# Poverty in States and Metropolitan Areas: 2022 

American Community Survey Briefs

By Craig Benson<br>ACSBR-016

December 2023

## INTRODUCTION

Planners, policymakers, and community stakeholders use poverty estimates as key indicators to evaluate trends and current economic conditions within communities and to make comparisons across demographic groups. Federal and state governments often use these estimates to allocate funds to local communities. Government agencies, researchers, and local organizations regularly use these estimates to identify the number of individuals and families eligible for various programs and to measure economic well-being.

This brief uses the 2021 and 2022 American Community Survey (ACS) 1-year estimates and the 2021 and 2022 Puerto Rico Community Surveys (PRCS) to analyze poverty rates for calendar year 2022, as well as the changes in poverty from calendar year 2021 for the nation, states, the District of Columbia, Puerto Rico, and metropolitan statistical areas (MSAs)., ${ }^{1,2}$

This brief also discusses the distribution of people by income-to-poverty ratios for the aforementioned

[^0]geographic areas, providing a picture of the depth of poverty and those near or just above their poverty threshold. ${ }^{3}$

## HIGHLIGHTS

- In 2022, the ACS national poverty rate was 12.6 percent, a decrease from 12.8 percent in 2021. ${ }^{4}$
- The poverty rate decreased in 9 states and the District of Columbia between 2 O 21 and 2022. No state had a poverty rate increase from 2021 to 2022. Poverty rates did not change in 41 states and Puerto Rico. Poverty rates in states and the District of Columbia ranged from 7.2 percent to 19.1 percent.
- In 5 of the 25 most populous metropolitan areas, the poverty rate decreased between 2021 and 2022. The Minneapolis MSA was the only metro area among the 25 most populous metropolitan areas that saw poverty increase, from 8.0 percent to 8.8 percent.
- In 2022, 6.1 percent of people nationally had income below 50 percent of their poverty threshold, which was not statistically different from the 2021 rate of 6.2 percent. The share of individuals living below 50 percent of poverty decreased in 10 states and the District of Columbia and increased in 4 states.

[^1]
## POVERTY

In 2022, 12.6 percent of the total U.S. population had income below their respective poverty thresholds, a significant decrease from the 2021 estimate of 12.8 percent. This follows what had been the first increase in year-to-year poverty rates since 2010 to $2011 .{ }^{5}$ Prior

[^2]to that, poverty rates had declined for 6 consecutive years (from 15.8 percent in 2013 to 12.3 percent in 2019) (Figure 1). ${ }^{6}$

New Hampshire had the lowest 2022 rate at 7.2 percent, while Mississippi and Louisiana had among the highest at 19.1 percent and 18.6 percent, respectively
${ }^{6}$ All year-to-year changes from 2005 to 2022 (except between 2005-2006, 2011-2012, and 2012-2013) were statistically significant.
(Appendix Table 1). ${ }^{7}$ Figure 2 displays the percentage of people in poverty for all states, the District of Columbia, and Puerto Rico. ${ }^{8}$ Colorado, Connecticut, Delaware, Maryland, Minnesota, New Hampshire, New Jersey, and

[^3]Figure 1.
American Community Survey Poverty Rates: 2005 to 2022 (In percent)

Note: Estimates for 2020 experimental data are unavailable. For more information, refer to
<www.census.gov/programs-surveys/acs/technical-documentation/user-notes/2021-02.html>.
Starting in 2006, the American Community Survey includes the group quarters population. The poverty universe excludes children under the age of 15 who are not related to the householder, people living in institutional group quarters (e.g., nursing homes or correctional facilities), and people living in college dormitories or military barracks. Recessions are determined by the National Bureau of Economic Research. For more information, refer to <www.nber.org/cycles.html>. For information on confidentiality protection, sampling error, nonsampling error, and definitions, refer to <www.census.gov/programs-surveys/acs/technical-documentation/code-lists.html>.
Source: U.S. Census Bureau, 2005 to 2019 and 2021 to 2022 American Community Survey, 1-year estimates.

