¹ The 2004 data have been revised to reflect a correction to the weights in the 2005 CPS ASEC.

² The 2014 CPS ASEC included redesigned questions for income and health insurance coverage. All of the approximately 98,000 addresses were eligible to receive the redesigned set of health insurance coverage questions. The redesigned income questions were implemented to a subsample of these 98,000 addresses using a probability split panel design. Approximately 68,000 addresses were eligible to receive a set of income questions similar to those used in the 2013 CPS ASEC and the remaining 30,000 addresses were eligible to receive the redesigned income questions. The source of these 2013 estimates is the portion of the CPS ASEC sample which received the income questions consistent with the 2013 CPS ASEC, approximately 68,000 addresses.

³ The source of these 2013 estimates is the portion of the CPS ASEC sample which received the redesigned income questions, approximately 30,000 addresses.

⁴ Implementation of an updated CPS ASEC processing system.

⁵ Implementation of 2020 Census-based population controls.

Note: For changes in survey and data processing methodology, see footnotes in Table A-1 of the report, *Income and Poverty in the United States: 2021*, U.S. Census Bureau, Current Population Reports, P60-276. Information on confidentiality protection, sampling error, nonsampling error, and definitions, is available at <www2.census.gov/programs-surveys/cps/techdocs/cpsmar22.pdf>.

Health Insurance Coverage: 2021

The percentage of people with health insurance coverage for some or all of calendar year 2021 increased by 0.4 percentage points to 91.7 percent.

Percentage of People by Type of Health Insurance Coverage: 2021

Coverage Type	2021		2020 ¹		Difference
	Percent	MOE ²	Percent	MOE ²	(2021 minus 2020)
Uninsured ³	8.3	0.2	8.6	0.2	*-0.4
With health insurance	91.7	0.2	91.4	0.2	*0.4
Any Private Plan ^{4,5}	66.0	0.3	66.5	0.4	*-0.6
Employment-based ⁴	54.3	0.3	54.6	0.3	-0.2
Direct-purchase ⁴	10.2	0.2	10.3	0.2	-0.1
Marketplace ⁴	3.5	0.1	3.3	0.1	0.1
Tricare ⁴	2.5	0.2	2.8	0.2	*-0.3
Any Public Plan ^{4,6}	35.7	0.3	34.5	0.3	*1.2
Medicare ⁴	18.4	0.1	17.9	0.1	*0.5
Medicaid ⁴	18.9	0.3	17.9	0.3	*0.9
VA and CHAMPVA ^{4,7}	1.0	0.1	0.9	0.1	0.1

*Denotes a statistically significant difference at the 90 percent confidence level between 2020 and 2021.

¹ Implementation of 2020 Census-based population controls.

² A margin of error (MOE) is a measure of an estimate's variability. The larger the MOE in relation to the size of the estimate, the less reliable the estimate. This number, when added to and subtracted from the estimate, forms the 90 percent confidence interval. MOEs shown in this table are based on standard errors calculated using replicate weights.

³ In the CPS ASEC, individuals are considered to be uninsured if they do not have health insurance coverage for the entire calendar year.

⁴ The estimates by type of coverage are not mutually exclusive; people can be covered by more than one type of health insurance during the year.

⁵ Private health insurance includes coverage provided through an employer or union, coverage purchased directly, or TRICARE.

⁶ Public health insurance coverage includes Medicaid, Medicare, CHAMPVA (Civilian Health and Medical Program of the Department of Veterans Affairs), and care provided by the Department of Veterans Affairs and the military.

⁷ Includes CHAMPVA, as well as care provided by the Department of Veterans Affairs and the military.

Note: Details may not sum to totals due to rounding. Population as of March of the following year.

Income and Poverty Estimates

Liana E. Fox

Assistant Division Chief

Economic Characteristics

What is Money Income?

INCLUDES:

- Wages and earnings
- Social Security
- Unemployment
- Retirement
- Interest & dividends
- Public Assistance

DOES NOT INCLUDE:

- Taxes Paid
- Tax Credits
- Stimulus payments
- Noncash assistance (SNAP, Medicaid, etc.)

