PANAMA CANAL ZONE

DISTRICTS AND PRINCIPAL TOWNS

POPULATION—PANAMA CANAL ZONE

NUMBER AND DISTRIBUTION OF INHABITANTS

Total population.—The United States acquired sovereignty over the territory now comprising the Canal Zone, by a treaty of November 18, 1903. In conformity with the act of Congress providing for the Fifteenth Census, the census of the Panama Canal Zone was taken under the supervision of the governor in accordance with plans prescribed or approved by the Director of the Census. The population on April 1, 1930, according to the Fifteenth Census, was 39,467, which represents an increase of 16,609, or 72.7 per cent, as compared with the population on January 1, 1920.

The gross area of the Panama Canal Zone, land and water, is 549 square miles, the land area, as shown in Table 2, being 379 square miles. The average number of inhabitants per square mile in 1930 was 104.1 as compared with 64 in 1920.¹

Table 1 shows the population of the Canal Zone as reported at the last two Federal censuses, and at the census of February 1, 1912, taken under the supervision of the governor, together with the increase in each period.

¹ Computed on an area of 357 square miles.

TABLE 1.—POPULATION OF PANAMA CANAL ZONE: 1912 TO 1930

[A minus sign (–) denotes decrease]

CENSUS YEAR	Population	INCREASE OVER PRECEDING CENSUS

Balboa district.....		22,107		14,360	34,711	54.7	–58.7
Cristobal district.....		17,270		8,508	28,099	103.0	–60.7

Minor civil divisions.—For purposes of enumeration, the Canal Zone was divided into two major areas, corresponding to the two divisions under the district court, Balboa district and Cristobal district. In each of these two major divisions the enumeration was made by principal towns, Army and Navy posts, institutions, and rural areas embracing all territories not otherwise specifically designated.

The Balboa district extends from the Pacific Ocean to the south bank of the Chagres River, and to the south shore of Gatun Lake from the north end of the Gaillard Cut to the Panama boundary on the east bank of the Rio Pescado. It includes the Alhajuela area, together with the west bank of the Chagres River down to the east bank of the Quebrado Madronal.

POPULATION—PANAMA CANAL ZONE

The Cristobal district is that part of the Canal Zone extending from the Caribbean Sea to the boundary of the Balboa district.

Table 3, which follows, shows the population of the Panama Canal Zone by court districts, and by towns, Army and Navy posts, institutions, and rural areas.

COMPOSITION AND CHARACTERISTICS OF THE POPULATION, AND UNEMPLOYMENT

Introduction.—This section presents the complete statistics for the population of the Panama Canal Zone classified by sex, color, age, marital condition, ability to speak English, year of immigration, mother tongue, and place of birth. Also items are shown relating to occupations and unemployment. These detailed statistics are given in some form for the two major areas, Balboa district and Cristobal district. Also, the distinction between the civilian and the military and naval population is carried through most of the classifications.

A census of agriculture was not taken for the Canal Zone in 1930. The occupation tables, however, will show a small number of gainful workers who were engaged in agricultural pursuits.

Civilian and military and naval population.—All of the inhabitants of the Panama Canal Zone living outside of military or naval reservations have been enumerated as "civilian population," and all inhabitants residing on military or naval reservations have been enumerated as "military and naval population." The population of the Canal Zone fluctuates according to the amount of work involved in the maintenance and operation of the canal, and in providing for the needs of canal and railroad employees. Table 1 shows the population of the Canal Zone in 1930 in the two major divisions, with separate figures for the civilian and the military and naval population, and with comparative figures for 1920.

