as in recording or coding the data.
- Errors made in processing the data.
- Errors made in estimating values for missing data.
- Failure to represent all units with the sample (undercoverage).

CPS undercoverage results from missed housing units and missed persons within sample households. Compared to the level of the 1980 Decennial Census, overall CPS undercoverage is about 7 percent. CPS undercoverage varies with age, sex, and race. Generally, undercoverage is larger for males than for females and larger for Blacks and other races combined than for Whites. As described previously, ratio estimation to independent age-sex-race-Hispanic population controls partially corrects for the bias due to undercoverage. However, biases exist in the estimates to the extent that missed persons in missed households or missed persons in interviewed households have different characteristics from those of interviewed persons in the same age-sex-race-Hispanic group. Furthermore, the independent population controls have not been adjusted for undercoverage in the 1980 census.

A common measure of survey coverage is the coverage ratio, the estimated population before ratio adjustment divided by the independent population control. Table C-2 shows CPS coverage ratios for age-sex-race groups for a recent month. The CPS coverage ratios can exhibit some variability from month to month, but these are a typical set of coverage ratios.

For additional information on nonsampling error including the possible impact on CPS data when known, refer to Statistical Policy Working Paper 3, *An Error Profile: Employment as Measured by the Current Population Survey*, Office of Federal Statistical Policy and Standards, U.S. Department of Commerce, 1978 and Technical Paper 40, *The Current Population Survey: Design and Methodology*, Bureau of the Census, U.S. Department of Commerce.

Comparability of Data. Data obtained from the CPS and other sources are not entirely comparable. This results from differences in interviewer training and experience and in differing survey processes. This is an example of nonsampling variability not reflected in the standard errors. Use caution when comparing results from different sources.

Caution should also be used when comparing estimates in this report, which reflect 1980 census-based population controls, with estimates for 1979 and earlier years, which reflect 1970 census-based population controls. This change in population controls had relatively little impact on summary measures such as means, medians, and percentage distributions, but did have a significant impact on levels. For example, use of 1980-based population controls results in about a 2-percent increase in the civilian noninstitutional population and in

Table C-2. **CPS Coverage Ratios**

Age	Non-Black		Black		All Persons		
	Male	Female	Male	Female	Male	Female	Total
0 to 14 years	0.929	0.964	0.850	0.838	0.916	0.943	0.929
15 years	0.933	0.895	0.763	0.824	0.905	0.883	0.895
16 to 19 years	0.881	0.891	0.711	0.802	0.855	0.877	0.866
20 to 29 years	0.847	0.897	0.660	0.811	0.823	0.884	0.854
30 to 39 years	0.904	0.931	0.680	0.845	0.877	0.920	0.899
40 to 49 years	0.928	0.966	0.816	0.911	0.917	0.959	0.938
50 to 59 years	0.953	0.974	0.896	0.927	0.948	0.969	0.959
60 to 64 years	0.961	0.941	0.954	0.953	0.960	0.942	0.950
65 to 69 years	0.919	0.972	0.982	0.984	0.924	0.973	0.951
70 years and older	0.993	1.004	0.996	0.979	0.993	1.002	0.998
15 years and older	0.914	0.945	0.767	0.874	0.898	0.927	0.918
0 years and older	0.918	0.949	0.793	0.864	0.902	0.931	0.921

NOTE: These coverage ratios are for May 1993.

the number of families and households. Thus, estimates of levels for data collected in 1980 and later years will differ from those for earlier years by more than what could be attributed to actual changes in the population. These differences could be disproportionately greater for certain subpopulation groups than for the total population.

Since no independent population control totals for persons of Hispanic origin were used before 1984, compare Hispanic estimates over time cautiously.

Note When Using Small Estimates. Summary measures (such as medians and percentage distributions) are shown only when the base is 75,000 or greater. Because of the large standard errors involved, summary measures would probably not reveal useful information when computed on a smaller base. However, estimated numbers are shown even though the relative standard errors of these numbers are larger than those for corresponding percentages. These smaller estimates permit combinations of the categories to suit data users' needs. Take care in the interpretation of small differences. For instance, even a small amount of nonsampling error can cause a borderline difference to appear significant or not, thus distorting a seemingly valid hypothesis test.

Sampling Variability. Sampling variability is variation that occurred by chance because a sample was surveyed rather than the entire population. Standard errors, as calculated by methods described later in "Standard Errors and Their Use," are primarily measures of sampling variability, although they may include some nonsampling error.

