**Table 1. Products Statistics: 2002 and 1997—Con.**

[Includes quantity and value of products produced by (1) establishments classified in the NAICS industry that matches the first six digits of the product code (primary products), and (2) establishments classified in other industries (secondary products). Transfers of products from one establishment of a company to another establishment of the same company (interplant transfers) are also included. Data based on the 2002 Economic Census. Differences between the 1997 data shown and comparable data in Table 3 of this report are due to revisions made during the Annual Survey of Manufactures (ASM) review. For information on confidentiality protection, nonsampling error, and explanation of terms, see note 2 at end of table. For meaning of abbreviations and symbols, see introductory text]

**Table 1. Products Statistics: 2002 and 1997—Con.**

[Includes quantity and value of products produced by (1) establishments classified in the NAICS industry that matches the first six digits of the product code (primary products), and (2) establishments classified in other industries (secondary products). Transfers of products from one establishment of a company to another establishment of the same company (interplant transfers) are also included. Data based on the 2002 Economic Census. Differences between the 1997 data shown and comparable data in Table 3 of this report are due to revisions made during the Annual Survey of Manufactures (ASM) review. For information on confidentiality protection, nonsampling error, and explanation of terms, see note 2 at end of table. For meaning of abbreviations and symbols, see introductory text]

Product code	Product	Number of companies with shipments of \$100,000 or more	Quantity of production for all purposes	Product shipments

**Table 1. Products Statistics: 2002 and 1997—Con.**

[Includes quantity and value of products produced by (1) establishments classified in the NAICS industry that matches the first six digits of the product code (primary products), and (2) establishments classified in other industries (secondary products). Transfers of products from one establishment of a company to another establishment of the same company (interplant transfers) are also included. Data based on the 2002 Economic Census. Differences between the 1997 data shown and comparable data in Table 3 of this report are due to revisions made during the Annual Survey of Manufactures (ASM) review. For information on confidentiality protection, nonsampling error, and explanation of terms, see note 2 at end of table. For meaning of abbreviations and symbols, see introductory text]

Product code	Product	Number of companies with shipments of \$100,000 or more	Quantity of production for all purposes	Product shipments

**Table 1. Products Statistics: 2002 and 1997—Con.**

[Includes quantity and value of products produced by (1) establishments classified in the NAICS industry that matches the first six digits of the product code (primary products), and (2) establishments classified in other industries (secondary products). Transfers of products from one establishment of a company to another establishment of the same company (interplant transfers) are also included. Data based on the 2002 Economic Census. Differences between the 1997 data shown and comparable data in Table 3 of this report are due to revisions made during the Annual Survey of Manufactures (ASM) review. For information on confidentiality protection, nonsampling error, and explanation of terms, see note 2 at end of table. For meaning of abbreviations and symbols, see introductory text]

Product code	Product	Number of companies with shipments of \$100,000 or more	Quantity of production for all purposes	Product shipments	
				Quantity	Value (\$1,000)
336330	Motor vehicle steering and suspension component (except spring) manufacturing—Con.

**Table 1. Products Statistics: 2002 and 1997—Con.**

[Includes quantity and value of products produced by (1) establishments classified in the NAICS industry that matches the first six digits of the product code (primary products), and (2) establishments classified in other industries (secondary products). Transfers of products from one establishment of a company to another establishment of the same company (interplant transfers) are also included. Data based on the 2002 Economic Census. Differences between the 1997 data shown and comparable data in Table 3 of this report are due to revisions made during the Annual Survey of Manufactures (ASM) review. For information on confidentiality protection, nonsampling error, and explanation of terms, see note 2 at end of table. For meaning of abbreviations and symbols, see introductory text]

**Table 1. Products Statistics: 2002 and 1997—Con.**

[Includes quantity and value of products produced by (1) establishments classified in the NAICS industry that matches the first six digits of the product code (primary products), and (2) establishments classified in other industries (secondary products). Transfers of products from one establishment of a company to another establishment of the same company (interplant transfers) are also included. Data based on the 2002 Economic Census. Differences between the 1997 data shown and comparable data in Table 3 of this report are due to revisions made during the Annual Survey of Manufactures (ASM) review. For information on confidentiality protection, nonsampling error, and explanation of terms, see note 2 at end of table. For meaning of abbreviations and symbols, see introductory text]

**Table 1. Products Statistics: 2002 and 1997—Con.**

[Includes quantity and value of products produced by (1) establishments classified in the NAICS industry that matches the first six digits of the product code (primary products), and (2) establishments classified in other industries (secondary products). Transfers of products from one establishment of a company to another establishment of the same company (interplant transfers) are also included. Data based on the 2002 Economic Census. Differences between the 1997 data shown and comparable data in Table 3 of this report are due to revisions made during the Annual Survey of Manufactures (ASM) review. For information on confidentiality protection, nonsampling error, and explanation of terms, see note 2 at end of table. For meaning of abbreviations and symbols, see introductory text]

Product code	Product	Number of companies with shipments of \$100,000 or more	Quantity of production for all purposes	Product shipments	
				Quantity	Value (\$1,000)
336415	Guided missile and space vehicle propulsion unit and propulsion unit parts manufacturing—Con.

**Table 1. Products Statistics: 2002 and 1997—Con.**

[Includes quantity and value of products produced by (1) establishments classified in the NAICS industry that matches the first six digits of the product code (primary products), and (2) establishments classified in other industries (secondary products). Transfers of products from one establishment of a company to another establishment of the same company (interplant transfers) are also included. Data based on the 2002 Economic Census. Differences between the 1997 data shown and comparable data in Table 3 of this report are due to revisions made during the Annual Survey of Manufactures (ASM) review. For information on confidentiality protection, nonsampling error, and explanation of terms, see note 2 at end of table. For meaning of abbreviations and symbols, see introductory text]

Product code	Product	Number of companies with shipments of \$100,000 or more	Quantity of production for all purposes	Product shipments

**Table 1. Products Statistics: 2002 and 1997—Con.**

[Includes quantity and value of products produced by (1) establishments classified in the NAICS industry that matches the first six digits of the product code (primary products), and (2) establishments classified in other industries (secondary products). Transfers of products from one establishment of a company to another establishment of the same company (interplant transfers) are also included. Data based on the 2002 Economic Census. Differences between the 1997 data shown and comparable data in Table 3 of this report are due to revisions made during the Annual Survey of Manufactures (ASM) review. For information on confidentiality protection, nonsampling error, and explanation of terms, see note 2 at end of table. For meaning of abbreviations and symbols, see introductory text]

**Table 1. Products Statistics: 2002 and 1997—Con.**

[Includes quantity and value of products produced by (1) establishments classified in the NAICS industry that matches the first six digits of the product code (primary products), and (2) establishments classified in other industries (secondary products). Transfers of products from one establishment of a company to another establishment of the same company (interplant transfers) are also included. Data based on the 2002 Economic Census. Differences between the 1997 data shown and comparable data in Table 3 of this report are due to revisions made during the Annual Survey of Manufactures (ASM) review. For information on confidentiality protection, nonsampling error, and explanation of terms, see note 2 at end of table. For meaning of abbreviations and symbols, see introductory text]

