

Figure 5.

Percentage of Working-Age Adults Without Health Insurance Coverage by Selected Characteristics: 2020 and 2021

(Population as of March of the following year, adults aged 19 to 64)

* Denotes a statistically significant change between 2020 and 2021 at the 90 percent confidence level.

¹Federal surveys give respondents the option of reporting more than one race. Therefore, two basic ways of defining a race group are possible. A group, such as Asian, may be defined as those who reported Asian and no other race (the race-alone or single-race concept) or as those who reported Asian regardless of whether they also reported another race (the race-alone-or-in-combination concept). This figure shows estimates for the race-alone population.

²The combined category "married" includes three individual categories: "married, civilian spouse present," "married, U.S. armed forces spouse present," and "married, spouse absent."

Note: Information on confidentiality protection, sampling error, nonsampling error, and definitions is available at <https://www2.census.gov/programs-surveys/cps/techdocs/cpsmar22.pdf>.
