## Percentage Undercount for Persons by Region in 2010

* Statistically significantly different from zero

## Percentage Net Undercount for Persons by State

No state or DC has a statistically significant undercount or overcount

## Percent Net Undercount for Persons for Counties and Places

- 100,000+ Total Population
- No county or place has a statistically significant undercount or overcount.

## Summary: Net Error

- Compared to prior censuses, the percentage undercount for 2010 was smaller.
- At the national level, there was no statistically significant undercount or overcount of people in the census.
- Classical patterns observed in past censuses were repeated in 2010
- Differentials among some of the race/Hispanic origin groups

# Components of Census Coverage: 

## For Persons

## Components of Census Coverage

2010 CCM: First time we've produced ...

## Whole-Person Census Imputations

- "Imputation" here refers to the characteristics being statistically imputed or inserted
- For over $80 \%$ of these cases (4.8 million), we know how many people lived there, but the people are missing characteristics
- For over 95\% of these cases, we know the housing unit was occupied, but the people are missing characteristics

## Components of Census Coverage in 2010 (Level, in Millions)

## Percent Undercount by Owner/Renter for Persons in 2010

## Components of Census Coverage in 2010 for Owners and Renters - Erroneous Enumerations

Bureau

Components of Census Coverage in 2010 for Owners and Renters - Whole-Person Census Imputations

## Components of Census Coverage in 2010 for Owners and Renters - Omissions

## Observations: Owner vs. Renter

- Among renters, we see higher rates of erroneous enumerations, imputations, and omissions
- For other estimation categories or subgroups, the results may partially reflect the different rates between owners and renters

# Components of Census Coverage: 

## For Persons

## Census Operations

## Census Count for Persons by Date of Mail Return

| Mail Return Date | Census Count <br> (Thousands) | Percentage |
| :--- | ---: | ---: |
| Feb. 25-March 17 | 8,065 | 3.7 |
| March 18-24 | 83,659 | 37.9 |
| March 25-31 | 65,740 | 29.8 |
| April 1-7 | 31,060 | 14.1 |
| April 8-15 | 14,990 | 6.8 |
| April 15-30 | 13,267 | 6.0 |
| May 1-Sept. 7 | 4,174 | 1.9 |

## Components of Census Coverage in 2010 by Date of Mail Return

■ Erroneous Enumerations
■ Whole-Person Census Imputations
Note: Valid Returns Only

## Observations: Date of Mail Return

- Among those who mailed the census form back to us, we see lower rates of erroneous enumeration (by a little) and imputation (by a lot), than the national average
- These error rates generally increase slightly as the weeks go by

## Census Count for Persons by Respondent Type in the Nonresponse Followup Field Operation

| Respondent Type | Census Count <br> (Thousands) | Percentage |
| :--- | ---: | ---: |
| Household Member | 61,437 | 78.4 |
| Proxy | 16,294 | 20.8 |
| Unknown Respondent Type | 589 | 0.8 |

## Components of Census Coverage in 2010 by Respondent Type in Nonresponse Followup Field Operations

## Observations: Respondent Type in NRFU

For people requiring NRFU (they did not mail a form back):

- We see much higher rates of erroneous enumeration and imputation, compared to those who mailed the form back
- Proxy responses have a higher rate of erroneous enumeration and imputation, compared to responses from a household members

## Census Count for Persons by Completion Month in the Nonresponse Followup Field Operation

| Nonresponse Followup <br> Completion Month | Census Count <br> (Thousands) | Percentage |
| :--- | ---: | ---: |
| April | 1,755 | 2.2 |
| May | 60,788 | 77.6 |
| June | 15,375 | 19.6 |
| July and August | 221 | 0.3 |
| Unknown | 181 | 0.2 |

Components of Census Coverage in 2010 by Completion Month in the Nonresponse Followup Field Operation (NRFU Field Cases Only)

## Observations: Completion Month in NRFU

Among NRFU respondents:

- The rates of erroneous enumeration and imputation are larger in June than in May
- The rate of imputation increases the longer it takes to complete the response

## Summary: Components of Census Coverage

- At the national level, we estimated 16.0 million omissions; 6.0 million of these were likely counted as census imputations.
- These omissions were offset by 10.0 million (3.3\%) erroneous enumerations (mostly duplicates) and 6.0 million imputations.
- As a whole, erroneous enumerations and imputations were lower among people who mailed back a census form.
- In NRFU, responses from proxies suffered a higher rate of errors than responses from household members; we saw more errors the later the interview was completed.

## Summary (cont.)

The value of components of coverage:

- We can quantify errors that may offset and produce a very small undercount or overcount.
- We can study results by operations and other subgroups to see where we must focus research and planning.