**Table 1. Products Statistics: 2002 and 1997—Con.**

[Includes quantity and value of products produced by (1) establishments classified in the NAICS industry that matches the first six digits of the product code (primary products), and (2) establishments classified in other industries (secondary products). Transfers of products from one establishment of a company to another establishment of the same company (interplant transfers) are also included. Data based on the 2002 Economic Census. Differences between the 1997 data shown and comparable data in Table 3 of this report are due to revisions made during the Annual Survey of Manufactures (ASM) review. For information on confidentiality protection, nonsampling error, and explanation of terms, see note 2 at end of table. For meaning of abbreviations and symbols, see introductory text]

**Table 1. Products Statistics: 2002 and 1997—Con.**

[Includes quantity and value of products produced by (1) establishments classified in the NAICS industry that matches the first six digits of the product code (primary products), and (2) establishments classified in other industries (secondary products). Transfers of products from one establishment of a company to another establishment of the same company (interplant transfers) are also included. Data based on the 2002 Economic Census. Differences between the 1997 data shown and comparable data in Table 3 of this report are due to revisions made during the Annual Survey of Manufactures (ASM) review. For information on confidentiality protection, nonsampling error, and explanation of terms, see note 2 at end of table. For meaning of abbreviations and symbols, see introductory text]

**Table 1. Products Statistics: 2002 and 1997—Con.**

[Includes quantity and value of products produced by (1) establishments classified in the NAICS industry that matches the first six digits of the product code (primary products), and (2) establishments classified in other industries (secondary products). Transfers of products from one establishment of a company to another establishment of the same company (interplant transfers) are also included. Data based on the 2002 Economic Census. Differences between the 1997 data shown and comparable data in Table 3 of this report are due to revisions made during the Annual Survey of Manufactures (ASM) review. For information on confidentiality protection, nonsampling error, and explanation of terms, see note 2 at end of table. For meaning of abbreviations and symbols, see introductory text]

**Table 1. Products Statistics: 2002 and 1997—Con.**

[Includes quantity and value of products produced by (1) establishments classified in the NAICS industry that matches the first six digits of the product code (primary products), and (2) establishments classified in other industries (secondary products). Transfers of products from one establishment of a company to another establishment of the same company (interplant transfers) are also included. Data based on the 2002 Economic Census. Differences between the 1997 data shown and comparable data in Table 3 of this report are due to revisions made during the Annual Survey of Manufactures (ASM) review. For information on confidentiality protection, nonsampling error, and explanation of terms, see note 2 at end of table. For meaning of abbreviations and symbols, see introductory text]

**Table 1. Products Statistics: 2002 and 1997—Con.**

[Includes quantity and value of products produced by (1) establishments classified in the NAICS industry that matches the first six digits of the product code (primary products), and (2) establishments classified in other industries (secondary products). Transfers of products from one establishment of a company to another establishment of the same company (interplant transfers) are also included. Data based on the 2002 Economic Census. Differences between the 1997 data shown and comparable data in Table 3 of this report are due to revisions made during the Annual Survey of Manufactures (ASM) review. For information on confidentiality protection, nonsampling error, and explanation of terms, see note 2 at end of table. For meaning of abbreviations and symbols, see introductory text]

**Table 1. Products Statistics: 2002 and 1997—Con.**

[Includes quantity and value of products produced by (1) establishments classified in the NAICS industry that matches the first six digits of the product code (primary products), and (2) establishments classified in other industries (secondary products). Transfers of products from one establishment of a company to another establishment of the same company (interplant transfers) are also included. Data based on the 2002 Economic Census. Differences between the 1997 data shown and comparable data in Table 3 of this report are due to revisions made during the Annual Survey of Manufactures (ASM) review. For information on confidentiality protection, nonsampling error, and explanation of terms, see note 2 at end of table. For meaning of abbreviations and symbols, see introductory text]

Product code	Product	Number of companies with shipments of \$100,000 or more	Quantity of production for all purposes	Product shipments

**Table 1. Products Statistics: 2002 and 1997—Con.**

[Includes quantity and value of products produced by (1) establishments classified in the NAICS industry that matches the first six digits of the product code (primary products), and (2) establishments classified in other industries (secondary products). Transfers of products from one establishment of a company to another establishment of the same company (interplant transfers) are also included. Data based on the 2002 Economic Census. Differences between the 1997 data shown and comparable data in Table 3 of this report are due to revisions made during the Annual Survey of Manufactures (ASM) review. For information on confidentiality protection, nonsampling error, and explanation of terms, see note 2 at end of table. For meaning of abbreviations and symbols, see introductory text]

<sup>53</sup>The definition of this industry has changed from 1997. See Industry Series report EC02311-339111, Laboratory Apparatus and Furniture Manufacturing, Appendix B for an explanation of the changes.

## Table 1. **Products Statistics: 2002 and 1997—Con.**

Note 1: For some establishments, data have been estimated from central unit values that are based on quantity-value relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: p-10 to 19 percent estimated; q-20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by S.

Note 2: The data in this table are based on the 2002 Economic Census. To maintain confidentiality, the Census Bureau suppresses data to protect the identity of any business or individual. The census results in this table contain nonsampling errors. Data users who create their own estimates using data from American FactFinder tables should cite the Census Bureau as the source of the original data only. For explanation of terms, see Appendix A. For full technical documentation, see Appendix C.

**Table 2. Product Class Shipments for Selected States: 2002 and 1997**

[Product class data are omitted from the table if (1) the state accounts for less than \$2 million, (2) the data would disclose operations of individual companies in 2002, or (3) the data are miscellaneous or "not specified by kind" (nsk). Data based on the 2002 Economic Census. For information on confidentiality protection, nonsampling error, explanation of terms, see note at end of table. For meaning of abbreviations and symbols, see introductory text]

<sup>1</sup>Description of relative standard error of estimate is given in Appendix C. Percentage standard errors shown are relative standard errors of estimates of level.

Note: The data in this table are based on the 2002 Economic Census and the 2002 Annual Survey of Manufactures (ASM). To maintain confidentiality, the Census Bureau suppresses data to protect the identity of any business or individual. The census and ASM results in this table contain sampling errors and nonsampling errors. Data users who create their own estimates using data from American FactFinder tables should cite the Census Bureau as the source of the original data only. For explanation of terms, see Appendix A. For full technical documentation, see Appendix C.