Utah had poverty rates in the lowest poverty map category, less than 10.0 percent in $2022 .{ }^{9}$ Alabama, Arkansas, Kentucky, Louisiana, Mississippi, New Mexico, Oklahoma, West Virginia, and Puerto Rico had 2022 poverty rates of 15.0 percent or higher (Figure 2).

In 2022, no states had a significant increase in poverty, whereas nine

[^4]states and the District of Columbia showed decreases in poverty rates compared to 2021 (Figure 3). Forty-one states did not significantly change.

While the overall national 2022 poverty rate was 12.6 percent, there was variability among census regions. ${ }^{10}$ Eight out of the nine states in the Northeast had

[^5]poverty rates of 12.0 percent or less and three had poverty rates of 10.0 percent or less, whereas seven states in the South had poverty rates of 15.0 percent or more. States in the Midwest were consistently in the middle categories, with all but one state between 10.0 percent and 14.9 percent (Minnesota being the exception, with a rate of 9.6 percent). The West had two states in the lowest poverty category and one state in the highest (Figure 2).

## POVERTY IN METROPOLITAN AREAS

Figure 4 shows the percentage of people in poverty in 2021 and 2022 for the 25 most populous metropolitan areas. ${ }^{11}$ The Washington, DC (7.9 percent) and Denver (8.3 percent) MSAs had among the
" Appendix Table 2 shows the estimated number and percentage of people in poverty in 2021 and 2022 for the 25 most populous metro areas.
lowest poverty rates. ${ }^{12}$ Conversely, the Houston ( 14.3 percent), San Antonio (14.2 percent), and Detroit (13.8 percent) MSAs had among the highest poverty rates of the 25 most populous metropolitan areas in 2022. ${ }^{13}$

[^6]Poverty rates decreased in 5 of the 25 most populous metro areas compared to 2021. Poverty rates increased in 1 metro area, the Minneapolis MSA, from 8.0 percent in 2021 to 8.8 percent in 2022 . Of the top 25 most populous metro areas, nearly one-half (12) had poverty rates less than or equal to 10.0 percent. In comparison, 7 metro areas had a poverty rate less than or equal to 10.0 percent in 2021. Figure 4 provides 2022 and 2021 poverty rates for these most populous metropolitan areas.

Figure 3.
Change in Percentage of People in Poverty for the United States and Puerto Rico: 2021-2022

Figure 4.
Percentage of People in Poverty for the 25 Most-Populous Metro Areas: 2021 and 2022

[^7]The three most populous metro areas (New York, Los Angeles, and Chicago MSAs) had poverty rates in 2022 that were not statistically different from those in 2021. Figure 5 provides 2022 poverty rates for all MSAs with a population of 65,000 or greater. Geographically, MSAs with poverty rates of 20.0 percent or higher were concentrated in the South. ${ }^{14}$ Of the 28 metro areas that were in the highest poverty rate category, 15 were in the South. Alternatively, metropolitan areas with poverty rates below 10.0 percent were more evenly distributed throughout the nation. The West and Northeast had approximately one-quarter of their metro areas in this low poverty map category (Figure 5).

## DEPTH OF POVERTY

The poverty rate is an estimate of the proportion of people with family or personal income below their poverty threshold. An income-topoverty ratio evaluates how close a family's or individual's income is to their poverty threshold. It measures the depth of poverty for those with incomes below their poverty threshold.

In this brief, the income-to-poverty ratio is reported as both a percentage and ratio. For example, an income-to-poverty-ratio of 125 percent indicates families or individuals with income equal to 1.25 times their poverty threshold, while an income-to-poverty ratio of 50 percent identifies families or individuals with income equal to one-half of their poverty threshold. Families and individuals identified as in poverty and described in the preceding sections of this brief had an income-to-poverty ratio of less than 100 percent.

[^8]
## HOW POVERTY IS MEASURED

Poverty status is determined by comparing annual income to a set of dollar values (called poverty thresholds) that vary by family size, number of children, and the age of the householder. If a family's before-tax money income is less than the dollar value of their threshold, then that family and every individual in it are considered to be in poverty. For people not living in families, poverty status is determined by comparing individuals' income to their poverty threshold.

