FOR RELEASE AT 8:30 AM EDT, THURSDAY, MAY 25, 2017

MONTHLY ADVANCE ECONOMIC INDICATORS REPORT, APRIL 2017

Release Number: CB17-82

May 25, 2017 — The U.S. Census Bureau announced the following international trade, wholesale inventories, and retail inventories advance statistics for April 2017:

	ADVANCE INTERNATIONAL TRADE: GOODS DEFICIT	ADVANCE WHOLESALE INVENTORIES	ADVANCE RETAIL INVENTORIES		
APRIL 2017	\$67.6 Billion +3.8%°	\$592.0 Billion -0.3%*	\$613.5 Billion -0.3%		
MARCH 2017	\$65.1 Billion	\$594.1 Billion (R)	\$615.2 Billion (R)		

Next release: June 28, 2017.

Advance International Trade in Goods

The international trade deficit was \$67.6 billion in April, up \$2.5 billion from \$65.1 billion in March. Exports of goods for April were \$125.9 billion, \$1.1 billion less than March exports. Imports of goods for April were \$193.4 billion, \$1.4 billion more than March imports.

Advance Wholesale Inventories

Wholesale inventories for April, adjusted for seasonal variations but not for price changes, were estimated at an end-of-month level of \$592.0 billion, down 0.3 percent (±0.4 percent)* from March 2017, and were up 1.8 percent (±1.1 percent) from April 2016. The February 2017 to March 2017 percentage change was revised from up 0.2 percent (±0.4 percent)* to up 0.1 percent (±0.4 percent)*.

Advance Retail Inventories

Retail inventories for April, adjusted for seasonal variations but not for price changes, were estimated at an end-of-month level of \$613.5 billion, down 0.3 percent (± 0.2 percent) from March 2017, and were up 3.0 percent (± 0.5 percent) from April 2016. The February 2017 to March 2017 percentage change was revised from up 0.5 percent (± 0.2 percent) to up 0.3 percent (± 0.2 percent).

The May 2017 Advance report is scheduled for release on June 28, 2017. View the full schedule in the Economic Briefing Room: www.census.gov/economic-indicators/>. The full text and tables of this release can be found at www.census.gov/econ/indicators/>.

Data Inquiries

International Trade Indicator Branch: 301-763-2311 eid.international.trade.data@census.gov Retail Indicator Branch: 301-763-2713 eid.retail.indicator.branch@census.gov Wholesale Indicator Branch: 301-763-6856 eid.wholesale.indicator.branch@census.gov

^{*} The 90 percent confidence interval includes zero. There is insufficient evidence to conclude that the actual change is different from zero.

[°] Statistical significance is not applicable or not measurable.

Data adjusted for seasonality but not price changes.

NOTICES

International Trade in Goods

Special Notice: Beginning on May 25, 2017, the April Advance Economic Indicators Report will reflect recalculated seasonal adjustments for all seasonally adjusted trade in goods data shown in Table 1. Previously, the April Advance Economic Indicators Report showed "Advance" seasonally adjusted data with recalculated seasonal adjustments alongside "Final" statistics with previously published seasonal adjustments. This improvement, resulting from annual revisions to all seasonal factors, will allow for the consistent comparison between the April Advance totals and prior month totals. As a result, for every subsequent April Advance Economic Indicators Report, prior month and prior year international trade in goods statistics will not match those shown in the most recently published FT-900 U.S. International Trade in Goods and Services Release.

EXPLANATORY NOTES

International Trade in Goods

Goods (Census Basis)

Data for goods on a Census basis are compiled from the documents collected by the U.S. Customs and Border Protection and reflect the movement of goods between foreign countries and the 50 states, the District of Columbia, Puerto Rico, the U.S. Virgin Islands, and U.S. Foreign Trade Zones. They include government and non-government shipments of goods and exclude shipments between the United States and its territories and possessions; transactions with U.S. military, diplomatic, and consular installations abroad; U.S. goods returned to the United States by its Armed Forces; personal and household effects of travelers; and in-transit shipments. Data for U.S. exports to Canada are derived from import data compiled by Canada. For more information on the data exchange and substitution please refer to the FT-900. The General Imports value reflects the total arrival of merchandise from foreign countries that immediately enters consumption channels, warehouses, or Foreign Trade Zones.