Standard Errors and Their Use. A number of approximations are required to derive, at a moderate cost, standard errors applicable to all the estimates in this report. Instead of providing an individual standard error for each estimate, generalized sets of standard errors

Table C-3. **Standard Errors of Estimated Numbers**

(Numbers in Thousands)

Size of Estimate	Persons	Families, Households, Householders, and Unrelated Individuals

100,000	495	285
125,000	447	259
150,000	336	198

Note: See Table C-5 for the appropriate factor to apply to the above standard errors.

are provided for various types of characteristics. Thus, the tables show levels of magnitude of standard errors rather than the precise standard errors.

Tables C-3 and C-4 provide standard errors of estimated numbers and estimated percentages, respectively. Table C-5 has standard error parameters for persons, families, households, householders and unrelated individuals. Tables C-6 and C-7 provide factors to apply to the standard error parameters for estimates prior to 1994.

The sample estimate and its standard error enable one to construct a confidence interval, a range that would include the average result of all possible samples with a known probability. For example, if all possible samples were surveyed under essentially the same

Table C-4. **Standard Errors of Estimated Percentages**

Base of percentage (thousands)	Estimated Percentages for Persons					
	1 or 99	2 or 98	5 or 95	10 or 90	25 or 75	50

125,000	0.04	0.05	0.09	0.12	0.2	0.2
150,000	0.04	0.05	0.08	0.11	0.15	0.2

Note: See Table C-5 for the appropriate factor to apply to the above standard errors.

general conditions and using the same sample design, and if an estimate and its standard error were calculated from each sample, then approximately 90 percent of the intervals from 1.645 standard errors below the estimate to 1.645 standard errors above the estimate would include the average result of all possible samples.

A particular confidence interval may or may not contain the average estimate derived from all possible samples. However, one can say with specified confidence that the interval includes the average estimate calculated from all possible samples.

Some statements in the report may contain estimates followed by a number in parentheses. This number can be added to and subtracted from the estimate to calculate upper and lower bounds of the 90-percent confidence interval. For example, if a statement contains the phrase "grew by 1.7 percent (±1.0)," the 90-percent confidence interval for the estimate, 1.7 percent, is 0.7 percent to 2.7 percent.

Standard errors may also be used to perform hypothesis testing, a procedure for distinguishing between population parameters using sample estimates. The most common type of hypothesis appearing in this report is that the population parameters are different. An example of this would be comparing the total number of family households in March 1990 to the total number of family households in March 1994.

Tests may be performed at various levels of significance, where a significance level is the probability of concluding that the characteristics are different when, in fact, they are the same. All statements of comparison in the text have passed a hypothesis test at the 0.10 level of significance or better. This means that the absolute value of the estimated difference between characteristics is greater than or equal to 1.645 times the standard error of the difference.

Standard Errors of Estimated Numbers. There are two ways to compute the approximate standard error,

s_x, of an estimated number shown in this report. The first uses the formula

$$s_x = fs \qquad (1)$$

where f is a factor from Table C-5, and s is the standard error of the estimate obtained by interpolation from Table C-3. The second method uses formula (2), from which the standard errors in Table C-3 were calculated. This formula will provide more accurate results than formula (1).

$$s_x = \sqrt{ax^2 + bx} \qquad (2)$$

Here x is the size of the estimate and a and b are the parameters in Table C-5 associated with the particular type of characteristic. When calculating standard errors for numbers from cross-tabulations involving different characteristics, use the factor or set of parameters for the characteristic which will give the largest standard error.

Illustration

Suppose that there were 96,391,000 households in 1994. Use the appropriate parameters from Table C-5 and formula (2) to get

Estimate, x	96,391,000
a parameter	-0.000011
b parameter	1,912
Standard error	287,000
90% confidence interval	95,919,000 to 96,863,000

The standard error is calculated as

$$s_x = \sqrt{(-0.000011)\,(96{,}391{,}000)^2 + (1{,}912)\,(96{,}391{,}000)} = 287{,}000$$

The 90-percent confidence interval for the estimated number of households in 1994 is calculated as 96,391,000 $\pm$ 1.645x287,000.