Highlights: Income, earnings, and workers

Between 2020 and 2021:

- Real median household income was not statistically different
- Income inequality as measured by the Gini index, increased by 1.2 percent
- The number of total workers was not statistically different, but there was an increase of about 11.1 million full-time, year-round workers
- The real median earnings of total workers increased 4.6 percent, while median earnings of those who worked full-time, year-round decreased 4.1 percent

N Not available.

¹ Starting with the 2003 CPS ASEC, respondents were allowed to choose more than one race. This table presents the single-race population for 2002 to present. For example White alone refers to people who reported White and did not report any other race category. For 2001 and earlier years, the CPS allowed respondents to report only one race group.

² The 2004 data have been revised to reflect a correction to the weights in the 2005 CPS ASEC.

³ The 2014 CPS ASEC included redesigned questions for income and health insurance coverage. All of the approximately 98,000 addresses were eligible to receive the redesigned set of health insurance coverage questions. The redesigned income questions were implemented to a subsample of these 98,000 addresses using a probability split panel design. Approximately 68,000 addresses were eligible to receive a set of income questions similar to those used in the 2013 CPS ASEC and the remaining 30,000 addresses were eligible to receive the redesigned income questions. The source of these 2013 estimates is the portion of the CPS ASEC sample which received the income questions consistent with the 2013 CPS ASEC, approximately 68,000 addresses.

⁴ The source of these 2013 estimates is the portion of the CPS ASEC sample which received the redesigned income questions, approximately 30,000 addresses.

⁵ Estimates reflect the implementation of an updated data processing system, allowing users to evaluate the impact, and should be used to make comparisons to 2018 and subsequent years.

⁶ Implementation of 2020 Census-based population controls.

Note: For changes in survey and data processing methodology, refer to footnotes in Appendix Table A-2 of the report, *Income in the United States: 2021*, U.S. Census Bureau, Current Population Reports, P60-276. Information on confidentiality protection, sampling error, nonsampling error, and definitions is available at <<https://www2.census.gov/programs-surveys/cps/techdocs/cpsmar22.pdf>>.

¹The 2004 data have been revised to reflect a correction to the weights in the 2005 CPS ASEC.

²Data are based on the CPS ASEC sample of 68,000 addresses. The 2014 CPS ASEC included redesigned questions for income and health insurance coverage. All of the approximately 98,000 addresses were eligible to receive the redesigned set of health insurance coverage questions. The redesigned income questions were implemented to a subsample of these 98,000 addresses using a probability split panel design. Approximately 68,000 addresses were eligible to receive a set of income questions similar to those used in the 2013 CPS ASEC and the remaining 30,000 addresses were eligible to receive the redesigned income questions. The source of these 2013 data is the portion of the CPS ASEC sample which received the redesigned income questions, approximately 30,000 addresses.

³Implementation of an updated CPS ASEC processing system.

⁴Implementation of 2020 Census-based population controls.

Note: For changes in survey and data processing methodology, see footnotes in Appendix Table A-7 of the report, *Income and Poverty in the United States: 2021*, U.S. Census Bureau, Current Population Reports, P60-276. For information on confidentiality protection, sampling error, nonsampling error, and definitions, see <<https://www2.census.gov/programs-surveys/cps/techdocs/cpsmar22.pdf>>.

Poverty in the United States

- This marks the first year that the Census Bureau has produced a report with the official poverty measure and the Supplemental Poverty Measure (SPM).
- The combined poverty report provides two distinct indicators of economic well-being in the United States.

Highlights

- The official poverty rate in 2021 was 11.6 percent, with 37.9 million people in poverty.
- The SPM rate in 2021 was 7.8 percent, a decrease of 1.4 percentage points from 2020.
- The SPM rate for children was 5.2 percent in 2021, a decrease of 4.5 percentage points from 2020.
- Refundable tax credits, including the Child Tax Credit in 2021, kept 9.6 million people out of poverty.

How the Census Bureau Measures Poverty: Official Poverty

INCLUDES:

- Wages and earnings
- Social Security
- Unemployment
- Retirement
- Interest & dividends
- Public Assistance

DOES NOT INCLUDE:

- Taxes Paid
- Tax Credits
- Stimulus payments
- Noncash assistance (SNAP, Medicaid, etc.)

