

Manufacturing and International Trade Report

Values in the Manufacturing and International Trade Report (MITR) are based on manufacturing data from the 2014 Annual Survey of Manufactures and administrative records from official U.S. import and export merchandise trade statistics. Manufacturing data for 2013 supersede the data that were previously published in the 2013 Manufacturing and International Trade Report. Data users who create their own estimates using data from this report should cite the Census Bureau as the source of the original data only.

Data Comparability

Import and export data are classified using 10-digit commodity codes based on the Harmonized System. For this release, a concordance is used to map these import and export commodity codes to 7-digit NAICS-based Product Class Codes that are used in the Economic Census and the Annual Survey of Manufactures. Where a commodity code could be mapped to more than one 7-digit NAICS-based Product Class Code, a forced concordance is used to map the commodity code to a higher-level aggregate NAICS-based Product Code, based primarily on product value and agreed upon by subject matter experts. The 2014 MITR Concordance file may be found at:

http://www.census.gov/foreign-trade/Press-Release/MITR/2014/2014_MITR_Concordance.xls

For a given NAICS-based Product Code, the Value of Product Shipments may be lower than the Domestic Export Value of Goods. This may occur for several possible reasons, including the following. First, the Domestic Export Value of Goods is not limited to manufacturers and may include exports from individuals and other business establishments, such as retailers and wholesalers. Second, there may be a lag between when a given product was manufactured and when it was exported, which may occur when a finished good is exported from an establishment's inventories. Third, the Domestic Export Value of Goods is actually the value at the U.S. seaport, airport or border port of export, based on the transaction price, which includes inland freight, insurance, and other charges incurred in placing the merchandise alongside the carrier at the U.S. port of exportation. Fourth, if a foreign good was imported and improved in value, the finished good would be considered domestic when exported, and its value would represent the transaction value (not just the value of the domestic value added).

Confidentiality

The Census Bureau has suppressed some data in this release to protect confidentiality. Title 13 United States Code, Section 9, prohibits the Census Bureau from publishing results in which an individual's or business' data can be identified. For more information on how the Census Bureau protects the confidentiality of data, see the disclosure limitation topics listed below as appropriate.

Disclosure Limitation

Disclosure limitation is the process for protecting the confidentiality of data. A disclosure of data occurs when published statistical information identifies either an individual or business that has provided information under a pledge of confidentiality. The techniques used by the Census Bureau to protect confidentiality in tabulations vary, depending on the type of data. Data in this release that are withheld to avoid disclosing data for individual companies are denoted with a 'D'. When appropriate, these data may be included in higher level totals unless disclosure also exists at the 6-digit NAICS-based Product Code.

Reliability of the Data

The data presented in this report are subject to nonsampling error. Nonsampling error can be attributed to many sources that include inability to identify all cases in the population; definition and classification difficulties; differences in respondents' interpretation of questions; errors in recording or coding the data collected; and other errors of collection, response, coverage, processing, and estimation for missing or misreported data. These errors may occur for a sample survey or a census. Most of the important operational errors were detected and corrected during the course of reviewing data for reasonableness and consistency. Though nonsampling error is not measured directly, quality control procedures are employed throughout the survey process to minimize this type of error.

Reliability of the Data continued

The sample estimates presented in this report that are produced from the Annual Survey of Manufactures are subject to sampling error. Sampling error is the difference between estimates obtained from a sample and results theoretically obtainable from a comparable complete enumeration of the sampling frame. This error results because only a subset of the sampling frame is measured in a sample survey. For an estimate produced from the Annual Survey of Manufactures and displayed in this report, its relative standard error is displayed with the estimate and is defined as the standard error of the estimate divided by the estimate. The standard error is a measure of sampling variability that may be used to define a confidence interval about its corresponding estimate with a desired level of confidence. Only one of many possible samples was selected. If confidence intervals were constructed for each of these possible samples, then it would be expected that the percentage of confidence intervals containing the result of a complete enumeration would equal the percent of the level of confidence. For example, the interval defined by a margin of error of one standard error, in which the interval is constructed one standard error below the estimate to one standard error above the estimate, approximately yields a 68-percent confidence interval; the interval defined by a margin of error of two standard errors approximately yields a 95-percent confidence interval; and the interval defined by a margin of error of two and a half standard errors approximately yields a 99-percent confidence interval.

Definitions of Terms

NAICS

The North American Industry Classification System (NAICS) provides a consistent industry classification system for economic analysis across the three North American Free Trade Agreement partners - Canada, Mexico and the United States. The structure of NAICS is hierarchical. The first two digits of the code designate the sector that represents one of 20 general categories of economic activities. The third digit designates the sub-sector, the fourth digit designates the industry group, the fifth digit designates the NAICS industry, and the sixth digit designates the national industry.

NAICS-based Product Class Codes

A detailed 7-digit NAICS-based Product Class Code combines a 6-digit NAICS-based product code with an additional seventh digit or letter that designates the product class used by the Census Bureau to identify manufactured products in the United States. An aggregate 6-digit NAICS-based Product Code consists of one or more 7-digit NAICS-based Product Class Codes.

Special NAICS-based Product Class Codes Ending in 'X' or 'XX'

The 7-digit NAICS-based Product Class Codes ending in 'X' or 'XX' represent the "undistributed" Schedule B exports and Harmonized Tariff System imports that cannot be mapped to any specific 7-digit codes, but are included in a higher level of aggregation at the 6-digit or 5-digit level. For example, commodity codes for sugar products do not differentiate between beet sugar and cane sugar. Therefore, these codes can only be mapped to the 5-digit NAICS-based product for sugar, represented by code 31131X.

Value of Product Shipments

Value of Product Shipments includes the total value of all products produced and shipped by all producers. For selected products, this can represent value of receipts, value of production, or value of work done. Industries that are published on these unique bases are separately identified in the product line description.

The manufacturing product data from the 2014 Annual Survey of Manufactures and revised 2013 data that are included in the MITR can be found in Table AM1431VS101 at:

<http://factfinder.census.gov/bkmk/table/1.0/en/ASM/2014/31VS101>

Export Values

Export values of goods are provided for both Domestic Exports and Total Exports. Total Exports is defined as the sum of Domestic and Foreign Exports. Definitions of these export values are available in the Guide to Foreign Trade Statistics, which can be found at:

<http://www.census.gov/foreign-trade/guide/sec2.html#coverage>

Import Values

Import values of goods are provided for both General Imports and Consumption Imports. Definitions of these import values are available in the Guide to Foreign Trade Statistics, which can be found at:

<http://www.census.gov/foreign-trade/guide/sec2.html#coverage>

Note: If the hyperlinks do not direct you to the source tables, copy and paste addresses directly into your web browser.

Symbols

D: Withheld to avoid disclosing data for individual companies; data are included in higher level totals where appropriate.

N: Trade and/or manufacturing data are not available or the codes are not linked in the concordance.

S: Withheld because estimate did not meet publication standards.

A: Relative standard error is 100 percent or more.

X: Not Applicable

s: Relative standard error is more than 40 percent and less than 100 percent (displayed as a superscript).

Manufacturing and International Trade Report: 2014 and 2013⁽¹⁾

In thousands of dollars. Values are based on manufacturing data from the 2014 Annual Survey of Manufactures and administrative records from official U.S. import and export merchandise trade statistics.

(1) Data for 2013 supersede the data that were previously published in the 2013 Manufacturing and International Trade Report.