**Table 4. Products Primary to More Than One Industry - Quantity and Value of Shipments by Product Class: 2002**

[Product codes that include an "XX" are nonstandard codes used to present totals of products' primary relationships. These totals include data of more than one 7-digit product class or 10-digit product. The 7-digit codes presented in this table include all products of the product class regardless of whether they are primary to more than one industry. The portion primary to more than one industry may be determined from the 10-digit product codes. Data based on the 2002 Economic Census. For information on confidentiality protection, nonsampling error, and explanation of terms, see note 2 at end of table. For meaning of abbreviations and symbols, see introductory text]

Product code	Product	Product shipments	
		Quantity	Value (\$1,000)
311XXAA	Pork, processed or cured, not canned or made into sausage	X	7 482 517
311611G	Pork, processed or cured, not canned or made into sausage, made in slaughtering plants	X	2 253 712
3116121	Pork, processed or cured, not canned or made into sausage, made from purchased carcasses	X	5 228 805

313XXDDAAA	Finished manmade fiber and silk broadwoven print cloth, made of 85 percent or more spun yarn—Con.		
3133115111	Broadwoven fabrics, manmade fiber and silk, print cloth, 85 percent or more spun yarn, finished in finishing mills	X	41 505
313XXDDBBB	Finished manmade fiber and silk broadwoven fabrics, plain weave (excluding print cloth), made of 85 percent or more spun yarn	X	848 887
313210P143	Broadwoven fabrics, manmade fiber and silk, plain weave (except print cloth), 85 percent or more spun yarn, finished in weaving mills	X	96 513
3133115251	Broadwoven fabrics, manmade fiber and silk, plain weave (except print cloth), 85 percent or more spun yarn, finished in finishing mills	X	752 374
313XXDDCCC	Finished manmade fiber and silk broadwoven fabrics, twill weave (excluding pile), made of 85 percent or more spun yarn	X	52 686
313210P151	Broadwoven fabrics, manmade fiber and silk, twill weave (except pile), 85 percent or more spun yarn, finished in weaving mills	X	36 191
3133115351	Broadwoven fabrics, manmade fiber and silk, twill weave (except pile), 85 percent or more spun yarn, finished in finishing mills	X	16 495
313XXDDEEE	Finished manmade fiber and silk broadwoven fabrics, other weaves, made of 85 percent or more spun yarn	X	401 503
313210P159	Broadwoven fabrics, manmade fiber and silk, other weaves, 85 percent or more spun yarn, finished in weaving mills	X	27 652
3133115911	Broadwoven fabrics, manmade fiber and silk, other weaves, 85 percent or more spun yarn, finished in finishing mills	X	373 851
313XXDDFFF	Finished manmade fiber and silk broadwoven pile fabrics (including velvets, plushes, and corduroys), made of 85 percent or more spun yarn	X	134 418
313210P181	Broadwoven fabrics, manmade fiber and silk, pile (including velvets, plushes, and corduroys), 85 percent or more spun yarn, finished in weaving mills	X	57 367
3133115681	Broadwoven fabrics, manmade fiber and silk, pile (including velvets, plushes, and corduroys), 85 percent or more spun yarn, finished in finishing mills	X	77 051
313XXDDGGG	Finished polyester broadwoven fabrics, made of 85 percent or more filament yarn	X	773 053
313210P1B1	Broadwoven fabrics, polyester, 85 percent or more filament yarn, finished in weaving mills	X	290 708
3133115791	Broadwoven fabrics, polyester, 85 percent or more filament yarn, finished in finishing mills	X	482 345
313XXDDHHH	Other finished manmade fiber and silk broadwoven fabrics, made of 85 percent or more filament yarn	X	557 234
313210P1D5	Broadwoven fabrics, other manmade fiber and silk, 85 percent or more filament yarn, finished in weaving mills	X	308 205
31331158A1	Broadwoven fabrics, manmade fiber and silk, other types, 85 percent or more filament yarn, finished in finishing mills	X	249 029
313XXDDJJJ	Other finished manmade fiber and silk broadwoven fabrics (including combinations of spun and filament yarns, blends with wool, silk, and blends with silk)	X	155 531
313210P1F1	Broadwoven fabrics, all other manmade fiber and silk (including combinations of spun and filament yarns, blends with wool, silk, and blends with silk), finished in weaving mills	X	97 901
31331158F1	Broadwoven fabrics, manmade fiber and silk, all other types (including combinations of spun and filament yarns, blends with wool, silk, and blends with silk), finished in finishing mills	X	57 630
315XXAA	Men's and boys' knit dress and sport shirts (including polo, tank tops, sweat and t-shirts)	X	1 536 360
3151917	Shirts, dress and sport (including polo, tank tops, sweat and t-shirts), knit, men's and boys', made in knitting mills	X	454 825
3152231	Men's and boys' knit dress and sport shirts (including polo, tank tops, sweat and t-shirts), made from purchased fabrics	X	1 081 535
315XXAABBB	Men's and boys' knit dress and sport shirts (including polo, tank tops, sweat and t-shirts)	X	1 536 360
3151917200	Shirts, dress and sport (including polo, tank tops, sweat and t-shirts), knit, men's and boys', made in knitting mills	X	454 825
3152231100	Men's and boys' knit dress and sport shirts (including polo, tank tops, sweat and t-shirts), made from purchased fabrics	X	1 081 535
315XXBB	Men's and boys' knit underwear, nightwear, and robes (including thermal, undershirts, undershorts and briefs, and woven boxer shorts)	X	584 383
3151921	Underwear, nightwear, and robes, men's and boys', knit, made in knitting mills	X	338 232
3152210	Men's and boys' knit underwear, nightwear, and robes, made from purchased fabrics	X	246 151
315XXBBAAA	Men's and boys' knit underwear, nightwear, and robes (including thermal, undershirts, undershorts and briefs, and woven boxer shorts)	X	584 383
3151921100	Underwear, nightwear, and robes (including thermal, undershirts, undershorts and briefs, and woven boxer shorts), men's and boys', knit, made in knitting mills	X	338 232
3152210100	Men's and boys' knit underwear, nightwear, and robes (including thermal, undershirts, undershorts and briefs, and woven boxer shorts), made from purchased fabrics	X	246 151
315XXCC	Women's, girls', and infants' knit underwear and nightwear	X	2 487 346
3151924	Underwear and nightwear, women's, girls', and infants', knit, made in knitting mills	X	434 039
3152311	Women's and girls' underwear, except foundation garments, made from purchased fabrics	X	367 037
3152313	Women's and girls' nightwear, except robes, made from purchased fabrics	X	256 728
3152315	Women's and girls' brassieres, bra-lettes, and bandeaux, made from purchased fabrics	X	1 065 703
3152318	Women's and girls' corsets (except surgical), girdles, and combinations, made from purchased fabrics	X	56 450
3152319	Women's and girls' robes and dressing gowns, made from purchased fabrics	X	66 783
3152910	Infants' apparel, made from purchased fabrics	X	240 606
315XXCCAAA	Women's, girls', and infants' knit underwear, including foundation garments	X	1 744 516
31519241100	Underwear, including foundation garments, women's, girls', and infants', knit, made in knitting mills	X	241 961
3152311100	Women's and girls' underwear, including slips and teddies (except foundation garments), made from purchased fabrics	X	367 037
3152315100	Women's and girls' brassieres, bra-lettes, and bandeaux, made from purchased fabrics	X	1 065 703
3152318100	Women's and girls' corsets (except surgical), girdles, and combinations, made from purchased fabrics	X	56 450
3152910110	Infants' underwear, made from purchased fabrics	X	13 365
315XXCCBBB	Women's, girls', and infants' knit nightwear, including robes	X	572 200
31519241200	Nightwear, including robes, women's, girls', and infants', knit, made in knitting mills	X	192 078
3152313100	Women's and girls' nightwear, except robes, made from purchased fabrics	X	256 728
3152319100	Women's and girls' robes and dressing gowns, made from purchased fabrics	X	66 783

See footnotes at end of table.

