American Community Survey Response and Nonresponse Rates for American Indian and Alaska Native Geographic Areas

Michael D. Starsinic
Decennial Statistical Studies Division

I. Introduction and Background

Unit nonresponse is the failure to obtain the minimum required information from an eligible housing unit in the sample. Unit nonresponse occurs when respondents are unable or unwilling to participate, interviewers are unable to locate addresses or respondents, or when other barriers exist to completing the interview.

It is important to measure nonresponse because it can have a direct effect on the quality of the data. If the rate of unit nonresponse is high, it increases the chance that the final survey estimates may reflect bias. Estimates may reflect bias if the characteristics of nonresponding units differ from the characteristics of responding units.

Housing unit response rates, which measure the unit nonresponse, are one of several measures commonly used as indicators of a survey's quality. Response and nonresponse rates are complementary (nonresponse rate = 100 percent - response rate), and can be used interchangeably when discussing a survey's quality. The American Community Survey (ACS) generally focuses on response rates, but both rates are presented in this report.

II. Methodology

Weighted housing unit response and nonresponse rates for the ACS are calculated at the nation, state, and county levels annually for each 1-, 3-, and 5-year period, and are released on American FactFinder and the ACS website.¹ Response rates for the ACS are calculated using the formula below:

$$\text{Response Rate} = \frac{\text{Initially weighted estimate of interviews}}{\text{Initially weighted estimate of cases eligible to be interviewed}}$$

The “initial weights” include both the base weight (the inverse of the probability of selection) and the subsampling rate for those nonresponding cases that were subsampled for personal visit follow-up. A weighted rate is used because not all housing units have the same probability of selection. The ACS sample design includes differential sampling and subsampling rates.² Weighting accounts for the different probabilities of selection as a result of sampling and subsampling. Weighting also allows better comparability over time as sampling rates change.

In addition to the response and nonresponse rates, the ACS also calculates rates for seven detailed reasons for noninterviews: refusal, unable to locate, no one home, temporarily absent, language problem, insufficient data, and other.³

¹Housing unit response rates are available in detailed table B98021 on American FactFinder (http://factfinder2.census.gov/bkmk/table/1.0/en/ACS/12_1YR/B98021) and on the ACS website (http://www.census.gov/acs/www/methodology/response_rates_data/index.php). Response rates for persons in group quarters are also calculated for the ACS but are not discussed in this report.

² Refer to the Accuracy of the Data for more information about the use of differential sampling and subsampling in the ACS: http://www.census.gov/acs/www/Downloads/data_documentation/Accuracy/MultiyearACSAccuracyofData2012.pdf

³ For definitions of the detailed reasons for noninterviews, see http://www.census.gov/acs/www/methodology/response_rates_definitions/

Response rates can be calculated for a given geographic area, but not for a population group (e.g. males), because the characteristics of the noninterviewed housing units and persons in those housing units are unknown. Thus, response rates could be calculated for American Indian and Alaska Native (AIAN) geographic areas, but they could not be calculated for the AIAN population.

The 2008–2012 5-year ACS published estimates for 618 AIAN areas of various types in summary level 250 (not including Hawaiian home lands). This report provides the response, nonresponse and reason for noninterview rates in Appendix A for 516 areas with a minimum of 10 respondents plus nonrespondents. Of the remaining 102 areas, there are 54 areas where there are not sufficient cases to calculate a reasonable response rate. The other 48 areas had too few cases to publish their individual rates, although we can classify the areas as having “high” or “low” response rates in Appendix A. “High” indicates a response rate of 80 percent or higher, and “low” indicates a response rate less than 80 percent. While 80 percent would be considered a high response rate for many surveys, it is not high when compared to the ACS response rates of other geographic areas. The breakdown by geographic type⁴ for the 516 areas with 10 or more cases is in Table 1 below.