The alternate calculation of the standard error, using formula (1) with f = 1.0 from Table C-5 and s = 283,000 by interpolation from Table C-3, is

$$s_x = 1.0 \times 283{,}000 = 283{,}000$$

Table C-5. **Parameters and Factors for Persons, Families, Households, Householders, and Unrelated Individuals: March 1994**

Characteristics	a	b	f
NONINCOME CHARACTERISTICS			
Persons			
Total or White			
Some Household Members	-0.000024	4,818	0.9
All Household Members	-0.000029	5,854	1.0
Black			
Some Household Members	-0.000297	6,921	1.1
All Household Members	-0.000438	10,206	1.3
Asian or Pacific Islanders and Other Races			
Some Household Members	-0.000824	6,921	1.1
All Household Members	-0.001215	10,206	1.3
Hispanic Origin			
Some Household Members	-0.000378	6,921	1.1
All Household Members	-0.000558	10,206	1.4
Families, Households, Householders, and Unrelated Individuals			
Total or White	-0.000011	1,912	1.0
Black	-0.000071	1,730	1.0
Asian or Pacific Islanders and Other Races	-0.000182	1,730	1.0
Hispanic	-0.000143	1,730	1.0
INCOME CHARACTERISTICS			
Families, Households, Householders, and Unrelated Individuals			
Total or White	-0.000012	2,072	1.0
Black	-0.000110	2,262	1.1
Asian or Pacific Islanders and Other Races	-0.000325	2,262	1.1
Hispanic	-0.000176	2,262	1.1
BELOW POVERTY LEVEL			
Families, Households, Householders, and Unrelated Individuals			
Total or White	+0.000094	2,258	1.1
Black	+0.000094	2,258	1.1
Asian or Pacific Islanders and Other Races	+0.000094	2,258	1.1
Hispanic	+0.000094	2,258	1.1

Notes: To obtain parameters prior to 1993, multiply by the appropriate factors in Tables C-6 and C-7. For regional estimates multiply the a and b parameters by 0.74, 0.98, 1.04, and 1.06 for Northeast, Midwest, South, and West, respectively. The a and b parameters should be multiplied by 1.5 for nonmetropolitan residence categories and 1.9 for farm categories.

Standard Errors of Estimated Percentages. The reliability of an estimated percentage, computed using sample data for both numerator and denominator, depends on the size of the percentage and its base. Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more. When the numerator and denominator of the percentage are in different categories, use the factor or parameter from Table C-5 indicated by the numerator.

The approximate standard error, $s_{x,p}$, of an estimated percentage can be obtained by use of the formula

$$s_{x,p} = fs \qquad (3)$$

In this formula, f is the appropriate factor from Table C-5 and s is the standard error of the estimate obtained by interpolation from Table C-4.

Alternatively, formula (4) will provide more accurate results:

$$s_{x,p} = \sqrt{\frac{b}{x}\, p(100 - p)} \qquad (4)$$

Here x is the total number of persons, families, households, or unrelated individuals which is the base of the percentage, p is the percentage ($0 \le p \le 100$), and b is the parameter in Table C-5 associated with the characteristic in the numerator of the percentage.

Illustration

Suppose that 53,171,000 or 55.2 percent of the 96,391,000 households were married-couple families. Use the appropriate parameters from Table C-5 and formula (4) to get

Estimate, p	55.2
Base, x	96,391,000
b parameter	1,912
Standard error	0.2
90% confidence interval	54.9 to 55.5

The standard error is calculated as

$$S_{x,p} = \sqrt{\frac{1{,}912}{96{,}391{,}000}\,(55.2)\,(100.0 - 55.2)} = 0.2$$

The 90-percent confidence interval for the estimated percentage of households that were married-couple families is calculated as $55.2 \pm 1.645 \text{x} 0.2$.

The alternate calculation of the standard error, using formula (3) with f = 1.0 from Table C-5 and s = 0.2 by interpolation from Table C-4 is

$$S_{x,p} = 1.0 \text{ x } 0.2 = 0.2$$

Standard Error of a Difference. The standard error of the difference between two sample estimates is approximately equal to

$$s_{x-y} = \sqrt{s_x^2 + s_y^2} \qquad (5)$$

where s_x and s_y are the standard errors of the estimates, x and y. The estimates can be numbers, percentages, ratios, etc. This will represent the actual standard error quite accurately for the difference between estimates of the same characteristic in two different areas, or for the difference between separate and uncorrelated characteristics in the same area. However, if there is a high positive (negative) correlation between the two characteristics, the formula will overestimate (underestimate) the true standard error.