**Table 4. Products Primary to More Than One Industry - Quantity and Value of Shipments by Product Class: 2002—Con.**

[Product codes that include an "X" are nonstandard codes used to present totals of products' primary relationships. These totals include data of more than one 7-digit product class or 10-digit product. The 7-digit codes presented in this table include all products of the product class regardless of whether they are primary to more than one industry. The portion primary to more than one industry may be determined from the 10-digit product codes. Data based on the 2002 Economic Census. For information on confidentiality protection, nonsampling error, and explanation of terms, see note 2 at end of table. For meaning of abbreviations and symbols, see introductory text]

Product code	Product	Product shipments	
		Quantity	Value (\$1,000)
322XXBB	Sanitary tissue paper products—Con.		
322XXBBDDD	Toilet tissue, retail packages, rolls and ovals, facial tissue type, two-ply or more—Con.		
322121N31	Paper, toilet tissue, retail packages, rolls and ovals, facial tissue type, two-ply or more, made in paper mills	1,000 s tons . . . . .	S 3 544 136
3222915331	Toilet tissue, retail packages, rolls and ovals, facial tissue type, two-ply or more, made from purchased sanitary paper stock or wadding	1,000 s tons . . . . .	P185 738.0 373 511 D
322XXBBEEE	Toilet tissue, retail packages, rolls and ovals, regular type, single-ply		X
322121N433	Paper, toilet tissue, retail packages, rolls and ovals, regular type, single-ply, made in paper mills	1,000 s tons . . . . .	S 803 473
3222915433	Toilet tissue, retail packages, rolls and ovals, regular type, single-ply, made from purchased sanitary paper stock or wadding	1,000 s tons . . . . .	D D 2 645 702
322XXBBFFF	Paper towels, industrial packages (rolled, folded, and interfolded)		X
322121N661	Paper, towels, industrial packages (rolled, folded, and interfolded), made in paper mills	1,000 s tons . . . . .	S 2 223 767
3222915661	Paper towels, industrial packages (rolled, folded, and interfolded), made from purchased sanitary paper stock or wadding	1,000 s tons . . . . .	P265 258.0 421 935
322XXBBGGG	Paper towels, retail packages (rolled, folded, and interfolded)		X
322121N701	Paper, towels, retail packages (rolled, folded, and interfolded), made in paper mills	1,000 s tons . . . . .	S 2 106 632
3222915701	Paper towels, retail packages (rolled, folded, and interfolded), made from purchased sanitary paper stock or wadding	1,000 s tons . . . . .	S 695 102
322XXBBHHH	Other sanitary paper products (including industrial packaged toilet tissue (all types), paper wipers (except nonwoven), absorbent pads, etc.)		X
322121N901	Paper, sanitary tissue products, other types (toilet (industrial packaged, all types), paper wipers (except nonwoven), absorbent pads, etc.), made in paper mills	1,000 s tons . . . . .	S 826 988
3222915901	Other sanitary paper products (including industrial packaged toilet tissue (all types), paper wipers (except nonwoven), absorbent pads, etc.), made from purchased sanitary paper stock or wadding	1,000 s tons . . . . .	S 1 392 586
324XXAA	Petroleum lubricating oils and greases		X 7 758 070
324110G	Petroleum lubricating oils and greases, made in a refinery		X 1 332 180
3241910	Petroleum lubricating oils and greases, made from refined petroleum		X 6 425 890
324XXAABBB	Lubricating oils (including hydraulic fluids, quenching and cutting oils, transformer oils, liquid rust preventives, etc.)		X 6 327 735
324110G111	Lubricating oils (including hydraulic fluids, quenching and cutting oils, transformer oils, liquid rust preventives, etc.), made in a refinery	mil bbl . . . . .	Q23 820.0 1 226 922
3241910111	Lubricating oils (including hydraulic fluids, quenching and cutting oils, transformer oils, liquid rust preventives, etc.), made from refined petroleum	mil bbl . . . . .	S 5 100 813
324XXAACCC	Lubricating greases		X 849 259
324110G121	Lubricating greases, made in a refinery	mil bbl . . . . .	S 105 258
3241910121	Lubricating greases, made from refined petroleum	mil bbl . . . . .	S 744 001
324XXBB	Liquefied refinery gases (aliphatics)		X 14 711 543
324110P	Liquefied refinery gases (aliphatics), made in a refinery		X 6 548 475
3251104	Liquefied refinery gases (aliphatics), made in petrochemical plants		X 8 163 068
324XXBBAAA	Liquefied refinery gases (aliphatics), for use as a chemical raw material		X 11 642 667
324110P111	Liquefied refinery gases (aliphatics), for use as a chemical raw material, made in a refinery		X 3 757 270
3251104111	Liquefied refinery gases (aliphatics), for use as a chemical raw material, made in petrochemical plants		X 7 885 397
324XXBBCCC	Liquefied refinery gases (aliphatics), for other uses		X 3 068 876
324110P121	Liquefied refinery gases (aliphatics), for other uses, made in a refinery		X 2 791 205
3251104121	Liquefied refinery gases (aliphatics), for other uses, made in petrochemical plants		X 277 671
324XXDD	Other finished petroleum products, including waxes		X 9 006 808
324110T	Other finished petroleum products, including waxes, made in a refinery		X 7 695 467
3241992	All other petroleum and coal products (excluding coke oven products), made in coke oven establishments		X 1 311 341
324XXDDAAA	Microcrystalline petroleum waxes		X 296 297
324110T191	Microcrystalline petroleum waxes, made in a refinery	mil bbl . . . . .	1 158.0 81 741
3241992211	Microcrystalline petroleum waxes, made from refined petroleum	mil bbl . . . . .	S 214 556
324XXDDBBB	Crystalline petroleum waxes		X 500 732
324110T1A1	Fully refined crystalline petroleum waxes, made in a refinery	mil bbl . . . . .	Q1 861.0 140 562
324110T1B1	Other crystalline petroleum waxes, made in a refinery	mil bbl . . . . .	Q3 558.0 143 023
3241992221	Crystalline petroleum waxes, made from refined petroleum	mil bbl . . . . .	S 217 147
325XXAA	Mixed fertilizers		X 2 997 357
3253127	Mixed fertilizers, made in plants which manufacture fertilizer materials		X 219 998
3253140	Mixed fertilizers, mixing only		X 2 777 359
325XXAABBB	Mixed fertilizers, dry, shipped in packages, tablets, and similar forms, gross weight less than or equal to 22 lb (10 kg)		X 1 051 769
3253127111	Mixed fertilizers, dry, shipped in packages, tablets, and similar forms, gross weight less than or equal to 22 lb (10 kg), made in plants which manufacture fertilizer materials	1,000 s tons . . . . .	S 9 865
3253140111	Mixed fertilizers, dry, shipped in packages, tablets, and similar forms, gross weight less than or equal to 22 lb (10 kg), mixing only	1,000 s tons . . . . .	S 1 041 904
325XXAACCC	Mixed fertilizers, dry, shipped in bulk		X 486 611
3253127121	Mixed fertilizers, dry, shipped in bulk, made in plants which manufacture fertilizer materials	1,000 s tons . . . . .	S 120 069
3253140121	Mixed fertilizers, dry, shipped in bulk, mixing only	1,000 s tons . . . . .	S 366 542
325XXAADDD	Mixed fertilizers, dry, shipped in bags, gross weight of 22 lb (10 kg) or more		X 378 813
3253127131	Mixed fertilizers, dry, shipped in bags, gross weight of 22 lb (10 kg) or more, made in plants which manufacture fertilizer materials	1,000 s tons . . . . .	S 54 475
3253140131	Mixed fertilizers, dry, shipped in bags, gross weight of 22 lb (10 kg) or more, mixing only	1,000 s tons . . . . .	S 324 338
325XXAAEEE	Mixed fertilizers, liquid		X 314 428
3253127141	Mixed fertilizers, liquid, made in plants which manufacture fertilizer materials	1,000 s tons . . . . .	Q312 320.0 35 589
3253140241	Mixed fertilizers, liquid, mixing only	1,000 s tons . . . . .	S 278 839
327XXAA	Other glass products		X 7 165 341
3272114	Other glass products, made by flat glass producers		X 683 748
327215B	Other glass products, made from purchased glass		X 6 481 593
327XXAABBB	Tempered glass for construction, architectural, and automotive purposes		X 2 330 435
3272114121	Tempered glass for construction, architectural, and automotive purposes, made by flat glass producers		X 327 458
327215B111	Tempered glass for construction, architectural, and automotive purposes, made from purchased glass		X 2 002 977
327XXAACCC	Tempered glass for other uses (including appliances)		X D