For imports, the value reported is the U.S. Customs and Border Protection appraised value of merchandise—generally, the price paid for merchandise for export to the United States. Import duties, freight, insurance, and other charges incurred in bringing merchandise to the United States are excluded.

Exports are valued at the free alongside ship value of merchandise at the U.S. port of export, based on the transaction price including inland freight, insurance, and other charges incurred in placing the merchandise alongside the carrier at the U.S. port of exportation.

Additional information on coverage and valuation are available in the Guide to Foreign Trade Statistics, <www.census.gov/foreign-trade/guide/sec2.html#coverage> and <www.census.gov/foreign-trade/guide/sec2.html#valuation>, respectively.

Non Sampling Errors

Goods data are a complete enumeration of documents collected by the U.S. Customs and Border Protection and are not subject to sampling errors. This report presents current month statistics which reflect nearly complete coverage. Current month statistics reflecting complete coverage will be published in the upcoming U.S. International Trade in Goods and Services report (FT-900). Statistics for other months shown reflect complete coverage and appear in the most recently published FT-900. Quality assurance procedures are performed at every stage of collection, processing, and tabulation. However, the data are still subject to several types of nonsampling errors. Information on nonsampling errors and other quality issues are available in the Guide to Foreign Trade Statistics, <wave.census.gov/foreign-trade/guide/sec2.html>.

The U.S. Census Bureau recommends that data users incorporate this information into their analyses, as nonsampling errors could impact the conclusion drawn from the results. For a detailed discussion of errors affecting the goods data, see U.S. Merchandise Trade Statistics: A Quality Profile (October 2014), available at <www.census.gov/foreign-trade/aip/quality_profile10032014.pdf> or from the Economic Indicators Division, U.S. Census Bureau.

Adjustments for Seasonal and Trading-Day Variations

Goods data are presented on a seasonally adjusted and not seasonally adjusted basis. Seasonally adjusted (and/or trading day adjusted data) are produced using X-13ARIMA-SEATS software to develop monthly adjustment factors. Goods data are initially classified under the Harmonized Commodity Description and Coding System (Harmonized System), which is an internationally accepted standard for the commodity classification of traded goods. Combining trade into approximately 140 export and 140 import end-use categories makes it possible to examine goods according to their principal uses. These categories are used as the basis for computing the seasonal and trading-day adjusted data. These adjusted data are then summed to the six end-use aggregates for publication.

For more information, visit the seasonal adjustment section of the Guide to Foreign Trade here: www.census.gov/foreign-trade/guide/sec2.html#seasonal>

Retail and Wholesale Inventories

National estimates of end-of-month inventories are based on data from the Monthly Retail Trade Survey and the Monthly Wholesale Trade Survey. Additional information for each survey can be found at <<u>www.census.gov/retail</u>> and <<u>www.census.gov/wholesale</u>>. The advance estimates contained in this report are not incorporated into the full MRTS and MWTS time series.

The MRTS and MWTS samples consist of a stratified simple random sampling method of approximately 10,000 retail firms and 4,200 wholesale firms located in the United States. The retail and wholesale samples include firms of all sizes and are updated on a quarterly basis to account for new retail and wholesale firms, deaths, and other changes to the universe.

pio@census.gov

Data for nonresponding firms are imputed based on data for similar-sized firms classified in the same kind of business. For surveyed Retail companies, approximately 45.1 percent provided data for this reporting period resulting in a total quantity response rate of 55.7 percent. For surveyed Wholesale companies, approximately 54.7 percent provided data for this reporting period resulting in a total quantity response rate of 57.4 percent.