Illustration

Suppose that 70.7 percent of the 96,391,000 households in 1994 were family households, whereas, 73.7 percent of the 80,776,000 households in 1980 were family households. The apparent difference between the percentage of family households in 1994 and 1980 was 3.0 percent. Using Table C-5 and formula (4) the approximate standard errors, s_x and s_y, are 0.2 and 0.2 respectively. Use formula (5) to get

	x	y	difference
Estimate	70.7	73.7	3.0
Standard error	0.2	0.2	0.3
90% confidence interval	70.4 to 71.0	73.4 to 74.0	2.5 to 3.5

The approximate standard error of the difference is calculated as

$$s_{x-y} = \sqrt{0.2^2 + 0.2^2} = 0.3$$

The 90-percent confidence interval for the estimated difference between the percentage of households which were family households in 1994 and 1980 is calculated as $3.0 \pm 1.645 \text{x} 0.3$. Because this interval does not contain zero, we can conclude with 90-percent confidence that the percentage of households which are family households has decreased between 1980 and 1994.

Standard Error of a Median. The sampling variability of an estimated median depends on the form of the distribution and the size of the base. One can approximate the reliability of an estimated median by determining a confidence interval about it. (See the section "*Standard Errors and Their Use*" for a general discussion of confidence intervals.)

Estimate the 68-percent confidence limits of a median based on sample data using the following procedure.

1. Determine, using formula (4), the standard error of the estimate of 50 percent from the distribution.

2. Add to and subtract from 50 percent the standard error determined in step 1.

3. Using the distribution of the characteristic, determine upper and lower limits of the 68-percent confidence interval by calculating values corresponding to the two points established in step 2.
   Use the following formula to calculate the upper and lower limits.

$$X_{pN} = \frac{pN - N_1}{N_2 - N_1}(A_2 - A_1) + A_1 \qquad (6)$$

where X_{pN}= estimated upper and lower bounds for the confidence interval ($0 \le p \le 1$). For purposes of calculating the confidence interval, p takes on the values determined in step 2. Note that X_{pN} estimates the median when p = 0.50.

N = *for distribution of numbers*: the total number of units (persons, households, etc.) for the characteristic in the distribution.
= *for distribution of percentages*: the value 1.0.

p = the values obtained in step 2.

A_1, A_2 = the lower and upper bounds, respectively, of the interval containing X_{pN}.

Table C-6. **Factors to Approximate Parameters Prior to 1994: Total, White, Black, and Asian or Pacific Islanders**

Time Period	Factor
1990-1993	1.00
1989	1.11
1982-1988	0.94
1977-1981	0.84
1976 or earlier	0.82

Note: Apply the appropriate factor to the parameters in Table C-5.

Table C-7. **Factors to Approximate Parameters Prior to 1994: Hispanic Origin**

Time Period	Families	Persons	
		Some	All
1990-1993	1.00	1.00	1.00
1989	1.30	1.30	1.30
1985-1988	0.94	0.94	0.94
1982-1984	1.06	0.83	1.13
1977-1981	0.95	0.74	1.01
1976 or earlier	0.92	0.72	0.98

Note: Apply the appropriate factor to the parameters in Table C-5.

N_1, N_2 = *for distribution of numbers:* the estimated number of units (persons, households, etc.) with values of the characteristic greater than or equal to A_1 and A_2, respectively.
= *for distribution of percentages*: the estimated percentage of units (persons, households, etc.) having values of the characteristic greater than or equal to A_1 and A_2, respectively.

4. Divide the difference between the two points determined in step 3 by two to obtain the standard error of the median.

Use of the above procedure could result in standard errors which differ from those given in the detailed tables. The reasons for this discrepancy are the use of a more detailed distribution than that given in the tables in determining the published standard errors, and the rounding of the numbers to thousands in the published tables.

Illustration

Suppose that the estimated median age of all householders was 45.9 in 1994. Suppose also that the size, or base, of the distribution from which this median was determined was 96,391,000 householders.

1. Using formula (4) with b = 1,912 from Table C-5, the standard error of 50 percent on a base of 96,391,000 is about 0.2 percent.

2. To obtain a 68-percent confidence interval on the estimated median, add to and subtract from 50 percent the standard error found in step 1. This yields percentage limits of 49.8 and 50.2.

3. Suppose that 49,909,000 householders were 45 years of age or older and 33,333,000 were 55 or older. Using formula (6), the lower limit for the confidence interval of the median is:

$$\frac{0.502 \times 96{,}391{,}000 - 49{,}909{,}000}{33{,}333{,}000 - 49{,}909{,}000}(55-45)+45=45.9$$

   Similarly, the upper limit can be computed as

$$\frac{0.498 \times 96{,}391{,}000 - 49{,}909{,}000}{33{,}333{,}000 - 49{,}909{,}000}(55-45)+45=46.2$$

   Thus, a 68-percent confidence interval for the median age of all householders is from 45.9 to 46.2.

