The Supplemental Poverty Measure: 2018

Current Population Reports

L.intValue

The 2018 data reflect the implementation of an updated survey sampling scheme, which requires the use of special weights, and a revised income methodology. For more information, see: https://www.census.gov/program-methods/supplemental-poverty-measure/supplemental-poverty-measure-2018.html

Highlights:

- In 2018, the overall SPM rate was 12.0 percent. This is not statistically different from the 2017 SPM rate of 12.1 (Figure 1).
- SPM rates were not statistically different for any of the major age cohorts, with the exception of the 55-64 age group.

INTRODUCTION

Since the publication of the first official U.S. poverty estimates, researchers and policymakers have continued to discuss the best approach to measure income and poverty in the United States. Beginning in 2011, the U.S. Census Bureau began releasing the Supplemental Poverty Measure (SPM), which extends the official poverty measure by taking account of many of the government programs designed to assist low-income families and individuals that are not included in the official poverty measure. This is the third report describing the SPM, released by the Census Bureau with support from the Bureau of Labor Statistics (BLS). This report presents updated estimates of the prevalence of poverty in the United States using the official measure and the SPM based on information collected in 2018 and earlier Current Population Survey Annual Social and Economic Supplements (CPS-ASEC).
• Data are based on the Current Population Survey’s Annual Social and Economic Supplement (CPS ASEC) from March 2019.

• CPS ASEC is the official source of national poverty estimates.

• Official poverty estimates are calculated in accordance with OMB Statistical Policy Directive 14.
• Includes data from the Current Population Survey’s Annual Social and Economic Supplement (CPS ASEC) and the American Community Survey (ACS).

• ACS is the recommended source for smaller populations and levels of geography.
Important CPS ASEC Survey Updates

The CPS ASEC has undergone a redesign of the questionnaire and data processing system.

Questionnaire design changes incorporated over the period of 2014 to 2016:

• Updated income and means-tested benefit questions
• Redesigned health insurance questions
• Expanded family relationship categories
Important CPS ASEC Survey Updates

The CPS ASEC has undergone a redesign of the questionnaire and data processing system.

Questionnaire design changes incorporated over the period of 2014 to 2016:

• Updated income and means-tested benefit questions
• Redesigned health insurance questions
• Expanded family relationship categories

Data processing changes reflected for the first time this year:

• Improvements to how income data is edited and imputed
• More comprehensive and consistent treatment of families
• Expanded data on health insurance coverage and sources
Important Reminders for Today’s Presentations

In today’s presentations:
• Estimates for 2017 and 2018 reflect the updated processing system.
• 2017 estimates may differ from those published last year.

Median household income was $63,200 in 2018, not statistically different from the 2017 median, following three consecutive years of annual increases.
The official poverty rate in 2018 was 11.8 percent, down 0.5 percentage points from 2017. In 2018, there were 38.1 million people in poverty, a decrease of 1.4 million people from 2017.
The Supplemental Poverty Measure (SPM) rate in 2018 was 12.8 percent. This is not statistically different from the 2017 SPM rate of 13.0 percent.
The percentage of people without health insurance coverage for the entire calendar year was 8.5 percent, a 0.5 percentage-point increase from 2017. In 2018, 27.5 million people did not have health insurance coverage, an increase of 1.9 million people.

Note: The data for 2018 reflect the implementation of an updated CPS ASEC processing system.
