FOR RELEASE AT 8:30 AM EST, TUESDAY, FEBRUARY 28, 2017

MONTHLY ADVANCE ECONOMIC INDICATORS REPORT, JANUARY 2017

Release Number: CB17-31

February 28, 2017 — The U.S. Census Bureau announced the following international trade, wholesale inventories, and retail inventories advance statistics for January 2017:

<table>
<thead>
<tr>
<th>Advance International Trade: Goods Deficit</th>
<th>Advance Wholesale Inventories</th>
<th>Advance Retail Inventories</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>JANUARY 2017</strong></td>
<td><strong>DECEMBER 2016</strong></td>
<td></td>
</tr>
<tr>
<td>$69.2 Billion</td>
<td>$599.9 Billion</td>
<td>$613.4 Billion</td>
</tr>
<tr>
<td>+7.6%*</td>

<td>$600.6 Billion (R)</td>
<td>$608.6 Billion (R)</td>
</tr>
</tbody>
</table>

* The 90 percent confidence interval includes zero. There is insufficient evidence to conclude that the actual change is different from zero.
* Statistical significance is not applicable or not measurable.
Data adjusted for seasonality but not price changes.

Source: U.S. Census Bureau; Advance Economic Indicators Report, February 28, 2017.

Advance International Trade in Goods
The international trade deficit was $69.2 billion in January, up $4.9 billion from $64.4 billion in December. Exports of goods for January were $126.2 billion, $0.4 billion less than December exports. Imports of goods for January were $195.4 billion, $4.4 billion more than December imports.

Advance Wholesale Inventories
Wholesale inventories for January, adjusted for seasonal variations but not for price changes, were estimated at an end-of-month level of $599.9 billion, down 0.1 percent (±0.2 percent)* from December 2016, and were up 2.2 percent (±0.7 percent) from January 2016. The November 2016 to December 2016 percentage change was revised from up 1.0 percent (±0.4 percent) to up 0.9 percent (±0.4 percent).

Advance Retail Inventories
Retail inventories for January, adjusted for seasonal variations but not for price changes, were estimated at an end-of-month level of $613.4 billion, up 0.8 percent (±0.2 percent) from December 2016, and were up 4.0 percent (±0.5 percent) from January 2016. The November 2016 to December 2016 percentage change was revised from up 0.1 percent (±0.2 percent)* to virtually unchanged (±0.2 percent)*.

The February 2017 Advance report is scheduled for release on March 28, 2017. View the full schedule in the Economic Briefing Room: <www.census.gov/economic-indicators/>. The full text and tables of this release can be found at <www.census.gov/econ/indicators/>.
EXPLANATORY NOTES

Intention to Revise: Revisions to the Wholesale and Retail adjusted and not adjusted monthly estimates are scheduled for release in March 2017 and April 2017, respectively. Estimates will be revised to reflect the results of the 2015 Annual Wholesale and Annual Retail Trade Surveys. Revisions to the Monthly Wholesale estimates will be reflected in the February 2017 Advance Economic Indicators release scheduled for March 28, 2017. Revisions to the Monthly Retail estimates will be reflected in the March 2017 Advance Economic Indicators release scheduled for April 27, 2017.

International Trade in Goods

Goods (Census Basis)
Data for goods on a Census basis are compiled from the documents collected by the U.S. Customs and Border Protection and reflect the movement of goods between foreign countries and the 50 states, the District of Columbia, Puerto Rico, the U.S. Virgin Islands, and U.S. Foreign Trade Zones. They include government and non-government shipments of goods and exclude shipments between the United States and its territories and possessions; transactions with U.S. military, diplomatic, and consular installations abroad; U.S. goods returned to the United States by its Armed Forces; personal and household effects of travelers; and in-transit shipments. Data for U.S. exports to Canada are derived from import data compiled by Canada. For more information on the data exchange and substitution please refer to the FT-900. The General Imports value reflects the total arrival of merchandise from foreign countries that immediately enters consumption channels, warehouses, or Foreign Trade Zones.

For imports, the value reported is the U.S. Customs and Border Protection appraised value of merchandise—generally, the price paid for merchandise for export to the United States. Import duties, freight, insurance, and other charges incurred in bringing merchandise to the United States are excluded. Exports are valued at the free alongside ship value of merchandise at the U.S. port of export, based on the transaction price including inland freight, insurance, and other charges incurred in placing the merchandise alongside the carrier at the U.S. port of exportation.

Additional information on coverage and valuation are available in the Guide to Foreign Trade Statistics, <www.census.gov/foreign-trade/guide/sec2.html#coverage> and <www.census.gov/foreign-trade/guide/sec2.html#valuation>, respectively.

Non Sampling Errors
Goods data are a complete enumeration of documents collected by the U.S. Customs and Border Protection and are not subject to sampling errors. This report presents current month statistics which reflect nearly complete coverage. Current month statistics reflecting complete coverage will be published in the upcoming U.S. International Trade in Goods and Services report (FT-900). Statistics for other months shown reflect complete coverage and appear in the most recently published FT-900. Quality assurance procedures are
performed at every stage of collection, processing, and tabulation. However, the data are still subject to several types of nonsampling errors. Information on nonsampling errors and other quality issues are available in the Guide to Foreign Trade Statistics, <www.census.gov/foreign-trade/guide/sec2.html>.

The U.S. Census Bureau recommends that data users incorporate this information into their analyses, as nonsampling errors could impact the conclusion drawn from the results. For a detailed discussion of errors affecting the goods data, see U.S. Merchandise Trade Statistics: A Quality Profile (October 2014), available at <www.census.gov/foreign-trade/aip/quality_profile10032014.pdf> or from the Economic Indicators Division, U.S. Census Bureau.