4. Therefore, the standard error of the median is

$$s_{median} = \frac{46.2 - 45.9}{2} = 0.2$$

Standard Error of a Ratio. Certain estimates may be calculated as the ratio of two numbers. The standard error of a ratio, x/y, may be computed using

$$s_{x/y} = \frac{x}{y}\sqrt{\left[\frac{s_x}{x}\right]^2 + \left[\frac{s_y}{y}\right]^2 - 2r\frac{s_x s_y}{xy}} \qquad (7)$$

The standard error of the numerator, s_x, and that of the denominator, s_y, may be calculated using formula (2). Alternatively, use formula (1) and Table C-5. In formula (7), r represents the correlation between the numerator and the denominator of the estimate.

For one type of ratio, the denominator is a count of families or households and the numerator is a count of persons in those families or households with a certain characteristic. If there is at least one person with the characteristic in every family or household, use 0.7 as an estimate of r. An example of this type is the mean number of children per family with children.

For all other types of ratios, r is assumed to be zero. If r is actually positive (negative), then this procedure will provide an overestimate (underestimate) of the standard error of the ratio. Examples of this type are the mean number of children per family and the poverty rate for families.

NOTE: For estimates expressed as the ratio of x per 100y or x per 1,000y, multiply formula (7) by 100 or 1,000, respectively, to obtain the standard error.

Illustration

Table 16 shows the total population in nonfamily households, x, was 34,959,000 and the total number of nonfamily households, y, was 28,247,000 in 1993. The average number of persons per nonfamily household is 1.24. Use formula (2) to compute the standard error of x and y.

	x	y	ratio
Estimate	34,959,000	28,247,000	1.24
Standard error	404,000	212,000	0.01
90% confidence interval	34,294,420 to 35,623,580	27,898,260 to 28,595,740	1.22 to 1.26

Using formula (7), the standard error is calculated as

$$s_{x/y} = \frac{34{,}959{,}000}{28{,}247{,}000}\sqrt{\left[\frac{404{,}000}{34{,}959{,}000}\right]^2 + \left[\frac{212{,}000}{28{,}247{,}000}\right]^2 - 2x.7\ x\ \frac{404{,}000x212{,}000}{34{,}959{,}000x28{,}247{,}000}}$$

$$= 0.01$$

The 90-percent confidence interval for the average number of persons per nonfamily household is calculated as 1.24± 1.645x.0.01.

Appendix D.
Introduction of 1990 Census Population Controls

The procedure used in developing population estimates in the Current Population Survey (CPS) involves the weighting of sample results to independent estimates of the population by sex, age, race, and Hispanic/non-Hispanic categories. These independent estimates are developed by using civilian noninstitutional population counts from the decennial censuses and projecting them forward to current years using data on births, deaths, and net migration. Beginning with the January 1994 CPS, the independent estimates used as control totals for the CPS are based on civilian noninstitutional population benchmarks established by the 1990 decennial census. In addition, for the first time in the history of the CPS, estimates of the decennial census undercount were used in establishing the population benchmarks.[1]

To show the effect of introducing new population controls, two sets of data for March 1993 are shown in the text tables for selected characteristics of the population. The data for March 1993 are shown using both the new 1990 census-adjusted controls and previously used 1980 census controls. Even though the difference is quite small, caution should be used when comparing CPS data for March 1993 with figures for earlier years.

[1]For a detailed description of the method used to develop the 1990 census control totals for the CPS, see Department of Labor, Bureau of Labor Statistics, *Employment and Earnings*, Volume 41, No. 2, February 1994.

Appendix E.
Conversion to a Computer-Assisted Questionnaire

The March 1994 Current Population Survey (CPS) and its income supplement are the first to use computer-assisted survey information collection (CASIC) technology for its entire data collection process. CASIC was introduced for monthly labor force data collection in January 1994. Prior to March 1994, a subsample of households was interviewed from centralized telephoning facilities. These cases amounted to about 8 percent of the total CPS caseload in 1993. The results of these cases were merged with the information collected using customary paper and pencil interviewing (PAPI).

