

Change in Childhood Disability Rates by Disability Type: 2008 and 2019

¹ Significantly higher than the 2008 estimate at the 90 percent confidence level.

² Significantly lower than the 2008 estimate at the 90 percent confidence interval. Statistical testing of differences between estimates is conducted with unrounded numbers.

Note: Since some children have more than one type of disability, the number (or percentage) of children with each type of disability may not sum to the total number (or percentage) of children with 'any disability.' Statistical testing of differences between estimates is conducted with unrounded numbers. Data based on sample. More information on confidentiality protection, sampling error, nonsampling error, and definitions is available at www.census.gov/programs-surveys/acs/technical-documentation/code-lists.html.