**Adjustments for Seasonal and Trading-Day Variations**

Goods data are presented on a seasonally adjusted and not seasonally adjusted basis. Seasonally adjusted (and/or trading day adjusted data) are produced using X-13ARIMA-SEATS software to develop monthly adjustment factors. Goods data are initially classified under the Harmonized Commodity Description and Coding System (Harmonized System), which is an internationally accepted standard for the commodity classification of traded goods. Combining trade into approximately 140 export and 140 import end-use categories makes it possible to examine goods according to their principal uses. These categories are used as the basis for computing the seasonal and trading-day adjusted data. These adjusted data are then summed to the six end-use aggregates for publication.

For more information, visit the seasonal adjustment section of the Guide to Foreign Trade here: <www.census.gov/foreign-trade/guide/sec2.html#seasonal>

**Retail and Wholesale Inventories**

National estimates of end-of-month inventories are based on data from the Monthly Retail Trade Survey and the Monthly Wholesale Trade Survey. Additional information for each survey can be found at <www.census.gov/retail> and <www.census.gov/wholesale>. The advance estimates contained in this report are not incorporated into the full MRTS and MWTS time series.

The MRTS and MWTS samples consist of a stratified simple random sampling method of approximately 10,000 retail firms and 4,200 wholesale firms located in the United States. The retail and wholesale samples include firms of all sizes and are updated on a quarterly basis to account for new retail and wholesale firms, deaths, and other changes to the universe.

Data for nonresponding firms are imputed based on data for similar-sized firms classified in the same kind of business. For surveyed Retail companies, approximately 44.2 percent provided data for this reporting period resulting in a total quantity response rate of 55.6 percent. For surveyed Wholesale companies, approximately 54.4 percent provided data for this reporting period resulting in a total quantity response rate of 53.8 percent.
MRTS estimates cover companies with one or more establishments that sell merchandise and related services to final consumers. Nonemployers are represented in the retail estimates through benchmarking to prior annual survey estimates that include nonemployer sales based on administrative records.

MWTS estimates cover wholesale merchants who sell goods on their own account and include such businesses as wholesale merchants or jobbers, industrial distributors, exporters, and importers. Sales offices and branches maintained by manufacturing, refining, or mining firms for the purpose of marketing their products are not covered in this report. Also excluded is NAICS Industry Group 4251: Wholesale Electronic Markets and Agents and Brokers.

Reliability of Estimates
Because the retail and wholesale estimates are based on a sample survey, they contain sampling error and nonsampling error.

Sampling error is the difference between the estimate and the result that would be obtained from a complete enumeration of the sampling frame conducted under the same survey conditions. This error occurs because only a subset of the entire sampling frame is measured in a sample survey. Standard errors and coefficients of variation are estimated measures of sampling variation.

The margin of sampling error gives a range about the estimate which is a 90 percent confidence interval. If, for example, the percentage change estimate is +1.2 percent and its estimated standard error is 0.9 percent, then the margin of sampling error is ±1.753 x 0.9 percent or ±1.6 percent, and the 90 percent confidence interval is −0.4 percent to +2.8 percent. If the interval contains 0, then one does not have sufficient evidence to conclude at the 90 percent confidence level that the change is different from zero and therefore the change is not statistically significant. Estimated changes are statistically significant unless otherwise noted. For a monthly total, the estimated coefficient of variation is given. The resulting confidence interval is the estimated value ±1.753 x CV x (the estimated monthly total).

Nonsampling error encompasses all other factors that contribute to the total error of a sample survey estimate. This type of error can occur because of nonresponse, insufficient coverage of the universe of businesses, mistakes in the recording and coding of data, and other errors of collection, response, coverage, or processing. Although nonsampling error is not measured directly, the Census Bureau employs quality control procedures throughout the process to minimize this type of error.

The U.S. Census Bureau recommends that individuals using retail and wholesale estimates incorporate this information into their analyses, as sampling error and nonsampling error could affect the conclusions drawn from the estimates.

Adjustments for Seasonal Variations
Concurrent seasonal adjustment is used to adjust the retail and wholesale inventories estimates for seasonal variations. Concurrent seasonal adjustment uses all available unadjusted estimates as input to the X-
13ARIMA-SEATS program. The factors derived from the program are applied to the retail and wholesale estimates of current and previous month inventories and for inventories estimates a year ago as well.

**Data Availability**
The Advance Economic Indicators Report is available at <www.census.gov/econ/indicators/index.html>. For archived versions of the Advance Economic Indicators Report please visit the Historical Data tab at the following: <census.gov/econ/indicators/historical_data.html>.

**America’s Economy Mobile App**
The America’s Economy app provides real-time updates for 19 key economic indicators released from the U.S. Census Bureau, Bureau of Labor Statistics, and Bureau of Economic Analysis. <www.census.gov/mobile/economy/>

**API**
The Census Bureau’s application programming interface lets developers create custom apps to reach new users and makes key demographic, socio-economic and housing statistics more accessible than ever before. <www.census.gov/developers/>

(a) Advance statistics

(1) For a listing of the detail included in each end-use category, see <www.census.gov/foreign-trade/reference/codes/enduse/exeumstr.txt>.
(2) Data are presented on a Census basis. The information needed to convert to a balance of payment basis is not available.
(3) Includes petroleum and petroleum products.

NOTES:
- Current month statistics reflect nearly complete coverage; current month statistics reflecting complete coverage will be published in the upcoming U.S. International Trade in Goods and Services report (FT-900). Statistics for other months shown reflect complete coverage and appear in the most recently published FT-900.
- For information on data sources, nonsampling errors, and definitions, see the explanatory notes in this release or at <www.census.gov/econ/indicators/advance_report.pdf>.