Beginning in July 1992, and lasting for 18 months, a sample of approximately 14,000 households was selected and interviewed using a totally computer-assisted labor force data collection environment. These cases were selected as an independent, nationally representative sample and became known as the CATI/CAPI Overlap (CCO) sample. The purpose of the CCO was: 1) to measure the official labor force concepts more precisely, 2) to expand the amount of data available, 3) to implement several definitional changes, and 4) to adopt a computer-assisted interviewing environment. In March 1993, the demographic and income supplements were administered to the CCO sample and the results were compared to estimates from the March 1993 CPS. These comparisons were inconclusive in that they did not indicate any systematic differences between computer-assisted and paper and pencil interviewing. This was not surprising, since the CCO supplement used basically the same set of questions as the March 1993 CPS and had previously been used in a computer-assisted environment in the centralized telephone facilities. Factors which complicated the comparison of the data from the CPS and the CCO included the experience level of the CCO interviewers and field representative (FRs) and the size of the CCO sample. CCO interviewers and FRs were less experienced on the March demographic and income supplements than CPS FRs. The March 1993 CCO was the first experience many of these FRs had collecting demographic and income supplemental data using CASIC. The combination of inexperienced FRs, complex questions, and a new technology could have had an effect on the quality of the March 1993 CCO demographic and income supplements data. In addition, the size of the CCO sample (less than one-fourth the size of the CPS) was small enough that only very large differences between CPS and CCO estimates would have been statistically detectable.

Other differences in data collection procedures included:

- The March 1994 supplement employed a somewhat different demographic edit than the March 1993 supplement. The March 1994 edit resolved inconsistencies between the reported relationships of household members. In addition, family relationship was assigned to persons living in group quarters. In the March 1993 CPS, persons in group quarters were automatically designated as unrelated individuals. Since the demographic edit is the basis for the formation of family records, comparisons of family-based measures between the March 1993 and March 1994 CPS may be affected by these differences.
- The March 1994 computerized instrument restricted the number of respondents in a household to 16 for the demographic questions and 8 for the income supplement questions. The March 1993 PAPI allowed for the possibility of up to 39 respondents per household. Data from the March 1993 CPS show that only 0.01 percent of all housing units contained 9 or more respondents 15 years old and over. The aggregate income of these housing units represented 0.002 percent ($74 million) of the total aggregate income ($3.8 trillion). In the March 1994 CPS, the only circumstances under which income would go unreported was if more than eight persons received income from the same source (Social Security, pension income, etc.).
- It was discovered that when interviewing married-couple households, some CPS FRs using PAPI consistently reported the male as the householder (the person reported first in the household) and the wife as the second person in the household, regardless of the order given by the respondents. Use of a computer in collecting household roster information made it much more difficult to enter information in an order other than that provided by the respondent. Consequently, a larger proportion of married-couple households in the March 1994 CPS were categorized as having a female householder. The effect of the listing difference will be noticeable in comparing data tabulated by characteristics of the householder.
- In an effort to adapt to continually rising levels of annual income, the March 1994 income supplement was revised to allow for the coding of larger income amounts on selected questionnaire items. The most

notable change occurred in the upper limits of the questions which cover the amount of earnings received from an employer or own business for which the respondent worked the previous calendar year. These upper limits were modified to permit coding of earnings amounts to a maximum of $999,999. Between March 1986 and March 1993, procedures allowed for coding of amounts to a maximum of $299,999, and prior to March 1986, procedures allowed for coding of amounts to a maximum of $99,999. In addition to the increased upper limits for earnings, upper limits for other income items were also changed (see table D-4).

Review of the initial processing of the March 1994 CPS income data began in June 1994. During the review process, it was noted that certain estimates seemed inconsistent with previous years' estimates. Most noticeably, a higher concentration of Social Security recipients was appearing in the lower end of the income distribution. A review of individual Social Security income recipient records seemed to indicate that in some cases monthly amounts, instead of annual amounts, were being recorded. This led to a further review of other income sources. It was discovered that what appeared to be an inordinate number of subannual income amounts were being recorded for other income sources as well. In particular, wages seemed most suspect. To quantify our suspicions, tolerances were developed for each income source (see table D-1) and a special tabulation was run to count the number of cases that appeared out-of-range for March 1994 and March 1993. Table D-2 shows a summary of the results. To correct for the apparent recording errors being made in March 1994, a list of cases with unusually low amounts was developed and a reinterview of these cases was conducted in August 1994. In total, 5,422 cases were targeted for reinterview. Of these, 3,634 reinterviews (67.0 percent) were completed. Table D-3 shows the results of the reinterview process. We then revised the edit process. A proportion of cases targeted, but not reinterviewed, had their amounts adjusted based on likelihood functions derived from completed re-interviewed cases.