The poverty thresholds are updated annually to account for changes in the cost of living using the Consumer Price Index for all Urban Consumers (CPI-U). They do not vary geographically.

Poverty status is determined for individuals in housing units and noninstitutional group quarters. The poverty universe excludes children under the age of 15 who are not related to the householder, people living in institutional group quarters (e.g., nursing homes or correctional facilities), and people living in college dormitories or military barracks. Population figures used in this brief reflect this poverty universe.

The American Community Survey (ACS) is a continuous survey, and people respond throughout the year. Since income is reported for the previous 12 months, the appropriate poverty threshold for each family is determined by multiplying the base-year poverty threshold from 1982 by the average of monthly CPI- $\cup$ values for the 12 months preceding the survey month.

For more information, refer to page 110 of "American Community Survey and Puerto Rico Community Survey 2022 Subject Definitions" at <www.census.gov/programs-surveys/acs/technical-documentation/ code-lists.html>. For more information on ACS sample design and other topics, refer to <www.census.gov/acs>.

Table 1 for states and Table 2 for metro areas include several different income-to-poverty ratios. This brief provides analysis for two categories, below 50 percent of the poverty threshold and between 100 percent to below 125 percent of the poverty threshold.

Table 1 details the proportion of people with income below 50 percent of their poverty threshold in 2022 for the nation, states, the District of Columbia, and Puerto Rico (refer to Appendix Table 3 for 2021 estimates). The tables also show various other
income-to-poverty ratios. The share of the U.S. population with income below 50 percent of their poverty threshold was 6.1 percent in 2022 and showed no statistically significant change from 2021.

Overall, 10 states and the District of Columbia had a decrease in the proportion of people with an income-to-poverty ratio below 50 percent since 2021. Four states had an increase in the state's population living with incomes below one-half of their poverty threshold compared to 2021.

[^9]New Hampshire (3.5 percent) and Utah ( 3.9 percent) were the states with among the lowest proportions of people with an income-topoverty ratio below 50 percent in 2022. ${ }^{15}$ Mississippi (8.8 percent), Louisiana ( 8.5 percent), Arkansas (8.3 percent), West Virginia (8.2 percent), and the District of Columbia ( 8.0 percent) had among the highest proportions of people with income-to-poverty ratios
${ }^{15}$ In 2022, the percentages of people with an income-to-poverty ratio below 50 percent in New Hampshire ( 3.5 percent) and Utah ( 3.9 percent) were not statistically different.
below 50 percent. ${ }^{16}$ Despite having among the highest proportions of people with income-to-poverty ratios below 50 percent, Louisiana and the District of Columbia had decreasing rates compared to 2021. Puerto Rico's proportion of people in this income-to-poverty ratio was 20.6 percent, not statistically different from 2021.

[^10]In 2022, 15 states and the District of Columbia had at least one-half of their total in-poverty population with incomes less than 50 percent of the poverty threshold.

Table 2 displays the percentage of people with an income-to-poverty ratio below 50 percent for the 25 most populous metropolitan areas in 2022. In 2022 (refer to Appendix Table 4 for 2021 estimates), Minneapolis (4.1 percent), Washington, DC (4.2 percent), and Denver (4.3 percent) MSAs had among the lowest percentages of people with income-to-poverty

Table 2.
Percentage of People by Ratio of Income-to-Poverty Levels for the 25 Most Populous Metropolitan Areas: 2022 ${ }^{1}$

[^11]ratios below 50 percent. ${ }^{17}$ The Houston (6.8 percent), Detroit (6.7 percent), New York ( 6.4 percent), Los Angeles ( 6.3 percent), and San Antonio ( 6.2 percent) MSAs all were among the highest rates of individuals with income-to-poverty ratios below 50 percent. ${ }^{18}$

The share of people with income below 50 percent of their poverty threshold decreased in 4 of the 25 most populous metropolitan areas from 2021 to 2022, while none of the largest metropolitan areas saw increases in the same period.