**Table 4. Products Primary to More Than One Industry - Quantity and Value of Shipments by Product Class: 2002—Con.**

[Product codes that include an "X" are nonstandard codes used to present totals of products' primary relationships. These totals include data of more than one 7-digit product class or 10-digit product. The 7-digit codes presented in this table include all products of the product class regardless of whether they are primary to more than one industry. The portion primary to more than one industry may be determined from the 10-digit product codes. Data based on the 2002 Economic Census. For information on confidentiality protection, nonsampling error, and explanation of terms, see note 2 at end of table. For meaning of abbreviations and symbols, see introductory text.]

Product code	Product	Product shipments	
		Quantity	Value (\$1,000)
331XXEE	Cold finished steel bars and bar shapes—Con.		
331111F	Cold finished steel bars and bar shapes, made in steel mills producing hot rolled bars and bar shapes	X	629 132
3312213	Cold finished steel bars and bar shapes, made from purchased steel	X	1 113 176
331XXEEAAA	Cold finished steel bars and bar shapes	X	1 742 308
331111F100	Cold finished steel bars and bar shapes, made in steel mills producing hot rolled bars and bar shapes	X	629 132
3312213100	Cold finished steel bars and bar shapes, made from purchased steel	X	1 113 176
331XXFF	Seamless rolled ring forgings, ferrous	X	373 229
331111H	Seamless rolled ring forgings, ferrous, made in steel mills	X	75 703
3321115	Seamless rolled ring forgings, ferrous, made from purchased iron and steel	X	297 526
331XXFFAAA	Seamless carbon steel and alloy steel rolled ring forgings (excluding stainless and hi-temperature)	X	238 952
331111H101	Seamless carbon steel and alloy steel rolled ring forgings (excluding stainless and hi-temperature), made in steel mills	X	58 719
3321115101	Seamless carbon steel and alloy steel rolled ring forgings (excluding stainless and hi-temperature), made from purchased iron and steel	X	180 233
331XXFFBBB	Seamless stainless steel and hi-temperature (iron, nickel, or cobalt-base alloy) rolled ring forgings	X	134 277
331111H203	Seamless stainless steel and hi-temperature (iron, nickel, or cobalt-base alloy) rolled ring forgings, made in steel mills	X	16 984
3321115106	Seamless stainless steel and hi-temperature (iron, nickel, or cobalt-base alloy) rolled ring forgings, made from purchased iron and steel	X	117 293
331XXGG	Open die and smith forgings (hammer and press), ferrous	X	710 869
331111J	Open die and smith forgings (hammer and press), ferrous, made in steel mills	X	182 850
3321117	Open die and smith forgings (hammer and press), ferrous, made from purchased iron and steel	X	528 019
331XXGGAAA	Carbon and alloy steel open die and smith forgings (hammer and press), excluding stainless and hi-temperature	X	560 010
331111J101	Carbon and alloy steel open die and smith forgings (hammer and press), excluding stainless and hi-temperature, made in steel mills	X	148 711
3321117101	Carbon and alloy steel open die and smith forgings (hammer and press), excluding stainless and hi-temperature, made from purchased iron and steel	X	411 299
331XXGGBBB	Stainless steel and hi-temperature (iron, nickel, or cobalt-base alloy) open die and smith forgings (hammer and press)	X	150 859
331111J203	Stainless steel and hi-temperature (iron, nickel, or cobalt-base alloy) open die and smith forgings (hammer and press), made in steel mills	X	34 139
3321117106	Stainless steel and hi-temperature (iron, nickel, or cobalt-base alloy) open die and smith forgings (hammer and press), made from purchased iron and steel	X	116 720
331XXHH	Noninsulated ferrous wire rope, cable, forms, and strand	X	1 403 395
3312221	Noninsulated ferrous wire rope, cable, and fabricated wire rope assemblies (including lifting slings), made in plants that draw wire	X	868 100
3326181	Noninsulated ferrous wire rope, cable, forms, and strand, made from purchased wire	X	535 295
331XXHHAAA	Noninsulated ferrous wire rope, cable, and fabricated wire rope assemblies (including lifting slings)	X	723 172
3312221101	Noninsulated ferrous wire forms and strand (including strand for prestressed concrete, composite wire strand (except ACSR), and guard rail cable), made in plants that draw wire	X	443 425
3326181102	Noninsulated ferrous wire rope, cable, and fabricated wire rope assemblies (including lifting slings), made from purchased wire	X	279 747

331492B221	Other secondary lead- and tin-base alloys, including type metal	X	34 769
331492B301	Secondary nonferrous superalloys (superior heat and creep resistant alloys)	X	D
331492B313	Other secondary refined nonferrous metals and alloys (including nickel, tin, cadmium, antimony, cobalt, molybdenum, titanium sponge, etc.)	X	D

Note 1: For some establishments, data have been estimated from central unit values that are based on quantity-value relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: p-10 to 19 percent estimated; q-20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by S.

Note 2: The data in this table are based on the 2002 Economic Census. To maintain confidentiality, the Census Bureau suppresses data to protect the identity of any business or individual. The census results in this table contain nonsampling errors. Data users who create their own estimates using data from American FactFinder tables should cite the Census Bureau as the source of the original data only. For explanation of terms, see Appendix A. For full technical documentation, see Appendix C.

## Explanation of Terms

---

### **PRODUCT CODES AND CLASSES OF PRODUCTS**

North American Industry Classification System (NAICS) United States industries are identified by a six-digit code. The longer code accommodates the large number of sectors and allows more flexibility in designing subsectors. Each product or service is assigned a ten-digit code. The product coding structure represents an extension by the Census Bureau of the six-digit industry classifications of the manufacturing and mining sectors. The classification system operates so that the industrial coverage is progressively narrower with the successive addition of digits.

As in previous censuses, data were collected for most industries on the quantity and value of individual products shipped. Since the 1997 census programs, information is collected on the output of almost 10,000 individual product items.