Table 1: Number of AIAN Areas By Type

AIAN Area Types	Total Number of Areas	Areas With 10+ Cases
Federal Reservation and Off-Reservation Trust Land (ORTL)	325	254
Oklahoma Tribal Statistical Area (OTSA)	29	29
Alaska Native Village Statistical Area (ANVSA)	220	197
Tribal Designated Statistical Area (TDSA)	4	3
State Reservation	10	5
State Designated Tribal Statistical Area (SDTSA)	30	29
Total	618	516

Source: 2008–2012 5-Year ACS data. For more information, see <http://www.census.gov/acs>

Additionally, this report provides rates in Appendix B for tribal subdivisions (summary level 251) of 24 federal reservations and two OTSAs. Of the 481 tribal subdivisions published in the 2008–2012 5-year ACS, 125 had too few sample cases to publish their individual rates.

III. Summary of Response Rate Results

Overall response and nonresponse rates, plus seven detailed reasons for noninterviews, are given in Table 2 for the United States and for several pooled areas. The rates for “All AIAN Areas” are calculated by pooling together all housing units eligible to be interviewed in all 618 AIAN areas. The rates for “Not an AIAN Area” are calculated by pooling together eligible cases in the rest of the country. Rates are also provided for the six AIAN area types, again by pooling together all housing units within areas of each type.

⁴ For the definitions of these geographic areas, see http://www.census.gov/geo/reference/gtc/gtc_aiannha.html. Area types in this report’s tables are ordered by the census code range assigned to them.

Table 2: Overall Response and Nonresponse Rates by Type of Area, 2008–2012 5-Year ACS

Areas	Response	Non-response	Refusal	Unable To Locate	No One Home	Temp Absent	Language Problem	Insufficient Data	Other
United States	97.6%	2.4%	1.0%	0.0%	0.6%	0.1%	0.0%	0.2%	0.4%
All AIAN Areas	97.9%	2.1%	0.8%	0.1%	0.5%	0.1%	0.0%	0.2%	0.4%
Not an AIAN Area	97.6%	2.4%	1.0%	0.0%	0.6%	0.1%	0.0%	0.2%	0.4%
Federal Res.	96.9%	3.1%	1.2%	0.1%	0.8%	0.2%	0.0%	0.1%	0.7%
OTSAs	98.6%	1.4%	0.5%	0.0%	0.3%	0.0%	0.0%	0.2%	0.3%
ANVSAs	95.6%	4.4%	2.5%	0.3%	0.7%	0.3%	0.0%	0.1%	0.5%
TDSAs	97.7%	2.3%	0.9%	0.2%	0.2%	0.2%	0.0%	0.3%	0.4%
State Reservations	65.1%	34.9%	20.7%	0.3%	10.3%	0.3%	0.0%	0.0%	3.3%
SDTSAs	97.7%	2.3%	0.8%	0.0%	0.6%	0.1%	0.0%	0.2%	0.6%