Color, nativity, and sex.—In Table 2 are presented the population statistics for the Canal Zone for the last two censuses, with classification by color and sex for the entire population, by nativity and parentage for the white population, and by nativity for the Negro population. The white population is thus divided primarily into three groups: (1) Natives of native parentage—that is, having both parents born in continental United States or in the Canal Zone or other United States possession or Territory; (2) natives of foreign or mixed parentage—that is, having one or both parents born abroad; and (3) foreign born. In Table 2 and also in Table 15 for the districts, the second group is divided into two parts, namely, (a) natives of foreign parentage—that is, having both parents born abroad, and (b) natives of mixed parentage—that is,

having one parent native and the other foreign born. The Negro population is divided into two groups—native and foreign born—without respect to parentage. It has not been thought necessary to take space for the nativity and parentage classification of the "Other colored" group, since nearly all of this class of population are either foreign born or of foreign parentage. Statistics of the population classified by color, nativity, and sex are presented by court districts in Table 15.

Citizenship.—The foreign-born white population and the foreign-born Negro population are distributed in Table 2 by citizenship. This classification comprises four groups: (1) Naturalized; (2) having first papers—that is, having made formal declaration of intention to become a citizen of the United States; (3) alien; (4) unknown—that is, with status as to citizenship not reported. Citizenship is shown for the foreign-born white and foreign-born Negro population 21 years of age and over in Table 4.

Age.—The age classification in the census returns is based on age at last birthday—that is, age in completed years. The age statistics are given in considerable detail for the Canal Zone as a whole in Table 3, and for the two court districts in Table 14. In these tables the age classification is presented not only for the total population but also for the more important population classes (native white, foreign-born white, native Negro, foreign-born Negro, etc.), by sex. For comparative purposes certain figures are presented for 1920 in the age periods shown in 1930.

Table 4 shows the population 21 years of age and over classified by color, nativity, and sex, for 1930, with data for the foreign-born white and foreign-born Negro by citizenship. Statistics for males of militia age (18 to 44 years) for 1930 are also presented in this table. Similar statistics are not available for 1920.

School attendance.—The school-attendance tabulation is based on the replies to the enumerator's inquiry as to whether the person had attended school or college of any kind since September 1, 1929. The totals for the Canal Zone, 1930, are presented in Table 5 for the principal population groups separated into significant age periods. School attendance is shown for Balboa and Cristobal districts in Table 15. For comparative

POPULATION—PANAMA CANAL ZONE

purposes statistics of school attendance for the following statement for the age periods reported in civilian population, 1930 and 1920, are given in the 1920:

SCHOOL ATTENDANCE FOR THE CIVILIAN POPULATION: 1930 AND 1920

[Figures for colored include both Negro and "Other colored"]

AGE AND CENSUS YEAR	TOTAL POPULATION			WHITE			COLORED			MALE			FEMALE

Illiteracy.—The census defines as illiterate any person 10 years of age or over who is unable to read and write. The classification is based on the answers given to the enumerator in response to the question "Whether able to read and write." No specific test of ability to read and write was prescribed, but the enumerators were instructed not to return the answer

"Yes" (which would classify the person as literate) simply because a person was able to write his or her name. The statistics of illiteracy are presented for the Panama Canal Zone in Table 6, and for the districts of Balboa and Cristobal in Table 15. For comparative purposes the 1930 and 1920 figures are presented in the following statement for the age periods reported in 1920:

ILLITERACY FOR THE CIVILIAN AND MILITARY AND NAVAL POPULATION: 1930 AND 1920

[Figures for colored include both Negro and "Other colored"]

1 Figures not available.

Inability to speak English.—Table 7 shows, by sex and color, the number of persons 10 years of age and over who were reported as unable to speak the English language. Comparative figures for 1920 are presented only for the total population.

Marital condition.—The classification as to marital condition—whether single, married, widowed, or divorced—is presented for the population 15 years of age and over by sex, color, and nativity, in Table 8 for

the Canal Zone as a whole and by sex in Table 15 for Balboa and Cristobal districts. In Table 9 statistics of the marital condition of the entire population of the Canal Zone are presented by sex and by population classes separated into significant age periods. The large proportion of single males in the total population can be accounted for by the large number of soldiers, sailors, and marines in the Canal Zone.

