UNITED STATES DEPARTMENT OF COMMERCE NEWS WASHINGTON, D.C. 20230

Robert R. Callis Linda B. Cavanaugh (301) 763-3199 BUREAU OF THE CENSUS

For Release 10:00 AM EST, February 3, 2004 CB04-07

CENSUS BUREAU REPORTS ON RESIDENTIAL VACANCIES AND HOMEOWNERSHIP

National vacancy rates in the fourth quarter 2003 were 10.2 percent in rental housing and 1.8 percent in homeowner housing, the Department of Commerce's Census Bureau announced today. The Census Bureau said that while the rental vacancy rate increased from the revised rate last year (9.3 percent), it was not different from last quarter's rate (9.9 percent). For homeowner vacancies, the current rate (1.8 percent) is lower than the rate last quarter (1.9 percent), but not different from the rate a year ago (1.7 percent).

Table 1. Rental and Homeowner Vacancy Rates for the United States: 1990 to 2003 (in percent)

^rRevised, please see page 10 for additional information.

NOTE: The estimates in this report are based on responses from a sample of the population. As with all surveys, estimates may vary from the actual values because of sampling variation or other factors. All comparisons made in this report have undergone statistical testing and are significant at the 90-percent confidence level unless otherwise noted. The data in this report are from the monthly samples of the Housing Vacancy Survey, which is a supplement to the Current Population Survey. The populations represented (the population universe) are all housing units (vacancy rates) and the civilian noninstitutionalized population of the United States (homeownership rate).

For rental housing, the suburbs (9.7 percent) had the lowest vacancy rate, while rates outside metropolitan areas (MAs) (10.6 percent) and in central cities (10.4 percent) were not different from each other. The rental vacancy rates in central cities and in the suburbs were higher than their corresponding rates in revised fourth quarter 2002, but no change occurred outside MAs for the same time period.

Similarly, the homeowner vacancy rate was also lowest in the suburbs (1.6 percent) while rates outside MAs (2.1 percent) and in central cities (2.0 percent) were not different from each other. There were no significant changes in homeowner vacancy rates for areas from the respective rates a year ago.

Among regions, the rates for rental vacancies ranked from lowest in the Northeast (6.9 percent) to 8.0 percent in the West, followed by 11.3 percent in the Midwest and highest in the South (12.9 percent). In the Northeast, the Midwest, and the West, the respective rates were higher than a year ago, while those in the South were statistically unchanged during the period.

The regional homeowner vacancy rates followed the same trend as renters, where they were lowest in the Northeast (1.1 percent) and highest in the South (2.2 percent). The Midwest (1.7 percent) and the West (1.6 percent) were not different from each other. During the past year, the homeowner vacancy rate increased in the South, while no changes occurred for the other regions.

Table 2. Rental and Homeowner Vacancy Rates by Area and Region:Fourth Quarter 2002 and 2003 (in percent)

^rRevised.

There were an estimated 121.4 million housing units in the United States in the fourth quarter 2003. Approximately 105.9 million housing units were occupied: 72.7 million by owners and 33.2 million by renters. The number of owner-occupied units increased from the revised fourth quarter 2002 estimate, while the number of renter-occupied units did not change. Of the 15.6 million vacant housing units, 11.8 million were for year-round use. Approximately 3.8 million of the year-round vacant units were for rent, 1.3 million were for sale only, and the remaining 6.7 million units were vacant for a variety of other reasons.

Table 3. Estimates of the Total Housing Inventory for the United States:Fourth Quarter 2002 and 2003

(Estimates are in thousands and may not add to total, due to rounding)

^rRevised.

NOTE: The Current Population Survey/Housing Vacancy Survey (CPS/HVS) estimates are now controlled to independent housing unit counts. This should make the CPS/HVS estimates of housing units more comparable to other Census Bureau housing surveys. Please see page 10 for additional information.

While the homeownership rate (68.6 percent) for the current quarter was higher than the revised fourth quarter 2002 rate (68.3 percent), it was not different from the rate last quarter (68.4 percent).

¹ Standard errors for quarterly homeown				

¹Standard errors for quarterly homeownership rates for the United States generally are 0.2 percent. ^rRevised. Table 4SA shows the seasonally adjusted homeownership rates for the United States from 1980 to the present. (Research has shown that seasonality for homeownership rates is present.) When adjusted for seasonality, the current homeownership rate becomes 68.5 percent, which is not different from the revised 2002 fourth quarter seasonally adjusted rate (68.2 percent), or the seasonally adjusted rate last quarter (68.3 percent).

