

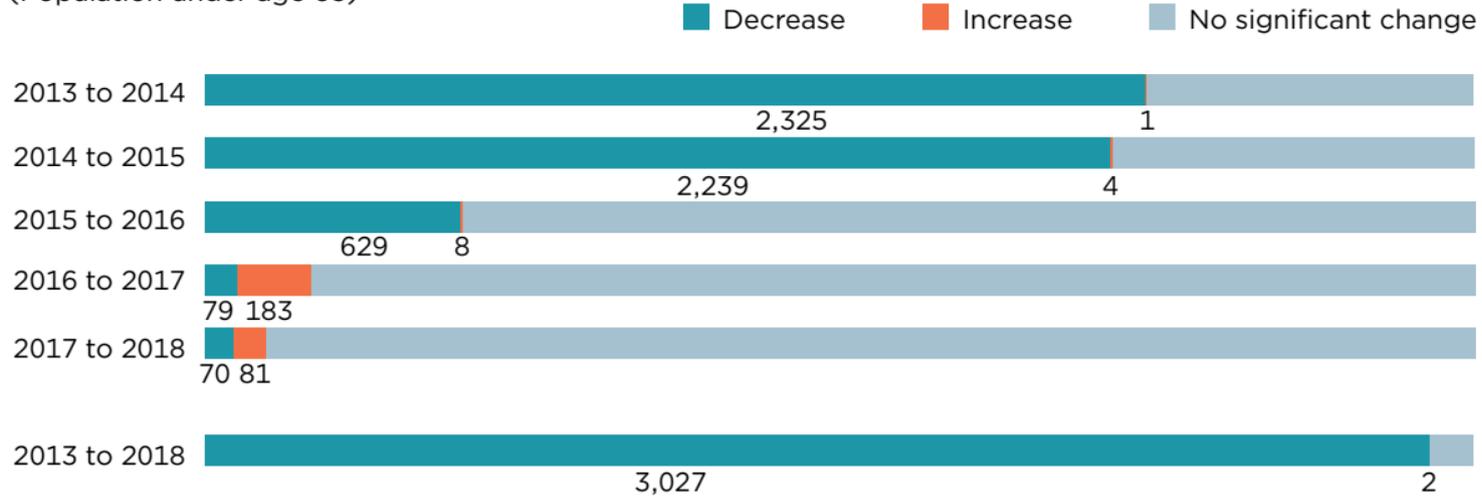

Figure 2.

Number of Counties With a Change in Their Estimated Uninsured Rates: 2013 to 2018

(Population under age 65)

Note: There are 3,142 counties in the United States. The SAHIE program does not include Kalawao County, Hawaii, due to insufficient data. When analyzing changes between 2013 and later years, four counties are not included. Bedford County, Virginia, and three counties in Alaska experienced changes in geographic boundaries in 2014. The data for these counties are not comparable to 2013.

The data provided are indirect estimates produced by statistical model-based methods using sample survey, decennial census, and administrative data sources. The estimates contain error stemming from model error, sampling error, and nonsampling error. Source: U.S. Census Bureau, 2018 Small Area Health Insurance Estimates (SAHIE) program.