Foreign stock by country of origin.—The foreign white stock and the foreign Negro stock, as defined by the Census Bureau, are each composed of two distinct elements—the foreign born and the native of foreign or mixed parentage. The foreign born are classified according to country of birth; the native of foreign or mixed parentage are classified according to country of birth of father, except where the father is native and the mother foreign born, and then according to country of birth of mother. All classifications of the 1930 population according to country of birth, so far as they relate to European stock, are based on the present political boundaries of European countries. As comparative figures for 1920 are not available except for the foreign born in the civilian population, they are not given in this bulletin. In addition to the summary for the Canal Zone shown in Table 10, statistics for the foreign-born white and foreign-born Negro by country of birth are presented for Balboa and Cristobal districts in Table 16, and statistics for the native white and native Negro of foreign or mixed parentage by country of birth of parents are presented in Table 17 for the same areas.

Year of immigration.—In the distribution of the foreign-born population by year of immigration the calendar year is the basis of the classification, and the date given is the year of immigration to the United States or to any of its Territories and possessions, not necessarily the year of arrival in the Panama Canal Zone. In Table 11 are presented statistics of the foreign-born population of the Panama Canal Zone by color and year of immigration.

Mother tongue.—Information as to mother tongue was secured for all persons of foreign birth. By mother tongue is meant the language usually spoken in the home of the person before coming to the United States or to any of its Territories or possessions. This inquiry and that of country of birth are so closely related that it is possible that the enumerators in some instances reported the nationality of the person rather than the mother tongue. In Table 12 are presented statistics of the mother tongue of the foreign-born population by population classes.

Place of birth of native population.—Table 13 shows the place of birth of the native population classified as to sex and color.

Gainful workers by industry groups.—Table 18 shows the population 10 years of age and over engaged in gainful occupations classified into about 35 industrial groups. (Persons usually working at a gainful occupation but temporarily unemployed at the time of the

census are included in the number of gainful workers.) The classifications of the occupations are industry or service groups, with no attempt to show specific occupations. The figures are presented for males and females, and also for white and colored workers. Similar figures, though with a somewhat condensed list of industry groups, are presented for the districts of Balboa and Cristobal in Table 19. In this table the smaller groups have been consolidated and only the more important ones are shown. Small numbers of workers may be shown in these tables for industries not carried on in the locality in which the workers were enumerated, these representing persons who usually work in the specified industries elsewhere. The specific make-up of any of the consolidated groups in Table 19 can readily be found by referring to Table 18. The most important industry in the Panama Canal Zone is transportation, due to the Panama Canal and the Panama Railroad. It should be noted, however, that the number of gainful workers reported in this industry does not represent the total number of employees of the Panama Canal and the Panama Railroad, but only those residing in the Panama Canal Zone. Persons employed in the operation and maintenance of the canal and the railroad and residing outside of the Canal Zone are not included in the census returns for the Canal Zone. The large number of persons reported in public service is accounted for by the number of soldiers, sailors, and marines stationed in the Canal Zone.

Unemployment.—The purpose of the inquiry on employment was to ascertain the amount of enforced unemployment of persons who wanted work and could not find it. The census enumerators were instructed to report as unemployed all persons out of a job on the day of enumeration who ordinarily were employed and who were able to work. All persons who were on strike, voluntarily idle, incapacitated for work, or who were on sick leave or on vacation were not reported as unemployed. School-teachers, who are often unemployed during a portion of the year, were not considered as out of a job in the sense in which the term is used for census purposes. In the Panama Canal Zone the unemployment inquiry covered all persons who usually work at a gainful occupation for salary, wages, or on commission. Table 20 shows, by industry groups for the Panama Canal Zone as a whole, the number of all such persons who were unemployed on the day of enumeration. Statistics of unemployment by periods of idleness are given in Table 21.
