

Fertilizer Materials

U.S. Department of Commerce
Economics and Statistics Administration
BUREAU OF THE CENSUS

1991

MA28B(91)-1
Issued August 1992

SUMMARY OF FINDINGS

United States production of sulfuric acid in 1991 totaled 43,349.9 thousand short tons (100 percent H_2SO_4), approximately 2 percent below the 1990 figure of 44,336.9 thousand short tons. Value of shipments (including interplant transfers) in 1991 amounted to \$583 million, as compared with the 1990 value of \$589.4 million.

Value of shipments of synthetic ammonia, nitric acid, and ammonium compounds decreased 1 percent to \$2,495.4 million in 1991 from the 1990 level of \$2,519.9 million. Shipments of urea increased 13 percent to \$722.6 million in 1991, and shipments of phosphoric acid decreased about .5 percent to \$1,220.1 million.

Production of superphosphate and other phosphatic fertilizer materials for 1991 decreased 1 percent to 8,906.3 thousand short tons (100 percent P_2O_5). Value of shipments amounted to \$2,810.6 million in 1991, as compared with the 1990 value of \$2,711.2 million.

The statistics in this report are based on surveys of producers of sulfuric acid and fertilizer materials. The figures represent total production and shipments by U.S. manufacturers of fertilizer materials. Estimates are included for companies whose reports were not received in time for tabulation.

A description of the survey methodology and related information appears on page 11.

Table 1. SHIPMENTS AND PRODUCTION OF PRINCIPAL FERTILIZER MATERIALS: 1987 TO 1991

(Quantity in thousands of short tons; value in millions of dollars)

^F Revised by 5 percent or more from previously published figures. (X) Not applicable.

¹ Excludes data for byproduct ammonia liquor and ammonium sulfate published by the Department of Energy.

² Represents total amount of original solution produced, including amounts used for fertilizer, explosives, and other uses and amounts consumed in manufacturing other products such as nitrogen solutions (product code 28731 55).

Address inquiries concerning these figures to U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233, or call John P. Miller, (301), 763-7807.

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

DESCRIPTION OF SURVEY

Scope of Survey. This survey covers establishments producing inorganic fertilizer chemicals, phosphatic fertilizer materials, and sulfuric acid, except spent sulfuric acid recovered by hydrolysis or evaporation.

Survey Methodology. The statistics in this publication were collected by mail on Bureau of the Census annual Form MA28B, Inorganic Fertilizer Materials and Related Products. The survey panel includes all known producers of inorganic fertilizer materials, phosphatic fertilizer materials, and sulfuric acid, approximately 250 establishments.

Reliability of Data. Survey error may result from several sources: (1) inability to obtain information about all cases in the survey; (2) response errors; (3) definitional difficulties; (4) differences in the interpretation of questions; (5) mistakes in recording or coding the data obtained; and (6) other errors of collection, response, coverage, and estimation for missing data. These nonsampling errors also occur in complete censuses. Although no direct measurement of the biases due to nonsampling errors has been obtained, precautionary steps were taken in all phases of the collection, processing, and tabulation of the data in an effort to minimize their influence.

A major source of bias in the published estimates is due to imputing data for nonrespondents, for late reporters, and for data which failed logic edits. Missing figures are imputed based on yearly movements shown by reporting firms. Imputation generally is limited to a maximum of 5 percent for any one data cell. Figures with imputation rates greater than 5 percent are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual yearly movements for nonrespondents may or may not closely agree with the imputed movements. The range of difference between the actual and imputed figures is not precisely known, but is assumed to be small. The degree of uncertainty regarding the accuracy of the published data, however, increases as the percentage of imputation increases. Figures with imputation rates above 5 percent should be used with caution.

Revisions to Previous Period Data. Statistics for previous years may be revised as the result of corrected data from respondents, including the receipt of late reports for which imputations were made as described above. Figures which have been revised by more than 5 percent from previously published figures are indicated by footnotes.