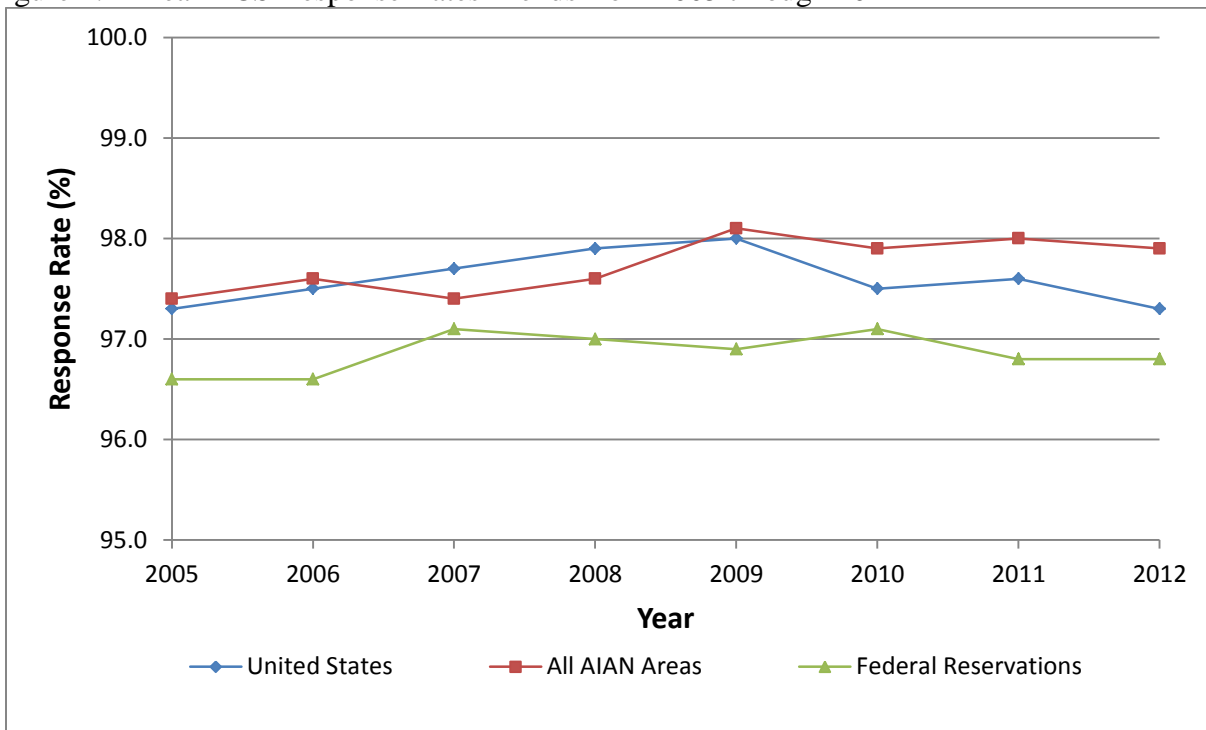

Source: 2008-2012 5-Year ACS data. For more information, see <http://www.census.gov/acs>

The combination of all AIAN areas has a higher response rate (97.9 percent) than the United States as a whole (97.6 percent). The response rates for federal reservations (96.9 percent) and ANVSAs (95.6 percent) are, while lower than the national rate, still considered very high. The response rate for state reservations is much lower than the other AIAN area types, but this is the smallest group (by population) of all the types, and the combined rate is being influenced by a few areas with relatively poor response rates.

All of the rates in Table 2 are subject to sampling error because they are based on a sample and not on the full population. A measure of sampling error known as the margin of error (MOE) is provided in Appendix C for each rate presented in Table 2, Appendix A, and Appendix B. These are calculated at the 90 percent level of confidence, which means there is a 90 percent probability that the estimate and the population value differ by no more than the value of the MOE.

A related question is whether the response rates have changed over time. Figure 1 shows the 1-year response rates from 2005 through 2012 for the nation as a whole, all pooled cases in AIAN areas, and all pooled cases on federal reservations.

Figure 1: 1-Year ACS Response Rates Trends from 2005 through 2012

Source: 2005 through 2012 1-Year ACS data. For more information, see <http://www.census.gov/acs>

The response rates for these areas have been both consistently high and fairly steady. Most rates are around 97 or 98 percent. Recent changes to nonresponse follow-up procedures in AIAN areas should help maintain the high rates in those areas.

Finally, we can look at the distribution of the response rates of the individual AIAN areas. As a comparison, the rates for all counties are included in Table 3 below with the AIAN area types.

Table 3: Distribution of Response Rates for AIAN Area Types

Areas	Total # Areas	Counts by Response Rate Range					Distribution by Response Rate Range				
		100 -90	<90 -80	<80 -70	<70 -50	<50 -0	100 -90	<90 -80	<80 -70	<70 -50	<50 -0
All AIAN areas	516	469	31	7	5	4	90.9%	6.0%	1.4%	1.0%	0.8%
Counties	3,143	3,141	2	0	0	0	99.9%	0.1%	0.0%	0.0%	0.0%
Federal Res.	254	217	24	5	5	3	85.4%	9.4%	2.0%	2.0%	1.2%
OTSAs	29	29	0	0	0	0	100.0%	0.0%	0.0%	0.0%	0.0%
ANVSAs	197	190	7	0	0	0	96.4%	3.6%	0.0%	0.0%	0.0%
TDSAs	3	3	0	0	0	0	100.0%	0.0%	0.0%	0.0%	0.0%
State Res.	4	2	0	1	0	1	50.0%	0.0%	25.0%	0.0%	25.0%
SDTSAs	29	28	0	1	0	0	96.6%	0.0%	3.4%	0.0%	0.0%

Source: 2008-2012 5-Year ACS data. For more information, see <http://www.census.gov/acs>

About 91 percent of the 516 AIAN areas have response rates of 90 percent or higher, and about 85 percent of federal reservations have response rates of 90 or percent higher. As a comparison, only two counties had response rates of 90 percent or less. Only 16 of the areas (3.1 percent)

have response rates of 80 percent or less. Of these 16 areas, six are in New York and four are in California. There are four areas – three federal reservations and one state reservation – with response rates of 50 percent or lower.