## NEAR POVERTY

For those with incomes above their poverty threshold, an income-topoverty ratio measures how close a person is to being in poverty. Individuals with an income-topoverty ratio between 100 percent to below 125 percent of their poverty threshold are referred to as being "near poverty" in this brief.

Table 1 displays the percentage of people in near poverty in 2022 for the nation, states, the District of Columbia, and Puerto Rico (refer to Appendix Table 3 for 2021 estimates). In 2022, the percentage of people in the United States in near poverty was 3.7 percent, not statistically different from 2021.

Among the states, the percentage of individuals in near poverty in 2022 ranged from 2.4 percent to
${ }^{17}$ In 2022, the percentages of people with an income-to-poverty ratio below 50 percent in the Minneapolis (4.1 percent), Washington, DC (4.2 percent), and Denver (4.3 percent) MSAs were not statistically different.
${ }^{18}$ In 2022, the percentages of people with an income-to-poverty ratio below 50 percent in the Houston ( 6.8 percent), Detroit ( 6.7 percent), New York ( 6.4 percent), Los Angeles ( 6.3 percent), and San Antonio ( 6.2 percent) MSAs were not statistically different.
5.7 percent. ${ }^{19}$ States with among the highest percentages of individuals living in this near poverty category include Mississippi (5.7 percent), New Mexico (5.4 percent), Arkansas (5.4 percent), and West Virginia ( 5.3 percent). ${ }^{20}$ The percentage of individuals in near poverty in Puerto Rico was 9.0 percent in 2022 . From 2021 to 2022, the percentage of people in near poverty increased in three states (Connecticut, New Hampshire, and Pennsylvania) and decreased in three others (Alabama, Kentucky, and Tennessee).

Table 2 (and Appendix Table 4 for 2021 estimates) displays the percentage of people in near poverty for 2021 and 2022 among the 25 most populous metropolitan areas. The metro areas ranged from 2.3 percent to 4.4 percent. ${ }^{21,22}$

Looking at the corresponding near poverty rates for the 25 most

[^12]populous metropolitan areas in 2022, the percentage of people in near poverty increased from 2021 in the Washington, DC MSA and decreased in the Detroit MSA (Table 2 and Appendix Table 4). There was no significant change in near poverty in the rest of the 25 most populous metropolitan areas.

## SUMMARY

This brief used the 2021 and 2022 American Community Survey 1-year estimates and the 2021 and 2022 Puerto Rico Community Survey to analyze poverty rates for the calendar year 2022, as well as changes in poverty from calendar year 2021 for the nation, states, the District of Columbia, Puerto Rico, and metro areas.

The national poverty rate decreased in 2022 from 12.8 percent to 12.6 percent. This decline follows an increase from 2019 to 2021 that had reversed a trend of 6 straight years of declining poverty from 2014 to 2019. The poverty rate decreased in 9 states and the District of Columbia, reversing a state-level trend that saw 14 states and the District of Columbia increase in poverty between 2019 and 2021. There were also poverty rate decreases in 5 of the 25 most populous metropolitan areas.

The percentage of the U.S. population with income below 50 percent of their poverty threshold was 6.1 percent in 2022 and did not significantly change from 2021. Ten states and the District of Columbia had declining rates at this income-to-poverty ratio, while four states had increasing rates compared to 2021.

This brief also examined the proportion of people slightly above their poverty thresholds. In 2022, the percentage of people nationally with an income-topoverty ratio between 100 percent to below 125 percent was 3.7 percent, unchanged from the 2021 estimate. Several states in the South were among those states with the highest percentage of individuals in this income-topoverty category.