Adjustment for Price Change. All dollar figures included in this publication are in current dollars; i.e., they have not been adjusted for price change.

EXPLANATION OF TERMS

Quantity and Value of Shipments. The figures on quantity and value of shipments represent physical shipments of all products sold, transferred to other establishments of the same company, or shipped on consignment, whether for domestic or export sale. The value represents the net sales price, f.o.b. plant, to the customer or branch to which the products are shipped, net of discounts, allowances, freight charges, and returns. Shipments to a company's own branches are assigned the same value as comparable sales to unaffiliated customers; i.e., the value includes an appropriate allocation of company overhead and profit. Products bought and resold without further manufacture are excluded.

Production. Data shown for production represent total quantity of each product produced, including quantity consumed in the plant or sold or transferred to other plants or warehouses of the same company. Products produced under toll agreements are reported by the establishment which owns raw material from which the products are produced. The data provide a measure of total production, but do not necessarily indicate amounts entering the market since, in some cases, figures are included for material produced as an intermediate process in the production of other end products.

Consumption. Consumption data includes only quantities produced and consumed in the same plant.

Sulfuric Acid. Represents quantities produced from all sources which are available for sale except for the amounts recovered by processes other than fortification. Includes amounts produced from the oxidation of sulfur or sulfur bearing material and from the decomposition of spent acids. Excludes sulfuric acid recovered by hydrolysis and evaporation and intermediate production where sulfuric acid is not withdrawn from the system.

Spent Acid. Sulfuric acid that has been used in manufacturing processes, such as metal treating on crude oil processing, and is reduced in strength or purity. This includes sludge acid, alkylation acid, and other spent acids.

Fortified Spent Acid. Spent acid that has been strengthened by the addition of sulfur trioxide in contact units.

Decomposed Spent Acid. Spent acid, typically alkylation and sludge acids, that has been decomposed to sulfur dioxide through thermal processes.

Normal and Enriched Superphosphates. All grades containing less than 40 percent available phosphoric oxide (P_2O_5).

Concentrated (Triple) Superphosphates. Grades containing 40 percent or more phosphoric oxide (P_2O_5).

Ammonium Phosphates. Includes a group of nitrogen-phosphorous materials monoammonium phosphates and diammonium phosphates, mixtures of the two, or combinations with ammonium nitrate or ammonium sulfate. Ammonium polyphosphate is also included.

Monoammonium Phosphates. Chemically processed nitrogen-phosphorous materials containing 50 percent or more primary nutrients and having a phosphate to nitrogen ratio of 3 to 1 or greater.

Diammonium Phosphates. Chemically processed nitrogen-phosphorous materials comprising fertilizer grades containing 18 to 21 percent nitrogen (N), and 46 to 54 percent phosphoric oxide (P_2O_5).

Other Ammonium Phosphates. Chemically processed nitrogen-phosphorous materials, solid and fluid, including mixtures of monoammonium, diammonium, and ammonium sulfate. Excludes ammonium phosphate produced in combination with potash salts to make a complete mixture.

Other Phosphatic Fertilizer Materials. Chemically processed materials such as ammonium phosphate potash mixtures, nitrophosphates, calcium metaphosphates, sodium phosphates, wet base goods made by treating phosphate rock and some organic nitrogenous material with sulfuric acid.

COMPARISON OF EXPORT, IMPORT, AND DOMESTIC OUTPUT DATA

The trade comparisons shown in this report should be considered only as approximations. Several problems prevent precise comparisons among imports, exports, and domestic output. These problems include the following:

- Export and import comparisons do not account for the origin of materials used to manufacture the finished product. Domestic output includes any goods that undergo substantial transformation into a finished product in the U.S., even if the goods are partially constructed abroad or are constructed of imported materials.
- There will be a lag between the time a producer makes or ships a product and the time it is actually exported. Similarly, there may be a lag between the time a product is imported and when it enters into U.S. distribution channels.