Threshold adjusted for
family composition

¹ Implementation of 2010 Census-based population controls

²The 2014 CPS ASEC included redesigned questions for income and health insurance coverage. All of the approximately 98,000 addresses were eligible to receive the redesigned set of health insurance coverage questions. The redesigned income questions were implemented to a subsample of these 98,000 addresses using a probability split panel design. Approximately 68,000 addresses were eligible to receive a set of income questions similar to those used in the 2013 CPS ASEC and the remaining 30,000 addresses were eligible to receive the redesigned income questions. The source of these 2013 estimates is the portion of the CPS ASEC sample which received the income questions consistent with the 2013 CPS ASEC, approximately 68,000 addresses.

³The source of these 2013 estimates is the portion of the CPS ASEC sample which received the redesigned income questions, approximately 30,000 addresses.

Historical Poverty Footnotes

N Not available.

¹ Implementation of 2020 Census-based population controls.

² Estimates reflect the implementation of an updated processing system and should be used to make comparisons to 2018 and subsequent years.

³ The 2014 CPS ASEC included redesigned questions for income and health insurance coverage. All of the approximately 98,000 addresses were eligible to receive the redesigned set of health insurance coverage questions. The redesigned income questions were implemented to a subsample of the 98,000 addresses using a probability split panel design. Approximately 68,000 addresses were eligible to receive a set of income questions similar to those used in the 2013 CPS ASEC, and the remaining 30,000 addresses were eligible to receive the redesigned income questions. The source of these 2013 estimates is the portion of the CPS ASEC sample that received the redesigned income questions, approximately 30,000 addresses.

⁴ The source of these 2013 estimates is the portion of the CPS ASEC sample that received the income questions consistent with the 2013 CPS ASEC, approximately 68,000 addresses.

⁵ Implementation of 2010 Census-based population controls.

⁶ Data have been revised to reflect a correction to the weights in the 2005 CPS ASEC.

⁷ Implementation of a 28,000 household expansion.

⁸ Implementation of 2000 Census-based population controls.

⁹ Full implementation of 1990 Census-based sample design and metropolitan definitions, 7,000 household sample reduction, and revised editing of responses on race.

¹⁰ Introduction of 1990 Census sample design.

¹¹ Data collection method changed from paper and pencil to computer-assisted interviewing. In addition, the 1994 CPS ASEC was revised to allow for the coding of different income amounts on selected questionnaire items. Limits either increased or decreased in the following categories: earnings limits increased to \$999,999; social security limits increased to \$49,999; supplemental security income and public assistance limits increased to \$24,999; veterans' benefits limits increased to \$99,999; child support and alimony limits decreased to \$49,999.

¹² Implementation of 1990 Census population controls.

¹³ Estimates are revised to correct for nine omitted weights from the original 1992 CPS ASEC. More information is available in "Money Income of Households, Families, and Persons in the United States: 1992" P60-184.

¹⁴ Estimates reflect the implementation of a new CPS ASEC processing system and are also revised to reflect corrections to the files after publication of the 1988 advance report "Money Income and Poverty Status in the United States: 1988" P60-166.

¹⁵ Full implementation of 1980 Census-based sample design.

¹⁶ Implementation of Hispanic population weighting controls and introduction of 1980 Census-based sample design.

¹⁷ Implemented three technical changes to the poverty definition. More information is available in "Characteristics of the Population Below the Poverty Level: 1980" P60-133.

¹⁸ Implementation of 1980 Census population controls.

Questionnaire expanded to show 27 possible values from 51 possible sources of income.

¹⁹ Implementation of a new CPS ASEC processing system.

Questionnaire expanded to ask 11 income questions.

²⁰ Full implementation of 1970 Census-based sample design.

²¹ Introduction of 1970 Census sample design and population controls.

²² Implementation of a new CPS ASEC processing system.

²³ Beginning with the 2003 CPS ASEC, respondents were allowed to choose one or more races. White alone refers to people who reported White and did not report any other race category. The use of this single-race population does not imply that it is the preferred method of presenting or analyzing the data. The Census Bureau uses a variety of approaches.

²⁴ For the year 2001 and earlier, the CPS ASEC allowed respondents to report only one race group.

²⁵ Black alone refers to people who reported Black and did not report any other race category.

²⁶ Asian alone refers to people who reported Asian and did not report any other race category.

²⁷ American Indian and Alaska Native alone refers to people who reported American Indian and Alaska Native and did not report any other race category.