Table 4SA.	Homeownership Rates for the United States: 1980 to 2003
	Seasonally Adjusted (in percent)

²Standard errors for quarterly homeownership rates for the United States generally are 0.2 percent.

(NA) Not Applicable; only the revised series for 1989, 1993, and 2002 were used in calculating the seasonality adjustment. 'Revised. During the fourth quarter 2003, the homeownership rate by region was highest in the Midwest (73.5 percent), while the South(70.5 percent) ranked second, the Northeast (64.7 percent) was third and the West (63.8 percent) had the lowest rate. The West increased from a year ago when it was at 62.5 percent, while the other regions did not change during the same period.

⁵For further information on each major race group and the Two or more races populations, see reports from the Census 2000 Brief series (C2KBR/01), available on the Census 2000 Web site at http://www.census.gov/population/www/cen2000/briefs.htm

⁶Standard errors for quarterly homeownership rates by race and ethnicity of householder generally are 0.2 percent for non-Hispanic White (single race) householders, 0.5 percent for Black (single race) householders, 1.0 percent for All other race householders, and 0.6 percent for Hispanic householders.

⁷The homeownership rate for fourth quarter 2003 for householders who reported the single race of Black or Black in a combination of races was 49.2 percent, compared with a rate of 49.4 percent for those who reported Black as a single race.

⁸Asian, Native Hawaiian or Other Pacific Islander, American Indian or Alaska Native (only one race reported) and Two or more races. ^rRevised. *Revised (April 22, 2004)

NOTE: Beginning in 2003, the question on race on the CPS was modified to comply with the revised standards for federal statistical agencies. Respondents may now select more than one race, but small sample sizes preclude showing all race categories. The question on Hispanic or Latino origin is asked separately, and is asked before the question on race.

For fourth quarter 2003, the homeownership rates for households with family incomes greater than or equal to the median family income (83.6 percent) and for those with incomes less than the median (52.1 percent) were not statistically different from their respective rates a year ago.

Homeownership Rates ⁹						
	Homeowne		l

Table 8. Homeownership Rates by Family Income: 1999 to 2003 (in percent)

⁹Standard errors for quarterly homeownership rates by family income generally are 0.2 percent. ¹⁰Based on families or primary individuals reporting income.

^rRevised.

Note: This press release, along with more detailed data, is available on the Internet. Our Internet address is: www.census.gov/hhes/www/hvs.html

The estimates in this release are based on a sample survey and therefore are subject to both sampling and non-sampling error. Sampling error is a result of not surveying the entire population. Non-sampling error occurs because accurate information cannot always be obtained. The standard errors provided in the tables are primarily measures of sampling error.

Standard errors are used to: 1) measure the accuracy of estimates from a sample survey, and 2) draw inferences from the survey data. For example, the standard error on the estimated rental vacancy rate of 10.2 percent is 0.2 percentage points. Consequently, the 90-percent confidence interval as shown by these data is from 9.9 percent to 10.5 percent; i.e., the interval $10.2 \pm (1.6 \times 0.2)$ percentage points. Thus, one can say with 90-percent confidence that, were it feasible to draw all possible samples, the average rental vacancy rate would be included in this confidence interval. Statements about differences are made only when the 90-percent confidence interval indicates that a statistical difference exists.

Beginning with first quarter 2003, population controls that reflect the results of Census 2000 are used in the CPS/HVS estimation process. As a final additional step in the process, the estimates are controlled to independent housing counts used for the first time in order to produce a more accurate estimate of housing units. This new procedure should make the CPS/HVS estimates of housing units more consistent with other Census Bureau housing surveys. The new housing controls affect the estimate of vacant units in the sense that the estimates of total occupied and vacant units sum to the new control total. Vacancy *rates* and homeownership *rates* are not affected by this change.

The CPS/HVS also began computing first-stage factors (used for weighting purposes) based on year-round and seasonal counts of housing units from Census 2000. From 1980 to 2002, the CPS/HVS first-stage factors were based on year-round estimates only. The effect on the data is slight and the change should improve the counts of year-round and seasonal units. For more information on the effects of these changes, please see Source and Accuracy Statement at www.census.gov/hhes/www/hvs.html.

The question on race on the CPS was modified beginning in the first quarter 2003 to comply with new standards for federal statistical agencies. Respondents may now select more than one race. The question on Hispanic or Latino origin is asked separately, and is asked before the question on race.