## SOURCE AND ACCURACY

The data presented in this brief are based on the ACS and PRCS sample interviewed from January 2021 through December 2021 (2021 ACS and PRCS) and the ACS and PRCS sample interviewed from January 2022 through December 2022 (2022 ACS and PRCS). The estimates based on these samples describe the average values of person, household, and housing unit characteristics over this period of collection. Sampling error is the uncertainty between an estimate based on a sample and the corresponding value that would be obtained if the estimate were based on the entire population (as from a census). Measures of sampling error are provided in the form of margins of error for all estimates included in this brief. All comparative statements in this brief have undergone statistical testing, and comparisons are significant at the 90 percent confidence level unless otherwise noted. In addition to

## WHAT IS THE AMERICAN COMMUNITY SURVEY?

The American Community Survey (ACS) is a nationwide survey designed to provide communities with reliable and timely demographic, social, economic, and housing data for the nation, states, congressional districts, counties, places, and other localities every year. It has an annual sample size of about 3.5 million addresses across the United States and Puerto Rico and includes both housing units and group quarters (e.g., nursing facilities and prisons). ${ }^{1}$ The ACS is conducted in every county throughout the nation and every municipio in Puerto Rico, where it is called the Puerto Rico Community Survey. Beginning in 2006, ACS 1-year data have been released annually for geographic areas with populations of 65,000 and greater. For information on the ACS sample design and other topics, visit <www.census.gov/acs>.

[^13]sampling error, nonsampling error may be introduced during any of the operations used to collect and process survey data such as editing, reviewing, or keying data from questionnaires. For more information on sampling and estimation methods, confidentiality protection, and sampling and nonsampling errors, refer to the 2022 ACS Accuracy of the Data document located at <www.census.gov/programs-surveys/acs/technical-documentation/code-lists.html>.

## NOTES

ACS data from 2010 forward are available on <https://data.census. gov>. Historical estimates of state poverty rates prior to 2010 can be found in Appendix Table 1 of
the brief "Poverty: 2016 and 2017," located at <www.census.gov/ library/publications/2018/acs/ acsbr17-02.html>.

The Census Bureau also publishes poverty estimates based on the Current Population Survey Annual Social and Economic Supplement (CPS ASEC), the Survey of Income and Program Participation (SIPP), and the Small Area Income and Poverty Estimates (SAIPE). For information on poverty estimates from the ACS and how they differ from those based on the CPS ASEC, SIPP, and SAIPE, refer to the information and survey comparisons at <www.census.gov/ topics/income-poverty/poverty/ guidance/data-sources.html>.

${ }^{1}$ Poverty status is determined for individuals in housing units and noninstitutional group quarters. The poverty universe excludes children under the age of 15 who are not related to the householder, people living in institutional group quarters (e.g., nursing homes or correctional facilities), and people living in college dormitories or military barracks. People and families are classified as being in poverty if their income is less than their poverty threshold. If their income is less than one-half of their poverty threshold, they are below . 50 of poverty; less than the threshold itself, they are in poverty (below 100 percent of poverty); less than 1.25 times the threshold, below 125 percent of poverty, and so on.
${ }^{2}$ Data are based on a sample and are subject to sampling variability. A margin of error is a measure of an estimate's variability. The larger the margin of error in relation to the size of the estimate, the less reliable the estimate. This number, when added to or subtracted from the estimate, forms the 90 percent confidence interval.

Note: For information on confidentiality protection, sampling error, nonsampling error, and definitions, refer to <www.census.gov/programs-surveys/acs/technical-documentation/code-lists.html>

[^0]:    ${ }^{1}$ Metropolitan statistical areas (MSAs or metro areas) are geographic entities delineated by the Office of Management and Budget (OMB) for use by federal statistical agencies in collecting, tabulating, and publishing federal statistics. A metro area contains a core urban area with a population of 50,000 or more individuals. For more information, refer to <www.census.gov/programs-surveys/ metro-micro/about/omb-standards.html>.
    ${ }^{2}$ The U.S. Census Bureau reviewed this data product for unauthorized disclosure of confidential information and has approved the disclosure avoidance practices applied to this release. CBDRB-FY23-0175. All comparative statements have undergone statistical testing and are statistically significant at the 90 percent confidence level, unless otherwise noted

[^1]:    ${ }^{3}$ The data collection period for the 2021 ACS spanned January to December 2021; the data collection period for the 2022 ACS spanned January to December 2022.
    ${ }^{4}$ Following the standard specified by OMB in Statistical Policy Directive 14, data from the Current Population Survey Annual Social Economic Supplement are used to estimate the official national poverty rate that can be found in the report "Poverty in the United States: 2022," available at <www.census.gov/library/ publications/2023/demo/p60-280.html>. The national poverty percentage does not include data for Puerto Rico.