The suspected cause for the problems encountered in March 1994 was the lack of familiarity on the part of FRs with the new CASIC instrument. While provisions were made within the computer instrument to derive annual amounts from reported subannual amounts, apparently this process was not being used properly by some FRs.

To try and eliminate the problem of recording subannual amounts in future March income supplements, the data collection process will undergo modification. First, additional queries will be added to the survey instrument requiring FRs to enter a reporting period for the amount, that is, annual, monthly, bi-weekly, weekly, other. Second, lower and upper income tolerances have been established for income sources. Annual amounts reported outside these tolerances will activate a series of screens indicating to the FR that the amount recorded is suspect and requires verification. The verification should help eliminate any keystroke errors on the part of the FR. Third, FRs that were identified as having an inordinate number of problem cases in 1994 will be contacted to try and isolate the specific nature of their problems. Fourth, the problems encountered in March 1994 will be highlighted in future March training sessions and the correct procedures for entering subannual amounts will be emphasized.

The change in the questionnaire causes a break in the time series for some income measures. Table D-5 shows the effect of the questionnaire revision on selected income measures. Overall, the revision added about $52.7 billion to the total aggregate income that would have gone undetected had the old upper limits been used. Mean income, per capita income, shares of aggregate income by quintile, and the index of income concentration (Gini index) were all affected by the revisions, and caution should be used when comparing the 1993 data to earlier years. The effect of the revised upper limits on medians was negligible.

In conclusion, the conversion to a completely computer-assisted data collection environment represents a major break in the March CPS data series. As a result, data from the March 1994 CPS are not strictly comparable to earlier years. Additional information on the revisions to the Current Population Survey can be found in Department of Labor, Bureau of Labor Statistics, *Employment and Earnings*, Volume 41, No. 2, February 1994.

Table E-1. Minimum Dollar Value Tolerances in the March 1994 and March 1993 Current Population Surveys, by Income Source

Income source	Minimum dollar value tolerances
Wages and Salary[1]	$4.00 per hour/$2.00 per hour
Social Security	$1,000
Retirement Income	$500
Survivor Income	$500
Disability Income	$500
Supplemental Security Income	$500
Child Support	$200
Alimony	$200
Public Assistance	$50 per month
Veterans' Benefits[2]	$800/$100

[1]The hourly earnings tolerance was set at $4.00 per hour for workers reported working 40 or more weeks and 20 or more hours per week, and $2.00 per hour for everyone else, including those in occupations exempt from minimum wage requirements.
[2]The tolerance for Veterans' benefits received in the form of disability payments was $800 and $100 otherwise.

Note: Amounts less than $12 reported in nonearned income sources were blanked and allocated.

Table E-2. Out-of-Tolerance Income Cases in the March 1994 and March 1993 Current Population Surveys, by Income Source

Income source	March 1994 CPS	March 1993 CPS
Wages and Salary	4,040	2,115
Social Security	936	480
Retirement Income	328	274
Survivor Income	147	86
Disability Income	81	39
Supplemental Security Income	266	267
Child Support	124	99
Alimony	4	2
Public Assistance	202	106
Veterans' Benefits	(NA)	49

NA Not available.

Table E-3. Reinterview Summary for the March 1994 Current Population Survey

Cases assigned	Total	Wages	Social Security	Other
Cases Assigned	5,422	3,690	886	846
Interviewed	3,634	2,439	647	548
Changed dollar amount	1,393	572	544	277
No change	2,241	1,867	103	271
Noninterviewed	1,788	(X)	(X)	(X)
Reason (percent):				
Language	4.9	(X)	(X)	(X)
Refusal	10.0	(X)	(X)	(X)
No phone number	24.8	(X)	(X)	(X)
Moved	35.7	(X)	(X)	(X)
No Answer	23.7	(X)	(X)	(X)
Don't know	1.0	(X)	(X)	(X)

X Not applicable.

Table E-4. Upper Limit Changes for Selected Income Items

Income Item	New	Old
Earnings of longest job:		
Earnings from employer	$999,999	$299,999
Self-employment earnings	999,999	299,999
Earnings from:		
All other employers	999,999	99,999
Other own businesses	999,999	99,999
Farm	999,999	99,999
Social Security	49,999	29,999
Supplemental Security Income	24,999	9,999
Public assistance	24,999	19,999
Veteran's Benefits	99,999	29,999
Education assistance	[1]99,998	99,999
Child support	49,999	99,999
Alimony	49,999	99,999

[1]The upper limit of $99,998 reflects a combination of the upper limits of Pell Grants and other educational assistance, both with upper limits of $49,999.

