COMET Data Collection System
Agile Development

Mangala Kuppa, Agile Certified Practitioner
Office of Technology and Survey Processing

Matt Burgess, Economist
Current Employment Statistics

FedCASI C 2013
Current Employment Statistics (CES) Survey

- Monthly survey of establishments

- The survey provides employment, hours, and earnings estimates based on payroll records of business establishments.

- Employment Situation News Release
CES Facts

- Oldest Fed/State survey in the country
  - 1949: signed cooperative agreements with all 48 states and D.C.

- Largest multi-modal survey
  - Sample of ~ 145,000 (n) business and government agencies
  - 557,000 individual worksites
Collection Modes

- CES uses multiple collection modes in order to reduce respondent burden

- EDI (Electronic Data Interchange)
- CATI (Computer Assisted Telephone Interview)
- TDE (Touch-tone Data Entry)
- Mail/Fax
- Web
- Special Arrangement
Electronic Data Interchange (EDI)

- EDI: Electronic transfer of information from machine to machine.
  - Chicago EDI Center
  - Reserved for larger firms

- Advantages
  - Low monthly costs
  - Reduce respondent burden

- Disadvantage
  - The raw data comes in a format that cannot initially be used in estimation.
  - Large start-up cost
COMET EDI Tool

- COMET (Collection of Monthly Employment Totals) is a web-based system developed by the Division of Federal/State Monthly Surveys (FSMS), Office of Technology and Survey Processing (OTSP).

- The system is used by the CES EDI personnel to process raw payroll data submitted electronically by national, multi-unit firms (The raw EDI data is not submitted in a format that can initially be used in CES estimations).

- The COMET system allows for raw data to be imported into the system, aggregated to individual units within a firm, edited and screened for errors, and then transmitted for use by CES analysts.
COMET project was selected for the following reasons:

- Re-engineering mitigates one of the significant risks in using outdated FoxPro technology
- Edison system was having issues and wanted to finish re-engineering by the end of FY 2012
- SME available on board, who coded the original Edison system
- **Project will allow to try out agile principles in all phases of the SDLC**
COMET Agile Hybrid Process

- Hybrid Agile Process

FSMS followed hybrid methodology combining Scrum, XP, Kanban and best practices from RUP as well as PMBOK.
Tailored Agile Methodology used in COMET Development

3.1- Project Initiation
Max- 4 Weeks

3.2- Develop Product Backlog
Max -2 Weeks

3.3 - Release planning
Max -1 Weeks

3.4- Sprint -Max 4 weeks

Sprint planning

Backlog Grooming

Daily Standup Meetings

3.4.3- Sprint Review
Max -1 Week

3.4.4- Sprint Retrospect

3.5- Transition
Max -4 Weeks

Agile Product Backlog

- Product Backlog Elements
  - The COMET team took one week to develop product backlog and to perform release planning.
  - User story is used as a basis to discuss and further develop the story during the Sprint.

Feature Breakdown Structure
Testing in Agile Projects

Agile testing is performed throughout the development, even before code is written by way of automated test driven development.

- Releases

COMET Agile Development Timeline

Timeline
- Start - February 21, 2012
- Development Completion - September 28, 2012
- 7 Sprints including Sprint 0 (3 week sprints followed by 1 week review)

Production Rollout
- Parallel Production
  - Both Edison and COMET were used by Edi center to check results from real data
  - Month of October
- Partial Production
  - Edi center used COMET for a portion of firms
  - November/December
- Full Production
  - Edi center is using COMET for full production
  - December / January
COMET Architecture

- **Service Oriented Architecture (SOA)**
  - Login Web Service: SOA is leveraged in creating this web service with the intent to increase code reuse across heterogeneous application platforms.

- **Common Objects**
  - Implementation details are discussed on a daily basis to promote the use of common objects that can be shared across developers. Most of the common functions like database connectivity are coded as common modules for reuse.

- **Audit**
  - COMET has extensive audit feature that logs all changes to the data at a field level.
COMET Agile Development Deliverables

- COMET Deliverables
  - ✓ Product Backlog
  - ✓ Sprint Backlog
  - ✓ Burn Down Charts
  - ✓ Vision and Scope Document
  - ✓ Use Cases
  - ✓ Software Architecture Document
  - ✓ Risk List
  - ✓ Demo Each Sprint
  - ✓ SW Deployed for Chicago Feedback Each Sprint
  - ✓ Status Reports
  - ✓ Migration List (Deployment Plan)
  - ✓ Defect List
  - ✓ Lessons Learned
  - ✓ Agile Methodology Document for DSP

COMET Agile Development Results

- Number of Issues Reported To Date
  - Major Show Stoppers: 0
    - Bugs that affect the entire system and make it unusable
  - Major: 0
    - Bugs that affect a module and makes the module unusable
  - Minor: Less than 12
    - Bugs that affect a small portion of the system but do not disrupt usage of a feature/module
COMET Agile Development Results

- Customer Feedback
  - CES Program Office is very pleased with the results
  - EDI Center product owners really appreciate the ability to give input during development and pleased with the results
  - L3 users who got to use the system initially were concerned about training needs, but after 1 training session, quickly accepted the new system. (faster than expected)