In the manufacturing sector for 2002, there are 21 subsectors (three-digit NAICS), 86 industry groups (four-digit NAICS), 184 NAICS industries (five-digit NAICS) that are comparable with Canadian and Mexican classification, and 473 U.S. industries (six-digit NAICS). Product classes and products of the manufacturing industries have been assigned codes based on the industry from which they originate. There are 1,450 product classes (seven-digit codes), 5,674 census products, and an additional 3,746 ten-digit product codes. The ten-digit products are considered the primary products of the industry with the same first six digits.

The list of products for which separate information was collected was prepared after consultation with industry and government representatives.

Comparability with previous figures was given considerable weight in the selection of product categories, so that comparable 1992 information is presented for most products.

Typically, both quantity and value of shipments information were collected. However, if quantity was not significant or could not be reported by manufacturers, only value of shipments was collected.

Shipments include both commercial shipments and transfers of products to other plants of the same company. For industries in which a considerable portion of the total shipments is transferred to other plants of the same company, separate information on interplant transfers also was collected. Moreover, for products that are used to a large degree within the same establishment as materials or components in the fabrication of other products, total production and often consumption of the item within the plant (quantity produced and consumed) was collected. Typically, the information on production also was collected for products for which there are significant differences between total production and shipments in a given year because of wide fluctuations in finished goods inventories. Other measures of output of products with long production cycles were used as appropriate and feasible.

## Methodology

---

### SOURCES OF THE DATA

The manufacturing sector includes approximately 350,000 establishments. This number includes those industries in the North American Industry Classification System (NAICS) definition of manufacturing. The amount of information requested from manufacturing establishments was dependent upon a number of factors. The more important considerations were the size of the company and whether it was included in the Annual Survey of Manufactures (ASM).

Establishments in the 2002 Economic Census are divided into those sent report forms and those not sent report forms. The coverage of and the method of obtaining census information from each are described below:

1. Establishments sent a report form:

- a. ASM sample establishments. This group accounts for approximately 15 percent of all manufacturing establishments. The ASM panel covers all the units of large manufacturing establishments, as well as a sample of the medium and smaller establishments. The probability of selection was proportionate to size. For more information, see the Description of the ASM Survey Sample.

In an economic census year, the ASM report form (MA-10000) replaces the first page of the regular census form for those establishments included in the ASM. In addition to information on employment, payroll, and other items normally requested on the regular census form, establishments in the ASM sample were requested to supply additional information on gross book value of assets and capital expenditures. ASM establishments were also requested to provide information on retirements, depreciation, rental payments, and supplemental labor costs. For establishments not included in the ASM, these additional items were estimated using relationships observed in the ASM establishment data. The census statistics for these variables are a sum of the ASM establishment data and the estimated data for non-ASM establishments. ASM establishments were also requested to provide information for selected purchased services. The census statistics for the purchased service items were derived solely from the ASM establishments. See Appendix A. Explanation of Terms, for an explanation of these items. The census part of the report form is 1 of 220 versions containing product, material, and special inquiries. The diversity of manufacturing activities necessitated the use of this many forms to canvass the 473 manufacturing industries. Each form was developed for a group of related industries.

Appearing on each form was a list of products primary to the group of related industries, as well as secondary products and miscellaneous services that establishments classified in these industries were likely to perform. Respondents were requested to identify the products, the value of each product, and, in certain cases, the quantity of the product shipped during the survey year. Space also was provided for the respondent to describe products not specifically identified on the form.

The report form also contained a materials-consumed inquiry, which varied from form to form depending on the industries being canvassed. The respondents were asked to review a list of materials generally used in their production processes. From this list, each establishment was requested to identify those materials consumed during the survey year, the cost of each, and, in certain cases, the quantity consumed. Once again, space was provided

---

for the respondent to describe significant materials not listed on the form.

A wide variety of special inquiries were included to measure activities peculiar to a given industry, such as operations performed and equipment used.

- b. Large and medium establishments (non-ASM). Approximately 30 percent of all manufacturing establishments were included in this group. A variable cutoff, based on administrative-record payroll data and determined on an industry-by-industry basis, was used to select those establishments that were to receive 1 of the 220 economic census — manufacturing regular forms. The first page, requesting establishment data for items such as employment and payroll, was standard but did not contain the detailed statistics included on the ASM form. The product, material, and special inquiry sections supplied were based on the historical industry classification of the establishment.
- c. Small single-establishment companies (non-ASM). This group includes approximately 15 percent of all manufacturing establishments. For those industries where application of the variable cutoff for administrative-record cases resulted in a large number of small establishments being included in the mail canvass, an abbreviated “short form” was used. These establishments received 1 of the 31 versions of the short form, which requested summary product and material data and totals but no details on employment, payroll, cost of materials, inventories, and capital expenditures.

Use of the short form has no adverse effect on published totals for the industry statistics, because the same data were collected on the short form as on the long form. However, detailed information on products and materials consumed was not collected on the short form; thus, its use would increase the value of the “not specified by kind” (nsk) categories.

## 2. Establishments not sent a report form:

- a. Small single-establishment companies not sent a report form. Approximately 40 percent of the manufacturing establishments were small single-establishment companies that were excused from filing a census report. Selection of these establishments was based on two factors: annual payroll and the Census Bureau’s ability to assign the correct six-digit NAICS industry classification to the establishment. For each six-digit NAICS industry code, an annual payroll cutoff was determined. These cutoffs were derived so that the establishments with payroll less than the cutoff were expected to account for no more than 3 percent of the value of shipments for the industry. Generally, all single-establishment companies with less than 5 employees were excused, while all establishments with more than 20 employees were mailed forms. Establishments below the cutoff that could not be directly assigned a six-digit NAICS code were mailed a classification report that requested information for assigning NAICS industry codes. Establishments below the cutoff that could be directly assigned a six-digit NAICS code were excused from filing any report. For below cutoff establishments, information on the physical location, payroll, and receipts was obtained from the administrative records of other federal agencies under special arrangements that safeguarded their confidentiality.

Estimates of data for these small establishments were developed using industry averages in conjunction with the administrative information. The value of shipments and cost of materials were not distributed among specific products and materials for these establishments, but were included in the product and material “not specified by kind” (nsk) categories.

The industry classification codes included in the administrative-record files were assigned on the basis of brief descriptions of the general activity of the establishment. As a result, an indeterminate number of establishments were erroneously coded to a six-digit NAICS industry. This was especially true whenever there was a relatively fine line of demarcation between industries or between manufacturing and nonmanufacturing activity.

Sometimes the administrative-record cases had only two- or three-digit NAICS group classification codes available in the files. For manufacturing, these establishments were sent a

---

separate classification form, which requested information on the products and services of the establishment. This form was used to code many of these establishments to the appropriate six-digit NAICS level. Establishments that did not return the classification form were coded later to those six-digit NAICS industries identified as “All other” industries within the given subsector.

As a result of these situations, a number of small establishments may have been misclassified by industry. However, such possible misclassification has no significant effect on the statistics, other than on the number of companies and establishments.

The total establishment count for individual industries should be viewed as an approximation rather than a precise measurement. The counts for establishments with 20 employees or more are far more reliable than the count of total number of establishments.

- b. All nonemployers, i.e., all firms subject to federal income tax, with no paid employees, during 2002 are excluded as in previous censuses. Data for nonemployers are not included in this report, but are released in the annual *Nonemployer Statistics* series.