Of the 48 areas with fewer than 10 cases classified as “high” or “low” response in Appendix A, 42 have “high” response, and six have “low” response (above/below 80 percent). Overall, the vast majority of AIAN areas have very high response rates.

IV. Conclusions

The most important takeaway from this report is that response rates in AIAN areas for the ACS are very good.

- AIAN areas (pooled together) have a response rate higher than the rest of the country (97.9 percent to 97.6 percent).
- From 2005 through 2012, 1-year response rates for AIAN areas (pooled together) do not vary much and are comparable to the country as a whole.
- The response rates of individual AIAN areas are very high with few exceptions. Only 16 of 516 areas had response rates 80 percent or less, and only four had rates 50 percent or less.

Comments and questions should be directed to Mark Asiala, (301) 763-3605.

Appendix A – Response, Nonresponse, and Reason for Noninterview Rate Tables for AIAN Areas By Type

Table A1: Response, Nonresponse, and Reason for Noninterview Rates for Federal Reservations

Notes:

“ORTL” = Off-Reservation Trust Land

“High” indicates the area has a response rate of 80 percent or more, but is based on too few cases to publish the exact value.

“Low” indicates the area has a response rate of less than 80 percent, but is based on too few cases to publish the exact value.

A dash (“-”) indicates an insufficient number of cases to publish response and nonresponse rates for that area.

An “(X)” is used for the detailed noninterview rates if the response rate is 100 percent.

Notes:

"ORTL" = Off-Reservation Trust Land

"High" indicates the area has a response rate of 80 percent or more, but is based on too few cases to publish the exact value.

"Low" indicates the area has a response rate of less than 80 percent, but is based on too few cases to publish the exact value.

A dash ("-") indicates an insufficient number of cases to publish response and nonresponse rates for that area.

An "(X)" is used for the detailed noninterview rates if the response rate is 100 percent .

Notes:

"High" indicates the area has a response rate of 80 percent or more, but is based on too few cases to publish the exact value.

"Low" indicates the area has a response rate of less than 80 percent, but is based on too few cases to publish the exact value.

A dash ("-") indicates an insufficient number of cases to publish response and nonresponse rates for that area.

An "(X)" is used for the detailed noninterview rates if the response rate is 100 percent.

Notes:

"ORTL" = Off-Reservation Trust Land

"High" indicates the area has a response rate of 80 percent or more, but is based on too few cases to publish the exact value.

"Low" indicates the area has a response rate of less than 80 percent, but is based on too few cases to publish the exact value.

A dash ("-") indicates an insufficient number of cases to publish response and nonresponse rates for that area.

An "(X)" is used for the detailed noninterview rates if the response rate is 100 percent .

Notes:

"ORTL" = Off-Reservation Trust Land

A dash ("-") indicates an insufficient number of cases to publish margins of error for that area.

An "(X)" is used for the detailed noninterview rates if the response rate is 100 percent.

Notes:

A dash ("-") indicates an insufficient number of cases to publish response and nonresponse rates for that area.

An "(X)" is used for the detailed noninterview rates if the response rate is 100 percent.

Source: 2008-2012 5-Year ACS data. For more information, see <http://www.census.gov/acs>

Table C-A3: Margins of Error for Table A3, Response, Nonresponse, and Reason for Noninterview Rates for Alaska Native Village Statistical Areas (ANVSAs)

Notes:

A dash ("-") indicates an insufficient number of cases to publish response and nonresponse rates for that area.

An "(X)" is used for the detailed noninterview rates if the response rate is 100 percent.

Source: 2008-2012 5-Year ACS data. For more information, see <http://www.census.gov/acs>

Notes:

"ORTL" = Off-Reservation Trust Land

A dash ("-") indicates an insufficient number of cases to publish response and nonresponse rates for that area.

An "(X)" is used for the detailed noninterview rates if the response rate is 100 percent .