²⁸ Because Hispanics may be any race, data in this report for Hispanics overlap with data for racial groups. Of those who reported only one race, being Hispanic was reported by 16.6 percent of White householders, 5.6 percent of Black householders, 2.9 percent of Asian householders, and 29.7 percent of American Indian and Alaska Native householders. Data users should exercise caution when interpreting aggregate results for the Hispanic population and for race groups because these populations consist of many distinct groups that differ in socioeconomic characteristics, culture, and recency of immigration. Data were first collected for Hispanics in 1972.

Note: Before 1979, unrelated subfamilies were included in all families. Beginning in 1979, unrelated subfamilies are excluded from all families. An unrelated subfamily is defined as a married couple family with or without children or a single parent with one or more own, never-married, children under the age of 18 living in a household and not related by birth, marriage, or adoption to the householder.

Medicare ⁴	18.4	0.1	17.9	0.1	*0.5
Medicaid ⁴	18.9	0.3	17.9	0.3	*0.9
VA and CHAMPVA ^{4,7}	1.0	0.1	0.9	0.1	0.1

*Denotes a statistically significant difference at the 90 percent confidence level between 2020 and 2021.

¹ Implementation of 2020 Census-based population controls.

² A margin of error (MOE) is a measure of an estimate's variability. The larger the MOE in relation to the size of the estimate, the less reliable the estimate. This number, when added to and subtracted from the estimate, forms the 90 percent confidence interval. MOEs shown in this table are based on standard errors calculated using replicate weights.

³ In the CPS ASEC, individuals are considered to be uninsured if they do not have health insurance coverage for the entire calendar year.

⁴ The estimates by type of coverage are not mutually exclusive; people can be covered by more than one type of health insurance during the year.

⁵ Private health insurance includes coverage provided through an employer or union, coverage purchased directly, or TRICARE.

⁶ Public health insurance coverage includes Medicaid, Medicare, CHAMPVA (Civilian Health and Medical Program of the Department of Veterans Affairs), and care provided by the Department of Veterans Affairs and the military.

⁷ Includes CHAMPVA, as well as care provided by the Department of Veterans Affairs and the military.

Note: Details may not sum to totals due to rounding. Population as of March of the following year.

Source: U.S. Census Bureau, Current Population Survey, 2021 and 2022 Annual Social and Economic Supplements (CPS ASEC).

Examining Change in Health Insurance Coverage

- Economic conditions
- Demographic composition of the population
- Policy environment

Examples:

- Economic recovery from 2020 recession
- American Rescue Plan Act (ARPA)
- Families First Coronavirus Response Act (FFCRA)
- Medicaid expansion (Nebraska as of 1/1/2021)

Percentage of People Uninsured by Age Group: 2020 and 2021

¹ Implementation of 2020 Census-based population controls.

*Denotes a statistically significant difference at the 90 percent confidence level between 2020 and 2021.

Note: People are considered uninsured if they do not hold insurance for the entire calendar year. Population as of March of the following year.

Source: U.S. Census Bureau, Current Population Survey, 2021 and 2022 Annual Social and Economic Supplements (CPS ASEC).

Percentage of People Uninsured by Age Group: 2020 and 2021

Age Group	2021		2020 ¹		Percentage Point Change
	Percent	MOE ²	Percent	MOE ²	(2021 minus 2020)
Under age 19	5.0	0.3	5.6	0.3	*-0.6
Aged 19 to 25	14.9	0.6	14.3	0.6	0.5
Aged 26 to 34	13.5	0.6	14.1	0.6	-0.7
Aged 35 to 44	11.9	0.6	12.5	0.5	-0.6
Aged 45 to 64	9.4	0.4	9.8	0.3	-0.3
Aged 65 or over	1.2	0.1	1.0	0.1	0.1

¹ Implementation of 2020 Census-based population controls.

² The margin of error (MOE) is a measure of an estimate's variability. The larger the MOE in relation to the size of the estimate, the less reliable the estimate. This number, when added to and subtracted from the estimate, forms the 90 percent confidence interval. MOEs shown in this table are based on standard errors calculated using replicate weights.

*Denotes a statistically significant difference at the 90 percent confidence level between 2020 and 2021.

Note: Details may not sum to totals due to rounding. People are considered uninsured if they do not hold insurance for the entire calendar year. Population as of March of the following year.
