# Web Survey Implementation

Innovations in Electronic Data Reporting:  
The Greenhouse Gas Emissions Project

Pamela Best and Marc Gingras  
Operations Research and Development Division  
Statistics Canada

FedCasic Workshop, March 3, 2005

Canada

# Presentation overview

---

- Project background
  - Goal
  - Partners
  - Legal framework
  - Client requirements
  - STCs background in Electronic Data Reporting
- Application
  - Tools
  - Features
- Lessons learned

# Goal

---

- To develop a harmonized, “single-window,” system for GHG emissions
- Avoid duplication and minimize reporting burden
- Phased approach
- Phase One announced March 2004
  - Emissions data collected from facilities that emit 100 kilotonnes or more of CO<sub>2</sub> equivalent
  - Deadline for reporting June 1, 2005

# Partners

---

- Reporting vehicle built by Statistics Canada
- Environment Canada
- Natural Resources Canada
- Provincial and territorial governments
- Industry stakeholders

# Legal Framework

---

- Data jointly collected by Statistics Canada
  - Statistics Act (Data sharing provision)
- Environment Canada
  - Canadian Environment Protection Act
- The Government of Alberta
  - Climate Change and Emission Management Act

# STC background in EDR

---

- First on-line survey conducted in December 2002
- Built a Public Key Infrastructure and secure network
- Developed administrative tools to manage collection and facilitate data re-integration
- Offer 37 surveys with over 60 000 respondents

# Application development tools

---

- Used the tools already in place for EDR
  - Microsoft .NET framework
  - Web pages in asp.net and Javascript
  - Customized object library
  - SQL server for collection database
  - PKI infrastructure using Entrust True Pass 7.0

# Application features

---

- On-line registration
- Save and resume
- Automated calculation of total and creation of a summary page
- Data verification
- Non-repudiation

# On-line registration

---

- No list of facilities meeting the reporting requirements
- Developed a two stage reporting process
  - Registration began February 1<sup>st</sup>
  - Reporting application available March, 2005
- Need to dynamically assign unique facility identifiers
  - Allows registration and reporting in a single session
- Security feature to prevent automated registration
- Registration information transferred to reporting application

Statistics  
Canada

Statistique  
Canada

# Save and resume

---

- Information from partially completed questionnaires encrypted and transmitted
- Encrypted information stored in a database in XML format
- Reporter resumes the session using the password *they* created
- Information is decrypted on the client's browser
- Questionnaire is repopulated

# Automatic calculation of totals

- Client side calculation of CO<sub>2</sub> equivalents using Javascript

<b>Total Stationary Combustion Emissions</b>			
	N/A	Tonnes	Tonnes (in CO <sub>2</sub> e)
Carbon dioxide (CO <sub>2</sub> )	<input type="checkbox"/>	<input type="text" value="12687"/>	12687
Methane (CH <sub>4</sub> )	<input type="checkbox"/>	<input type="text" value="235"/>	4935
Nitrous oxide (N <sub>2</sub> O)	<input type="checkbox"/>	<input type="text" value="48"/>	14880
		total:	32502

<b>Total Industrial Process Emissions</b>			
	N/A	Tonnes	Tonnes (in CO <sub>2</sub> e)
Carbon dioxide (CO <sub>2</sub> )	<input checked="" type="checkbox"/>	<input type="text"/>	
Methane (CH <sub>4</sub> )	<input type="checkbox"/>	<input type="text" value="253.8"/>	5329.8
Nitrous oxide (N <sub>2</sub> O)	<input type="checkbox"/>	<input type="text" value="42"/>	13020
		total:	18349.8

<b>Total Fugitive Emissions</b>			
	N/A	Tonnes	Tonnes (in CO <sub>2</sub> e)
Carbon dioxide (CO <sub>2</sub> )	<input type="checkbox"/>	<input type="text" value="0"/>	
Methane (CH <sub>4</sub> )	<input checked="" type="checkbox"/>	<input type="text"/>	
Nitrous oxide (N <sub>2</sub> O)	<input checked="" type="checkbox"/>	<input type="text"/>	
		total:	

# Data verification

- Reporters can review their report for missing fields

**YOUR PROGRESS**

Start End

---

**Introduction**

**Registration Info**

**I. Additional Contact Info**

**II. Parent Company Info**

**III. GHG Emissions Info**

- A. GHG Emissions •
- B. Calculation Methods
- C. Total Emissions

**IV. Comments**

**V. Confidentiality Request**

**▶ VI. Statement of Certification**

**Submit Report**

---

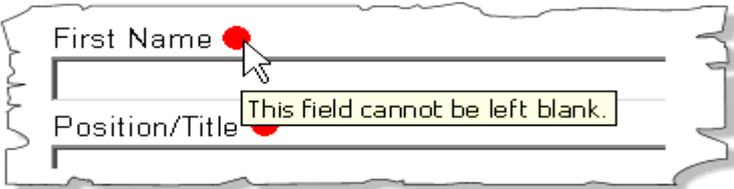

The Statement contains facility information, total GHG emissions, and the name and contact information for the Certifying Official for the report.

**Before completing the Statement of Certification:**

1. **Review** the GHG report and make any required corrections. [Review Report](#)

The red dots on the side menu indicate the pages on which there are errors or invalid values. By placing your mouse over the red dots you can get more information about what is required for the individual fields.

**Example:**

First Name •

Position/Title •

This field cannot be left blank.

2. **Print** a copy of the GHG report. [Print Report](#)  
(Clicking "Print Report" provides you with a printable version of the report.)

**To complete the Statement of Certification:**

3. **Download** the Statement of Certification (SoC). [Download SoC](#)
4. **Review** the SoC for completeness and accuracy.

# Non-repudiation

---

- PKI can support digital signatures
  - Business processes to confirm identity of reporters not in place
- Signed paper Statement of Certification used for non-repudiation in Phase One
  - Collected information transferred from application into a printable HTML page

# STATEMENT OF CERTIFICATION

For:

Facility ID : TES117

NPRI :

AB Approval No :

I hereby certify that I have reviewed the Greenhouse Gas report submitted, and have exercised due diligence to ensure that the submitted information is true and complete. The amounts and values (presented below) are accurate, based on reasonable estimates using available data.

I also acknowledge that the data will be made public.

## SUMMARY OF THE DATA SUBMITTED

<i>Greenhouse Gas</i>	<i>Total Tonnes</i>	<i>Total Tonnes (in CO<sub>2</sub>e)</i>
Carbon dioxide	CO <sub>2</sub>	CO <sub>2</sub> e
Methane	CH <sub>4</sub>	CO <sub>2</sub> e
Nitrous oxide	N <sub>2</sub> O	CO <sub>2</sub> e
Hydrofluorocarbons		CO <sub>2</sub> e
Perfluorocarbons		CO <sub>2</sub> e
Sulphur Hexafluoride	SF <sub>6</sub>	CO <sub>2</sub> e
<b>Total Emissions</b>		CO <sub>2</sub> e
Carbon dioxide from biomass	CO <sub>2</sub>	CO <sub>2</sub> e

I, \_\_\_\_\_, [Certifying Official] have the authority to bind the reporting company.

# Lessons learned

---

- Re-used as much of the existing EDR infrastructure as possible
- New development will be leveraged
- Prototype development approach
- Usability testing—two rounds
- Vulnerability—technological choices for security
  - Mitigation: Help line
  - Stakeholder involvement
  - Paper questionnaire (captured using EDR tool)
- The proof will be in the pudding (and there is always Phase Two)