- The basic structures of these classification systems differ. The Standard Industrial Classification (SIC) system used for domestic output was developed independently of the Harmonized System (HS) used to classify imports and exports. The level of detail provided by the different systems varies substantially, reflecting their different objectives. For example, there are a number of imported commodities that have no comparable domestic output classification.
- Because producers' shipments of some commodities may be used as materials for incorporation into other commodities, combinations of domestic output data for such commodities may contain some duplication.
- Import and export data reflect the movement of merchandise into and out of U.S. foreign trade zones, the U.S. Virgin Islands, and the U.S. customs territory of the 50 States, the District of Columbia, and Puerto Rico. Domestic output reflects activity in the 50 States and, only if specified, in Puerto Rico.
- Import and export data generally do not distinguish between new, used or rebuilt commodities.
- The valuations of the three data sets differ. Domestic output is valued at the point of production. It includes the net sales price, f.o.b. plant, after discounts and allowances, and excludes freight charges and excise taxes. Exports are valued at the point of exportation. Export value includes the net sales price or value, and inland freight, insurance and other charges to the export point. Imports are valued at the first port of entry in the United States. They include the cost, insurance, freight, duty, and other charges to the import point.
- Detailed commodity information is not included for individual export or import shipments at or below a certain dollar limit. This dollar limit is \$2,500 for exports and \$1,250 for imports, except for import of textiles and textile products, gloves, footwear, and miscellaneous rubber and plastics products, where the limit is \$250.

HISTORICAL NOTE

Data on inorganic fertilizer chemicals and sulfuric acid have been collected by the Bureau of the Census since 1941. Historical data may be obtained from Current Industrial Reports (called Facts for Industry before 1959) available at your local Federal Depository Library. A list of these libraries may be obtained from the Bureau of the Census regional offices:

Office	Telephone
Atlanta, Georgia	404-730-3833
Boston, Massachusetts	617-565-7100

Charlotte, North Carolina	704-344-6142
Chicago, Illinois	312-353-6251
Dallas, Texas	214-767-0621
Denver, Colorado	303-969-6750
Detroit, Michigan	313-354-4654
Kansas City, Kansas	913-236-3728
Van Nuys, California	818-904-6339
New York, New York	212-264-4730
Philadelphia, Pennsylvania	215-597-8313
Seattle, Washington	206-728-5314

Historical data are also available on microfiche. For further information contact the Bureau of the Census, Data User Services Division, 301-763-4100.

RELATIONSHIP BETWEEN MQ28B AND MA28B

Data on production of inorganic fertilizer chemicals, phosphatic fertilizer materials, and sulfuric acid are published quarterly in MQ28B, *Fertilizer Materials*. Although the product descriptions are the same on the quarterly and annual surveys, the statistics shown in the annual report may differ from those published in the quarterly report for the following reasons:

Figures supplied by the same company may differ for the two reports even though the product descriptions and reporting basis are the same.

The quarterly figures received from many firms are estimated since book records are frequently not available. These data sometimes differ significantly from reported annual data for the same establishments.

For establishments reporting on the annual survey but not on the quarterly the quarterly data are estimated. The sum of these quarterly estimates may vary substantially from actual data. Where these discrepancies between the quarterly and annual figures occur, the quarterly data are adjusted by a method which preserves the quarter-to-quarter trend while correcting the level. These revised quarterly data are shown in tables 6 and 7.

ACKNOWLEDGMENTS

This report was prepared in the Industry Division, Bureau of the Census, under the direction of Judy Dodds Chief, Current Nondurables Branch, and Nathaniel Shelton, Chief, Chemicals, Lumber, Clay and Glass Section. John P. Miller was directly responsible for the review of the data and preparation of the report. Roger H. Bugenhagen, Acting Chief of the Division, and Robert N. Tinari, Assistant Chief for Current Industrial Reports, provided overall direction and coordination to this project.