The report forms used to collect information for establishments in this sector are available at [help.econ.census.gov/econhelp/resources/](http://help.econ.census.gov/econhelp/resources/).

A more detailed examination of census methodology is presented in the *History of the Economic Census* at [www.census.gov/econ/www/history.html](http://www.census.gov/econ/www/history.html).

## **INDUSTRY CLASSIFICATION OF ESTABLISHMENTS**

The classifications for all establishments covered in the 2002 Economic Census — Manufacturing are classified in 1 of 473 industries in accordance with the industry definitions in the *North American Industry Classification System (NAICS), United States, 2002* manual. There were no changes between the 2002 edition and the 1997 edition affecting this sector. When applicable, Appendix F of this report shows the product class and product comparability between the two systems for data in this report.

In the NAICS system, an industry is generally defined as a group of establishments that have similar production processes. To the extent practical, the system uses supply-based or production-oriented concepts in defining industries. The resulting group of establishments must be significant in terms of number, value added by manufacture, value of shipments, and number of employees.

The coding system works in such a way that the definitions progressively become narrower with successive additions of numerical digits. In the manufacturing sector for 2002, there are 21 subsectors (three-digit NAICS), 86 industry groups (four-digit NAICS), 184 NAICS industries (five-digit NAICS) that are comparable with Canadian and Mexican classification, and 473 U.S. industries (six-digit NAICS). Product classes and products of the manufacturing industries have been assigned codes based on the industry from which they originate. There are 1,450 product classes (seven-digit codes), 5,674 census products, and an additional 3,746 ten-digit product codes. The ten-digit products are considered the primary products of the industry with the same first six digits.

For the 2002 Economic Census — Manufacturing, all establishments were classified in particular industries based on the products they produced. If an establishment made products of more than one industry, it was classified in the industry with the largest product value. For 2002, there were no “resistance rules” or “frozen industries.”

In ASM years, establishments included in the ASM sample with certainty weights are reclassified by industry only if the change in the primary activity from the prior year is significant or if the change has occurred for 2 successive years. This procedure prevents reclassification when there are minor shifts in product mix.

In ASM years, establishments included in the ASM sample with noncertainty weight are not shifted from one industry classification to another. They are retained in the industry where they were classified in the base census year. However, in the following census year, these ASM plants are allowed to shift from one industry to another.

---

The results of these rules covering the switching of plants from one industry classification to another are that some industries comprise different mixes of establishments in different survey years. Hence, comparisons between prior-year and current-year published totals, particularly at the six-digit NAICS level, should be viewed with caution. This is particularly true for the comparison between the data shown for a census year versus the data shown for the previous ASM year.

As previously noted, the small establishments that may have been misclassified by industry are usually administrative-record cases whose industry codes were assigned on the basis of incomplete descriptions of the general activity of the establishment. Such possible misclassifications have no significant effect on the statistics other than on the number of companies and establishments.

Establishments frequently make products classified both in their industry (primary products) and other industries (secondary products). Industry statistics (employment, payroll, value added by manufacture, value of shipments, etc.) reflect the activities of the establishments that may make both primary and secondary products. Product statistics, however, represent the output of all establishments without regard for the classification of the producing establishment. For this reason, when relating the industry statistics, especially the value of shipments, to the product statistics, the composition of the industry's output should be considered.

The extent to which industry and product statistics may be matched with each other is measured by the primary product specialization ratio and the coverage ratio. The primary product specialization ratio is the proportion of industry shipments accounted for by the primary products of establishments classified in the industry. The coverage ratio is the proportion of product shipments accounted for by establishments classified in the industry.

#### **ESTABLISHMENT BASIS OF REPORTING**

The 2002 Economic Census — Manufacturing is conducted on an establishment basis. A company operating at more than one location is required to file a separate report for each location or establishment. The ASM also is conducted on an establishment basis, but separate reports are filed for just those establishments selected in the sample. Companies engaged in distinctly different lines of activity at one location are requested to submit separate reports, if the plant records permit such a separation and if the activities are substantial in size.

In 2002, as in earlier years, a minimum size limit was set for inclusion of establishments in the census. All establishments employing one person or more at any time during the census year are included. The same size limitation has applied since 1947 in censuses and annual surveys of manufactures. In the 1939 and earlier censuses, establishments with less than \$5,000 value of products were excluded. The change in the minimum size limit in 1947 does not appreciably affect the historical comparability of the census figures, except for data on number of establishments for a few industries.

The 2002 Economic Census — Manufacturing excludes data for central administrative offices (CAOs). These would include separately operated administrative offices, warehouses, garages, and other auxiliary units that service manufacturing establishments of the same company. These data are published in a separate report series.

#### **DESCRIPTION OF THE ASM SURVEY SAMPLE**

The ASM sample is drawn for the second survey year after a census. The most recent sample was drawn for the 1999 survey year based on the 1997 Economic Census — Manufacturing. This sample will be in place through the 2003 ASM.

In 1997, there were approximately 370,000 individual manufacturing establishments. For sample efficiency and cost considerations, the establishments in the 1997 manufacturing population were partitioned into two components for developing estimates within the ASM. The details of each are described below:

1. Mail stratum. The mail stratum of the survey is comprised of larger single-location manufacturing companies and all manufacturing establishments of multiunit companies (companies

---

that operate at more than one physical location). Approximately 200,000 of the 370,000 establishments in the 1997 census were assigned to the mail stratum. On an annual basis, the mail stratum is supplemented with larger, newly active single-location companies identified from a list provided by the Internal Revenue Service (IRS) and new manufacturing locations of multiunit companies identified from the Census Bureau's Company Organization Survey (COS).

For the 1999 survey, a new sample of approximately 58,000 individual establishments was selected from the mail stratum assembled from the 1997 census. Supplemental samples representing both 1998 and 1999 births (newly active establishments that were not included in the 1997 census) were also selected. Establishments selected for the sample are mailed an ASM survey questionnaire for each year through 2003.

The 1999-2003 ASM sample design is similar to the one used since 1984. Companies in the 1997 Economic Census — Manufacturing with manufacturing shipments of at least \$500 million were defined as company certainties. For these large companies, each manufacturing establishment is included in the mail sample. For the 1999-2003 sample, there are approximately 500 certainty companies collectively accounting for over 18,000 establishments.

For the remaining portion of the mail component of the survey, the establishment was defined as the sample unit. All establishments with 250 employees or more were defined as employment certainties. Across these arbitrary certainty classes, there were approximately 25,000 establishments included in the sample with certainty. Collectively, these certainty establishments accounted for approximately 80 percent of the total value of shipments in the 1997 Economic Census — Manufacturing.

Smaller establishments in the remaining portion of the mail stratum were sampled with probabilities ranging from .02 to 1.00. The initial probabilities of selection assigned to these establishments were proportionate to a measure-of-size determined for each establishment. The measure-of-size was a function of the establishment's 1997 industry classification and its 1997 product class data. For each product class (1,755) and six-digit industry (473), a desired reliability constraint was specified. Using a technique developed by Dr. James R. Chromy of the Research Triangle Institute, the initial establishment probabilities were optimized such that the expected sample satisfied all industry and product class reliability constraints, while the sample size was minimized. This technique reduces the likelihood of selecting nonrepresentative samples for individual product classes or industries.