[^2]:    ${ }^{5}$ The U.S. poverty rate increased from 2019 to 2021. Estimates for 2021 were compared to 2019, the last previous year with consistent weighting methodologies. For additional information on the 2020 experimental data, refer to <www.census.gov/programs-surveys/acs/ data/experimental-data.html>.

[^3]:    ${ }^{7}$ The 2022 poverty rates for Mississippi (19.1 percent) and Louisiana (18.6 percent) were not statistically different.
    ${ }^{8}$ The classification categories used in Figure 2 and Figure 5 have been determined by the natural breaks (Jenks) method of categorization. For more information on data classification methods, refer to <https://pro.arcgis.com/en/pro-app/latest/ help/mapping/layer-properties/data-classification-methods.htm>.

[^4]:    ${ }^{9}$ The 2022 poverty rates for Washington (10.0 percent), Hawaii (10.2 percent), Vermont (10.4 percent), and Rhode Island (10.8 percent) were not statistically different from 10.0 percent.

[^5]:    ${ }^{10}$ Census regions are groupings of states and the District of Columbia that subdivide the United States for the presentation of Census Bureau data. For more information, refer to <https://www2.census.gov/geo/pdfs/ maps-data/maps/reference/us_regdiv.pdf>.

[^6]:    ${ }^{12}$ The 2022 poverty rates for the Washington, DC (7.9 percent) and Denver ( 8.3 percent) MSAs were not statistically different.
    ${ }^{13}$ The 2022 poverty rates for the Houston ( 14.3 percent), San Antonio ( 14.2 percent), and Detroit (13.8 percent) MSAs were not statistically different.

[^7]:    * Change statistically different from zero at the 90 percent confidence level.

    Note: For information on confidentiality protection, sampling error, nonsampling error, and definitions, refer to <www.census.gov/programs-surveys/acs/guidance.html>.

[^12]:    ${ }^{19}$ In 2022, the percentages of people with an income-to-poverty ratio between 100 percent to below 125 percent was the lowest and not statistically different in New Hampshire (2.4 percent), New Jersey (2.6 percent), Massachusetts ( 2.7 percent), Minnesota ( 2.8 percent), Maryland ( 2.8 percent), Colorado (2.8 percent), Rhode Island ( 2.9 percent), North Dakota (2.9 percent), Vermont (3.0 percent), and the District of Columbia (3.0 percent).
    ${ }^{20}$ In 2022, the percentages of individuals with an income-to-poverty ratio between 100 percent to below 125 percent in Mississippi ( 5.7 percent), New Mexico ( 5.4 percent), Arkansas (5.4 percent), and West Virginia ( 5.3 percent) were not statistically different.
    ${ }^{21}$ In 2022, the Washington, DC (2.3 percent), Denver ( 2.3 percent), Minneapolis ( 2.3 percent), Boston ( 2.4 percent), Seattle (2.4 percent), and San Francisco (2.6 percent) MSAs all had among the lowest percentage of people in near poverty and were not statistically different.
    ${ }^{22}$ In 2022, the Miami (4.4 percent), Orlando ( 4.3 percent), Riverside ( 4.2 percent), San Antonio (4.1 percent), Houston (4.1 percent), and Los Angeles (4.1 percent) metro areas had among the highest percentages of people in near poverty among the most populous metropolitan statistical areas and were not statistically different.

[^13]:    ${ }^{1}$ While people living in group quarters are sampled in the ACS, those living in institutional group quarters (e.g., nursing homes or correctional facilities) are not included in the poverty universe.

[^14]:    * Statistically different from zero at the 90 percent confidence level.

    Z Represents or rounds to zero.
