

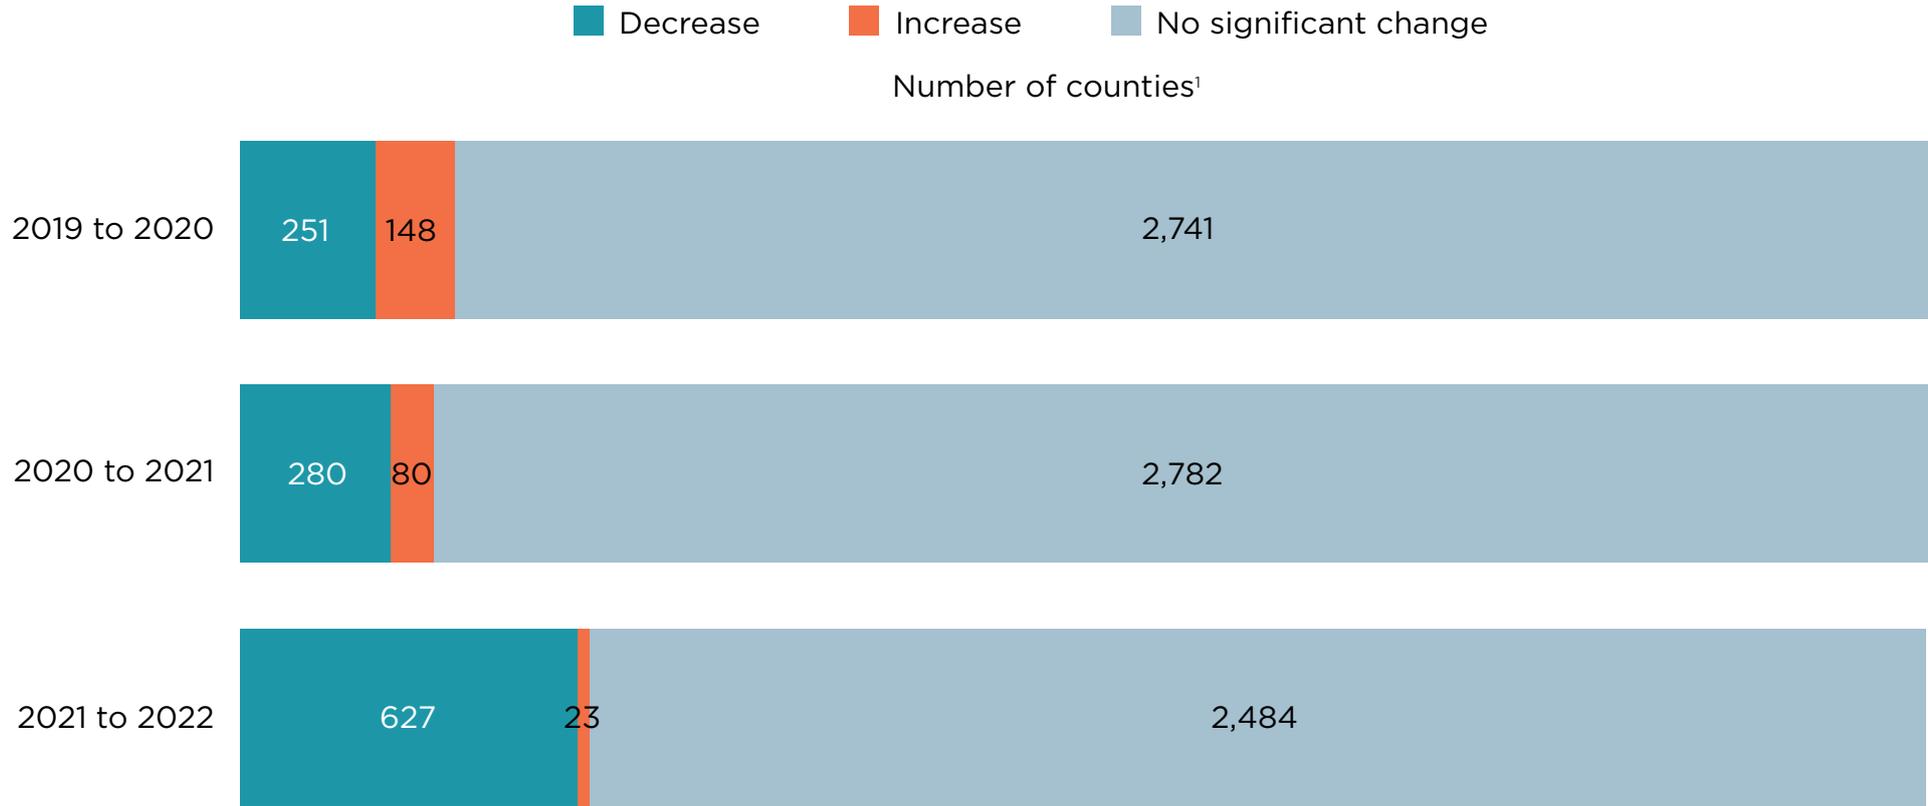

Figure 2.

### Number of Counties With a Change in Their Estimated Uninsured Rates: 2019 to 2022

(Population under the age of 65)

<sup>1</sup> There are 3,144 counties in the United States, but the SAHIE program does not include Kalawao County, HI, due to insufficient data. When analyzing changes between 2019 and later years, three counties are not included. Two new counties were created and one county was deleted in Alaska in 2020. The data for these counties are not comparable to 2019. When analyzing changes between 2022 and earlier years, nine additional counties are not included. In 2022, Connecticut's nine Councils of Governments were adopted as the county-equivalent geographic unit. The data for these counties are not comparable to 2019 and 2022, respectively.

Note: The data provided are indirect estimates produced by statistical model-based methods using sample survey, decennial census, and administrative data sources. The estimates contain error stemming from model error, sampling error, and nonsampling error.