This method of assigning probabilities based on product class shipments is motivated by the Census Bureau's primary desire to produce reliable estimates of both product class and industry shipments. The high correlation between shipments and employment, value-added, and other general statistics assures that these variables will also be well represented by the sample. The actual sample selection procedure uses an independent chance of selection method (Poisson sampling) that permits us to prevent small establishments from being selected in consecutive samples without introducing a bias into the survey estimates.

2. Nonmail stratum. The initial nonmail component of the survey was comprised of approximately 170,000 small, single-establishment companies that were tabulated as administrative records in the 1997 Economic Census — Manufacturing. The nonmail stratum is also supplemented annually using the list of newly active single-location companies provided by the Internal Revenue Service (IRS) and payroll cutoffs. Companies with payroll below the payroll cutoff are added to the nonmail stratum. For this portion of the population, sampling is not used. The data for this group are estimated based on selected information obtained annually from the administrative records of the IRS and Social Security Administration (SSA). This administrative information, which includes payroll, total employment, industry classification, and physical location, is obtained under conditions which safeguard the confidentiality of both tax and census records.

## **RELIABILITY OF DATA**

All data compiled in the economic census are subject to nonsampling errors. Nonsampling errors can be attributed to many sources during the development or execution of the census. The following are two ways that further explain this method: ASM Estimating Procedure. Most of the ASM

---

estimates derived for the mail stratum are computed using a difference estimator. At the establishment level, there is a strong correlation between the current-year data values and the corresponding 1997 (base) data values. Therefore, within the mailed stratum, for each item at each level of aggregation, an estimate of the “difference” between the current year and the base year is computed from sample cases and added to the corresponding base-year values. For the 1998-2002 ASM estimates, the 1997 Economic Census — Manufacturing values serve as the base year. For the 2003 ASM, the base will be updated to be the 2002 Economic Census — Manufacturing.

Due to the positive year-to-year correlation, estimates derived using this methodology are generally more reliable than comparable estimates developed from the current sample data alone. Estimates for the capital expenditures variables are not generated using the difference estimator because the year-to-year correlations are considerably weaker. The standard linear estimator is used for these variables.

For the nonmail stratum, estimates for payroll and employment are directly tabulated from the administrative-record data provided by IRS and SSA. Estimates of data other than payroll and employment are developed from industry averages. Although the nonmail stratum contained approximately 170,000 individual establishments in 1999, it accounts for less than 2 percent of the estimate for total value of shipments at the total manufacturing level.

Corresponding estimates for the mail and nonmail components are combined to produce the estimates included in this publication. ASM Data Qualifications. The estimates developed from the sample are apt to differ somewhat from the results of a survey covering all companies in the sample lists, but otherwise conducted under essentially the same conditions as the actual sample survey. The estimates of the magnitude of the sampling errors (the difference between the estimates obtained and the results theoretically obtained from a comparable, complete-coverage survey) are provided by the standard errors of estimates.

The particular sample selected for the ASM is one of many similar probability samples that, by chance, might have been selected under the same specifications. Each of the possible samples would yield somewhat different sets of results, and the standard errors are measures of the variation of all the possible sample estimates around the theoretically comparable, complete-coverage values.

Estimates of the standard errors have been computed from the sample data for selected ASM statistics in this report. They are represented in the form of relative standard errors (the standard errors divided by the estimated values to which they refer).

In conjunction with its associated estimate, the relative standard error may be used to define confidence intervals (ranges that would include the comparable, complete-coverage value for specified percentages of all the possible samples).

The complete-coverage value would be included in the range:

- From one standard error below to one standard error above the derived estimate for about two-thirds of all possible samples.
- From two standard errors below to two standard errors above the derived estimate for about 19 out of 20 of all possible samples.
- From three standard errors below to three standard errors above the derived estimate for nearly all samples.

An inference that the comparable, complete-survey result would be within the indicated ranges would be correct in approximately the relative frequencies shown. Those proportions, therefore, may be interpreted as defining the confidence that the estimates from a particular sample would differ from complete-coverage results by as much as one, two, or three standard errors, respectively.

---

For example, suppose an estimated total is shown at 50,000 with an associated relative standard error of 2 percent, that is, a standard error of 1,000 (2 percent of 50,000). There is approximately 67 percent confidence that the interval 49,000 to 51,000 includes the complete-coverage total, about 95 percent confidence that the interval 48,000 to 52,000 includes the complete-coverage total, and almost certain confidence that the interval 47,000 to 53,000 includes the complete-coverage total.

In addition to the sample errors, the estimates are subject to various response and operational errors: errors of collection, reporting, coding, transcription, imputation for nonresponse, etc. These operational errors also would occur if a complete canvass were to be conducted under the same conditions as the survey. Explicit measures of their effects generally are not available. However, it is believed that most of the important operational errors were detected and corrected during the Census Bureau's review of the data for reasonableness and consistency. The small operational errors usually remain. To some extent, they are compensating in the aggregated totals shown. When important operational errors were detected too late to correct the estimates, the data were suppressed or were specifically qualified in the tables.

As derived, the estimated standard errors included part of the effect of the operational errors. The total errors, which depend upon the joint effect of the sampling and operational errors, are usually of the order of size indicated by the standard error, or moderately higher. However, for particular estimates, the total error may considerably exceed the standard errors shown. Any figures shown in the tables in this publication having an associated standard error exceeding 15 percent may be combined with higher level totals, creating a broader aggregate, which then may be of acceptable reliability.

#### **DUPLICATION IN COST OF MATERIALS AND VALUE OF SHIPMENTS**

Data for cost of materials and value of shipments include varying amounts of duplication, especially at higher levels of aggregation. This is because the products of one establishment may be the materials of another. The value added statistics avoid this duplication and are, for most purposes, the best measure for comparing the relative economic importance of industries and geographic areas.

#### **VALUE OF INDUSTRY SHIPMENTS COMPARED WITH VALUE OF PRODUCT SHIPMENTS**

The 2002 Economic Census — Manufacturing shows value of shipments data for industries and products. In the industry statistics tables and files, these data represent the total value of shipments of all establishments classified in a particular industry. The data include the shipments of the products classified in the industry (primary to the industry), products classified in other industries (secondary to the industry), and miscellaneous receipts (repair work, sale of scrap, research and development, installation receipts, and resales). Value of product shipments shown in the products statistics tables and files represent the total value of all products shipped that are classified as primary to an industry regardless of the classification of the producing establishment.

#### **DISCLOSURE**

In accordance with federal law governing census reports (Title 13 of the United States Code), no data are published that would disclose the operations of an individual establishment or company. However, the number of establishments in a specific industry or geographic area is not considered a disclosure; therefore, this information may be released even though other information is withheld. Techniques employed to limit disclosure are discussed at [www.census.gov/epcd/ec02/disclosure.htm](http://www.census.gov/epcd/ec02/disclosure.htm).

The disclosure analysis for the industry statistics files is based on the total value of shipments. When the total value of shipments cannot be shown without disclosing information for individual companies, the complete line is suppressed except for capital expenditures. Nonetheless, the suppressed data are included in higher-level totals. A separate disclosure analysis is performed for capital expenditures, which can be suppressed even though value of shipments data are published.