MRTS estimates cover companies with one or more establishments that sell merchandise and related services to final consumers. Nonemployers are represented in the retail estimates through benchmarking to prior annual survey estimates that include nonemployer sales based on administrative records.

MWTS estimates cover wholesale merchants who sell goods on their own account and include such businesses as wholesale merchants or jobbers, industrial distributors, exporters, and importers. Sales offices and branches maintained by manufacturing, refining, or mining firms for the purpose of marketing their products are not covered in this report. Also excluded is NAICS Industry Group 4251: Wholesale Electronic Markets and Agents and Brokers.

Reliability of Estimates

Because the retail and wholesale estimates are based on a sample survey, they contain sampling error and nonsampling error.

Sampling error is the difference between the estimate and the result that would be obtained from a complete enumeration of the sampling frame conducted under the same survey conditions. This error occurs because only a subset of the entire sampling frame is measured in a sample survey. Standard errors and coefficients of variation are estimated measures of sampling variation.

The margin of sampling error gives a range about the estimate which is a 90 percent confidence interval. If, for example, the percentage change estimate is ± 1.2 percent and its estimated standard error is 0.9 percent, then the margin of sampling error is $\pm 1.753 \times 0.9$ percent or ± 1.6 percent, and the 90 percent confidence interval is ± 0.4 percent to ± 2.8 percent. If the interval contains 0, then one does not have sufficient evidence to conclude at the 90 percent confidence level that the change is different from zero and therefore the change is not statistically significant. Estimated changes are statistically significant unless otherwise noted. For a monthly total, the estimated coefficient of variation is given. The resulting confidence interval is the estimated value $\pm 1.753 \times CV \times ($ the estimated monthly total).

Nonsampling error encompasses all other factors that contribute to the total error of a sample survey estimate. This type of error can occur because of nonresponse, insufficient coverage of the universe of businesses, mistakes in the recording and coding of data, and other errors of collection, response, coverage, or processing. Although nonsampling error is not measured directly, the Census Bureau employs quality control procedures throughout the process to minimize this type of error.

pio@census.gov

The U.S. Census Bureau recommends that individuals using retail and wholesale estimates incorporate this information into their analyses, as sampling error and nonsampling error could affect the conclusions drawn from the estimates.

Adjustments for Seasonal Variations

Concurrent seasonal adjustment is used to adjust the retail and wholesale inventories estimates for seasonal variations. Concurrent seasonal adjustment uses all available unadjusted estimates as input to the X-13ARIMA-SEATS program. The factors derived from the program are applied to the retail and wholesale estimates of current and previous month inventories and for inventories estimates a year ago as well.

Retail trade, total	0.8	0.8	0.8	0.1	0.1	0	
Total (excl. motor veh. & parts)	0.6	0.6	0.6	0.0	0.1	0.	
Motor vehicle & parts dealers	1.5	1.5	1.6	0.2	0.2	0.	

⁽a) Advance estimate (r) Revised estimate

NOTES:

Estimated measures of sampling variability are based on estimates not adjusted for seasonal variation. Additional information on confidentiality protection, sampling error, nonsampling error, sample design, and definitions may be found at

⁽r) Revised estimate

⁽¹⁾ Estimates are concurrently adjusted for seasonal variation, but not for price changes. Concurrent seasonal adjustment uses all available not adjusted estimates as input to the X-13ARIMA-SEATS program. The factors derived from the program are used in calculating all seasonally adjusted estimates shown in this table.

⁽²⁾ The 2007 North American Industry Classification System (NAICS) defines merchant wholesalers as including manufacturers' sales branches and offices. However, the estimates included in this release exclude manufacturers' sales branches and offices. Note that this is not a change in coverage from prior releases and is consistent with the description used in the Monthly Wholesale Trade Survey data products.