Table E-5. Comparison of 1993 Income and Poverty Measures for Households, Families, and Persons, by New and Old Upper Limits, Race, and Hispanic Origin

Income measure	Based on:								Percent change due to change in upper limits			
	New upper limits				Old upper limits							
	Total	White	Black	Hispanic origin[1]	Total	White	Black	Hispanic origin[1]	Total	White	Black	Hispanic origin[1]

ARMED FORCES CODES FOR 21b
Enter code in descending order of priority. Thus if person served in Vietnam and in Korea, enter 1.
Vietnam Era (Aug.,'64–April'75) 1
Korean War (June'50–Jan.'55) 2
World War II (Sept.'40–July'47) 3
World War I (Apr.'17–Nov.'18) 4
Other Service (All other periods) 5

7a ADDRESS (Sheet ___, line ___)
PLACE | ST | ZIP CODE

7b What is your exact address? *(Make corrections to address above.)* ☐ Same

7c Is this your mailing address? ☐ Yes ☐ No – *Specify below include ZIP Code*

7d Special Place name | Type code | Sample No.

AREA SEGMENTS ONLY

8 YEAR BUILT
☐ *Ask 1st mo.* ☐ *Do NOT ask*
When was this structure originally built?
☐ Before 4-1-80 – *Continue interview*
☐ After 4-1-80 – *Complete 9c and 10–12, when required; end interview*

10 TENURE / LAND USE

Are your living quarters–	1st	5th
Owned or being bought by you or someone in your household?	1 ☐	1 ☐
Rented for cash?	2 ☐	2 ☐
Occupied without payment of cash rent?	3 ☐	3 ☐

11a ☐ URBAN – *SKIP to item 12*
☐ RURAL
- Regular units and Special Place units coded 85–88 in item 7d – *ASK item 11b*
- Special Place units not coded 85–88 in item 7d – *Mark "No" in item 11b without asking, then go to item 12*

NOTE: *Transcribe to CPS-1, item 5a.*

11b During the past 12 months did sales of crops, livestock, and other farm products from this place amount to $1,000 or more?

1st	5th
1 ☐ Yes	1 ☐ Yes
2 ☐ No	2 ☐ No

NOTE: *Transcribe to CPS-1, item 5b.*

COVERAGE QUESTIONS

9 *ASK (in 1st and 5th month):*

	1st	5th
1 ☐ a. Are there any occupied or vacant living quarters besides your own in this building?	Y ☐ N ☐ *Fill Table X*	Y ☐ N ☐ *Fill Table X*
2 ☐ b. Are there any occupied or vacant living quarters besides your own on this floor?	Y ☐ N ☐ *Fill Table X*	Y ☐ N ☐ *Fill Table X*
3 ☐ c. Is there any other building on this property for people to live in – either occupied or vacant?	Y ☐ N ☐ *Fill Table X*	Y ☐ N ☐ *Fill Table X*
4 ☐ d. None		

CHECK ITEM
12a *(Refer to item 7d)*
1 ☐ Unit is in a special place –*Refer to Table A in Part C of the manual and mark 12c or 12d accordingly.*
2 ☐ Unit is not in a special place

12b ACCESS
3 ☐ Direct – *Fill 12c*
4 ☐ Through another unit – Not a separate HU; combine with unit through which access is gained. *Apply "merged unit" procedures if appropriate.*

12c HOUSING UNIT
1 ☐ House, apartment, flat
2 ☐ HU in nontransient hotel, motel, etc.
3 ☐ HU permanent in transient hotel, motel, etc.
4 ☐ HU in rooming house
5 ☐ Mobile home or trailer with no permanent room added
6 ☐ Mobile home or trailer with one or more permanent rooms added
7 ☐ HU not specified above – *Describe* _____

12d OTHER UNIT
8 ☐ Quarters not HU in rooming or boarding house
9 ☐ Unit not permanent in transient hotel, motel, etc.
10 ☐ Unoccupied tent site or trailer site
11 ☐ Student quarters in college dormitory
12 ☐ OTHER unit not specified above – *Describe*

REFERENCE PERSON HOUSEHOLD ROSTER
Last name first
What are the names of all persons living or staying here? Start with the name of the person or one of the persons who (owns/rents) this home.
